UNIVERSITY OF CALIFORNIA

STATE OF CALIFORNIA)
COUNTY OF KINGS)
CITY OF AVENAL)

I, Nina Garza, City Clerk of the City of Avenal, do hereby certify that the foregoing Resolution No. 2005-51 is a true and correct copy and has been duly and regularly adopted by the Avenal City Council on August 11, 2005. Said copy is on file in my office at Avenal City Hall, 919 Skyline Blvd., Avenal, California, 93204.

Date: August 12, 2005

ATTEST:

Nina Garza, CITY CLERK

RESOLUTION NO. 2005-51

**A RESOLUTION OF THE CITY COUNCIL OF AVENAL FOR THE ADOPTION OF
THE 2005 UPDATE TO THE AVENAL GENERAL PLAN**

WHEREAS, the City Council of the City of Avenal ("City") initiated an update to the Avenal General Plan ("Project") to identify new growth areas, appropriate land uses, and public facilities needed to support new growth in the community; and,

WHEREAS, the City solicited input from the community as a whole and conducted a community workshop; and,

WHEREAS, the City solicited input from a General Plan Advisory Committee composed of representatives from the business community, the public, schools, Planning Commission, City Council and building industry; and,

WHEREAS, the City conducted an analysis of the economic base of the community and has determined that economic development is essential to the health and prosperity in the community including the reduction in the unemployment rate, a reduction in overcrowding in the community, the provision of adequate public facilities, including schools, and the maintenance of an adequate fiscal base to provide needed services to the residents of the community; and,

WHEREAS, the City has conducted an environmental analysis of the Project and determined that certain mitigation measures are feasible and have been included in the Project as General Plan policies and development requirements; and,

WHEREAS, despite the mitigation measures included in the Project, conversion of prime agricultural land to urban uses, and air quality are still considered significant environmental effects since they are cumulatively considerable when compared to other activities in the planning area; and,

WHEREAS, the Housing Element was previously adopted by the City Council and shall remain in full force and effect; and,

WHEREAS, the Planning Commission reviewed the Project on July 5, 2005, and recommended to the City Council that the 2005 General Plan Update be adopted.

NOW, THEREFORE, BE IT RESOLVED by The City Council of the City of Avenal as follows:

- Section 1. The Avenal City Council certifies that the statements contained herein are true and correct.
- Section 2. The Avenal City Council hereby adopts the Land Use Diagram, the Urban Boundaries and the Circulation Diagram as shown in Attachment A as the official General Plan Diagram for the Avenal General Plan.

Section 3 The Avenal City Council hereby approves and adopts the General Plan policies in Attachment B, as amended.

Section 4. The Avenal City Council hereby adopts the updated General Plan, including the previously adopted Housing Element, as the official General Plan for the City of Avenal and directs that all development projects and public projects be in conformance with the General Plan.

PASSED AND ADOPTED at a regular meeting of the Avenal City Council on the 11th day of August, 2005 by the following roll call vote:

AYES: *CASIDA, BARRERA, LARA, ELLIOTT, CRAIGHEAD.*

NOES: *NONE.*

ABSENT: *NONE.*

ABSTAIN: *NONE.*

Approved:

Sid Craighead, Mayor

ATTEST:

Nina Garza, City Clerk

The Board of Directors hereby approves and authorizes the President to execute the following:

Section 1

The Board of Directors hereby approves and authorizes the President to execute the following:

Introduction

General Plan is the guiding document for the City of Aval. It provides a long-term vision for the city and sets the stage for future development. The General Plan is updated every 10 years to reflect changes in the city and the region.

INTRODUCTION

Oasis On The Sun

INTRODUCTION

California state law requires each city and county to adopt a general plan “for the physical development of the county or city, and any land outside its boundaries which bears relation to its planning” (§65300). The California Supreme Court has called the General Plan the “constitution for future development.” Avenal’s General Plan expresses the community’s development goals and embodies public policy relative to the distribution of future land uses, both public and private. State law specifies that each General Plan address seven issue areas: land use, circulation, open space, conservation, housing, safety and noise.

The Avenal General Plan provides comprehensive planning for the future. It encompasses what the City is now, what it intends to be, and provides the overall framework of how to achieve this future condition. Estimates are made about future population, household types and employment, so that plans for land use, circulation and public facilities can be made to meet future needs. The General Plan represents an agreement on the fundamental values and a vision that is shared by the residents and the business community of Avenal and the surrounding area of interest. Its purpose is to provide decision makers and staff of the City of Avenal with direction for confronting present issues, as an aid in coordinating planning issues with other governmental agencies, and for navigating the future.

- The Land Use Element provides the central policy context on which to base all land use decision-making in Avenal. It is through the implementation of the goals, objectives and policies and standards that the future land use pattern of Avenal will continue to be shaped.
- The Housing Element looks at the current and future need for housing units, the capacity in the City for additional units, the types of households that will need some form of assistance or special housing, and ways to perpetuate existing housing.
- Transportation routes, design standards for streets, and current and future traffic levels on City streets are among the issues covered in the Circulation Element of the General Plan.
- Conservation issues include strategies for an orderly transition from agriculture to urban uses, groundwater recharge, water conservation methods, and commitment to conservation of agricultural lands by establishing a greenbelt around the City.

- Open space and recreation issues include discussion of parks and recreation resources, targeted growth of these facilities, and targeting open space to function in a multi-use capacity.
- Existing and future noise from traffic and other activities are issues discussed in the Noise Element.
- The Safety Element of the General Plan analyzes conditions in the City and surrounding area that may be hazardous to those who live and work there, such as flood inundation, fire and hazardous materials.

Each of these issue areas have goals, objectives, policies and standards designed to provide a safe and pleasant environment in the future. Avenal's General Plan contains not only the seven mandatory elements required by state law, but also several additional elements. These include: Public Facilities, Economic Development, Community Design, Urban Boundary, and Air Quality. Each General Plan chapter covers an aspect of the City's growth and development. Components of each section are interrelated and therefore must be consistent with each other. Taken together, they provide the guidance for all aspects of planning for the future.

Having adopted the General Plan, the City assumes the responsibility to implement it, to report on its continuous status, and to communicate with citizens and other agencies regarding the Plan's policies.

Organization of the General Plan

This General Plan is an update, expansion and reorganization of the 1992 General Plan. Significant changes to the 1992 General Plan have occurred; including expanding the boundaries of the Sphere of Influence (SOI) to the east and north; the inclusion of 10-year growth boundaries; an updated circulation system; and a reclassification of land use designations. The Planning Area encompasses the City limits and is coterminous with the SOI boundary.

The Avenal General Plan consists of three separate documents – a General Plan Background Report, Policies document, and the Environmental Impact Report and technical appendices. The General Plan Policies document contains ten (10) chapters. The focus of each element consists of goals, objectives and policies and standards associated with the major issue areas. Some of the elements contain related background information required by State law. The Environmental Impact Report presents the three alternatives and documents how the proposed plan will impact the environment as compared to the alternative plans. The technical appendices contain technical reports and background information which provide a more detailed analysis.

Context

The Avenal General Plan Project Area is located within western Kings County, approximately 26 miles southwest of Lemoore and 33 miles southwest of Hanford. The Avenal General Plan covers a 22.5 square mile Planning Area which encompasses the City of Avenal and unincorporated Kings County. All lands outside of the City's SOI/Planning Area are regulated by the Kings County General Plan and zoning

designations. However, State law requires that cities plan for areas outside of their immediate jurisdiction, if the areas have a direct relationship to planning needs.

The Avenal General Plan Project Area consists of three distinct geographical areas: the Kettleman Plain, west of Kettleman Hills which includes the urbanized area of the City and the Avenal State Prison; the Kettleman Hills to the north of the urbanized areas; and the San Joaquin Valley east of the Kettleman Hills.

Intent of the Plan

This General Plan was developed through a cooperative effort involving the City Council and Planning Commission, City staff and their consultants, and the General Plan Advisory Committee. The General Plan Update process disclosed that expansion of employment, recreation, industrial opportunities, circulation and adequate public facilities and services are concerns which have been instrumental in shaping the plan.

The General Plan Background Report included Planning Principles which helped to guide the development of the General Plan and asked that a General Plan Advisory Committee (GPAC) review the policies appropriate to implement these principles, to develop a land use plan, and to develop appropriate zoning designations and regulations in conformance with the General Plan. The Planning Principles are as follows:

- Avenal's friendly, small town atmosphere should be preserved by ensuring diverse, appropriate scale retail services; citizen participation in decision making; quality of public schools and adequacy of public services.
- Additional services and facilities should be planned so that Avenal provides a full range of medical, office, retail, convenience and entertainment services that are needed by residents.
- The role of the downtown as a focal point for the community should be preserved. Adequate expansion area should be planned so that it will grow in proportion to the rest of the community. Sites for more retail, entertainment, specialty stores and medical services should be identified.
- The commercial opportunities afforded by Skyline Boulevard should be capitalized on.
- Development in the community should be compact and contiguous to existing developed areas. New development area should "square off" existing developed areas.
- The City's Sphere of Influence and growth policies should ensure that the community is physically distinct from others and contains an agricultural buffer area.
- Traffic conflicts should be resolved, including connectivity between neighborhoods, access to industrial areas, and critical intersections. Growth should be allocated with accessibility constraints in mind.

- Local streets and minor collector streets should be used to provide connectivity between neighborhoods while limiting cross-town trips through neighborhoods. Collector and local roads should be designed to provide good, safe connectivity between neighborhoods, services and facilities.
- The City shall encourage the development of more organized sports areas with easy access to those areas.
- Maintain and enhance Avenal's visual quality and design the community so that there is interaction among neighborhoods and a strong emphasis on neighborhood conservation.
- The Industrial area northeast of Interstate 5 will be actively marketed for new industries, have sites which are functional, have adequate public services and easy access to major streets.

Administering the General Plan Program

Once adopted, the General Plan does not remain static. State law provides direction on how cities can maintain the plan as a contemporary policy guide. Government Code section 65400 [b] directs the Planning Department to report annually to the City Council on the status of the plan and progress in its implementation.

Over time it may be necessary to re-evaluate the objectives and policies and modify them due to changes in the environment, regional considerations, and the economy. Up to four general plan amendments per year for each mandatory element are permitted by State law. It is required that any decision on a general plan amendment be supported by findings of fact.

General Plan Requirements

While they allow considerable flexibility, state planning laws do establish some requirements for the issues that general plans must address. The California Government Code establishes both the content of general plans and rules for their adoption and subsequent amendment. Together, state law and judicial decisions establish three overall guidelines for general plans.

- **The General Plan must be comprehensive.** This requirement has two aspects. First, the General Plan must be geographically comprehensive. That is, it must apply throughout the entire incorporated area and it should include other areas that the City determines are relevant to its planning. Second, the General Plan must address the full range of issues that affects the City's physical development.
- **The General Plan must be internally consistent.** This requirement means that the General Plan must fully integrate its separate parts and relate them to each other without conflict. The internal consistency requirement has five dimensions: equal status among elements, consistency between elements, consistency within elements, area plan consistency and text and diagram consistency.
- **The General Plan must be long-range.** Since the General Plan affects the welfare of current and future generations, state law requires that the plan take a long-term perspective (§65300). The General Plan

projects conditions and needs into the future as a basis for determining objectives. It also establishes long-term policies for day-to-day decision-making based upon those objectives.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the success of any business and for the protection of the interests of all parties involved. The document also mentions the need for regular audits and the importance of having a clear system of accounting.

The second part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the success of any business and for the protection of the interests of all parties involved. The document also mentions the need for regular audits and the importance of having a clear system of accounting.

The third part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the success of any business and for the protection of the interests of all parties involved. The document also mentions the need for regular audits and the importance of having a clear system of accounting.

The fourth part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the success of any business and for the protection of the interests of all parties involved. The document also mentions the need for regular audits and the importance of having a clear system of accounting.

Administrative Requirements of the Program

The first part of this section discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the success of any business and for the protection of the interests of all parties involved. The document also mentions the need for regular audits and the importance of having a clear system of accounting.

The second part of this section discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the success of any business and for the protection of the interests of all parties involved. The document also mentions the need for regular audits and the importance of having a clear system of accounting.

Conclusion

The document concludes by emphasizing the importance of maintaining accurate records of all transactions. It states that proper record-keeping is essential for the success of any business and for the protection of the interests of all parties involved. The document also mentions the need for regular audits and the importance of having a clear system of accounting.

The document also mentions the need for regular audits and the importance of having a clear system of accounting. It emphasizes that proper record-keeping is essential for the success of any business and for the protection of the interests of all parties involved. The document also mentions the need for regular audits and the importance of having a clear system of accounting.

The document also mentions the need for regular audits and the importance of having a clear system of accounting. It emphasizes that proper record-keeping is essential for the success of any business and for the protection of the interests of all parties involved. The document also mentions the need for regular audits and the importance of having a clear system of accounting.

The document also mentions the need for regular audits and the importance of having a clear system of accounting. It emphasizes that proper record-keeping is essential for the success of any business and for the protection of the interests of all parties involved. The document also mentions the need for regular audits and the importance of having a clear system of accounting.

1.0

NOISE ELEMENT

1.0 NOISE ELEMENT

Introduction

Noise levels within the community of Avenal affect the quality of life of people living and working in the City. The most significant noise levels within the community are associated with roadways and the Avenal Regional Landfill. High noise levels associated with these and other activities can create stress and irritation. The Noise Element addresses the physiological, psychological and economic effects of noise by providing effective strategies to reduce excessive noise and limit community exposure to loud noise sources.

Purpose of the Noise Element

Government Code § 65302 (F) states that a City's General Plan must include "*A noise element which shall identify and appraise noise problems in the community. The noise element shall recognize the guidelines established by the Office of Noise Control in the State Department of Health Services and shall analyze and quantify, to the extent practicable, as determined by the legislative body, current and projected noise levels for all of the following sources:*

1. *Highways and freeways.*
2. *Primary arterials and major local streets.*
3. *Passenger and freight on-line railroad operations and ground rapid transit systems.*
4. *Commercial, general aviation, heliport, helistop, and military airport operations, aircraft overflights, jet engine test stands, and all other ground facilities and maintenance functions related to airport operation.*
5. *Local industrial plants, including, but not limited to, railroad classification yards.*
6. *Other ground stationary noise sources identified by local agencies as contributing to the community noise environment."*

Scope and Content of the Noise Element

The State of California recognizes the relationship between noise and noise-sensitive uses and has adopted State Guidelines for Noise Elements. This Noise Element satisfies the requirements of State planning law and is a mandated component of the General Plan. Government Code Section 65302 (f) establishes the

1.0 Noise Element

required components of the Noise Element. The Element also complies with California Health and Safety Code Section 56050.1 guidelines for Noise Elements.

Future noise conditions from short- and long-term growth are quantified and identified as noise exposure contours. This noise information serves as the basis for developing guidelines for identifying compatible land uses; identifying the proper distribution of land uses on the General Plan Land Use Map; and establishing proper development standards.

The Noise Element comprises four sections: the Introduction; Purpose of the Noise Element; Scope and Content of the Noise Element; and the Goals, Objectives and Policies. In the Goals, Objectives, and Policies section, major issues pertaining to noise sources are identified and related policies are established. The objectives are statements of the City's desires, and comprise broad statements of purpose and direction. The policies and standards serve as guides for reducing or avoiding adverse noise impacts on the population.

Objectives

- A. To protect the citizens of the City from the harmful and annoying effects of exposure to excessive noise.
- B. To protect the economic base of the City by preventing incompatible land uses from encroaching upon existing or planned noise-producing uses.
- C. To preserve the tranquility of residential areas by preventing noise producing uses from encroaching upon existing or planned noise-sensitive uses.
- D. To educate the citizens of the City concerning the effects of exposure to excessive noise and the methods available for minimizing such exposure.

Policies and Standards

- 1. Areas shall be recognized as noise impacted if exposed to existing or projected future noise levels at the exterior of buildings exceeds 65 dB Ldn (or CNEL).
- 2. Noise sensitive land uses should be discouraged in noise impacted areas unless effective mitigation measures are incorporated into the specific design of such projects to reduce exterior noise levels to 65 dB Ldn (or CNEL) or less and 45 dB Ldn (or CNEL) or less within interior living spaces. Noise sensitive land uses include hospitals, residences, schools, churches, and other uses of a similar nature as determined by the Community Development Director.
- 3. Industrial, commercial or other noise generating land uses should be discouraged if resulting noise levels will exceed 65 dB Ldn (or CNEL) at the boundary areas of planned or existing noise sensitive land uses. Noise sensitive land uses should not be located near roadways or railways that exceed 65 dB Ldn (or CNEL).

4. The City shall enforce applicable State Noise Insulation Standards (California Administrative Code, Title 24) and Uniform Building Code (UBC noise requirements).
5. New equipment and vehicles purchased by the City should comply with noise level performance standards consistent with the best available noise reduction technology.
6. The preferred method of noise control used is thoughtful site design. Secondly, noise control should be achieved through the use of artificial noise barriers. Site and building design guidelines may include:
 - a. Noise sensitive land uses should not front onto the primary noise source. Where this is not possible, the narrow portion of the building should face the primary noise source, and the interior layout should locate the most sensitive areas away from the noise source by placing garages, storage facilities, carports or other such areas nearest the noise source.
 - b. Site design should permit noise to pass around or through a development. This can be achieved by placing the narrow or convex portion of the structure toward the primary noise source.
 - c. Commercial and industrial structures should be designed so that any noise generated from the interior of the building is focused away from noise sensitive land uses.
 - d. Two-story residential construction should be avoided, where possible, immediately adjacent to arterials or collectors unless an adequate combination of noise attenuation procedures are used.
 - e. When possible, new residential cul-de-sacs should be perpendicular to adjacent arterials or collectors.
 - f. Loading and unloading activities for future commercial uses over 20,000 square feet in size should be conducted in an enclosed loading dock where feasible, preferably with a positive seal between the loading dock and trucks.
7. The City shall review all relevant development plans, programs and proposals to ensure their conformance with the policy framework outlined in this Noise Element.
8. Prior to the approval of a proposed development in a noise impacted area, or the development of an industrial, commercial or other noise generating land use in or near an area containing existing or planned noise sensitive land uses, an acoustical analysis may be required if all of the following findings are made:
 - a. The existing or projected future noise exposure at the exterior of buildings which will contain noise sensitive uses or within proposed outdoor activity areas (patios, decks, backyards, pool areas, recreation areas, etc.) exceeds 65 dB Ldn (or CNEL).

- b. Interior residential noise levels resulting from offsite noise are estimated to exceed 45 dB(A).
- c. Estimated or projected noise levels cannot be reduced to the noise exposure limitations specified in this Noise Element by the application of Standard Noise Reduction Methods.

When noise studies are necessary they should:

- a. Be the responsibility of the applicant.
 - b. Be prepared by an individual or firm with demonstrable experience in the fields of environmental noise assessment and architectural acoustics.
 - c. Include representative noise level measurements with sufficient sampling periods and locations to adequately describe local conditions.
 - d. Include estimated noise levels in terms of dB Ldn (or CNEL) for existing and projected future conditions, with a comparison made to the adopted policies of the Noise Element.
 - e. Include recommendations for appropriate mitigation measures to achieve compliance with the adopted policies and standards of the Noise Element.
 - f. Include estimates of noise exposure after the prescribed mitigation measures have been implemented. If compliance with the adopted standards and policies of the Noise Element will not be achieved, a rationale for acceptance of the project must be provided.
 - g. The acoustical analysis should be prepared as early in the project review or permitting process as possible, so that noise mitigation measures may be an integral part of the project design rather than an afterthought.
9. Noise created by temporary activities necessary to provide construction or required services should be permitted for the shortest duration possible and limited to time periods that will have the least possible adverse impact on surrounding land uses.

2.0

SAFETY ELEMENT

2.0 SAFETY ELEMENT

Introduction

The quality of life in Avenal is directly impacted by the sense of security of its residents and businesses. In order to provide a safe and enjoyable environment for residents, it is important to address the issues of crime, violence, and other human caused hazards, and to prepare a response to uncontrollable natural hazards. The Safety Element establishes objectives and policies and standards to ensure that there is an adequate, coordinated and expedient response to public safety concerns.

Purpose of the Safety Element

The purpose of the Safety Element is to identify and address those features or characteristics existing in or near Avenal that represent a potential hazard to the community's citizens, sites, structures, public facilities and infrastructure. The Safety Element establishes policies to minimize the danger to residents, workers and visitors, while identifying actions needed to manage crisis situations such as earthquakes, fires and flooding. The Element also focuses on preventing criminal activity and violence before they occur. Additionally, the Safety Element contains specific policies to regulate existing and proposed development in hazard-prone areas.

Scope and Content of the Safety Element

The Safety Element satisfies the requirements of state planning law and is a mandated component of the General Plan. Government Code section 65302 (g) sets forth a list of hazards that the Element must cover, if they pertain to conditions in the City. These hazards are:

- Seismically induced conditions including ground shaking, surface rupture, ground failure, tsunami and seiche;
- Slope instability leading to mudslides and landslides;
- Subsidence and other geologic hazards;
- Flooding;
- Wildland and urban fires; and
- Evacuation routes.

2.0 Safety Element

The Safety Element contains four sections: the Introduction; Purpose of the Safety Element; Scope and Content of the Safety Element; and Objectives, Policies and Standards. In the Objectives, Policies and Standards section, major issues pertaining to hazardous conditions and safety are identified and related policies established. The policies serve as guidelines for reducing the risks associated with humans, including criminal activity and natural hazards. The policies also serve to direct and maximize community emergency preparedness.

2.1 *Emergency Planning*

Objectives

- A. Reduce the potential for loss of life and property resulting from natural and manmade hazards to a minimum.
- B. Coordinate responses in the event of a local or regional natural or manmade disaster.

Policies and Standards

- 1. The City will maintain its emergency preparedness, including evacuation procedures, to address potential natural and manmade hazards. These procedures shall be developed in coordination with Kings County's emergency operations plans.
- 2. All new buildings shall conform to state standards set forth in the Dangerous Building Code contained in the most current edition of the Uniform Building Code.
- 3. The City shall coordinate fire protection services with Kings County and neighboring communities, including consideration of mutual aid and instant aid agreements.
- 4. The City shall maintain and establish a network of streets that permits emergency vehicle access to any individual property that is no more than one minute from designated Arterial, Collector or Minor Collector roadways.

2.2 *Fire Protection*

Objective

- A. An effective and well-trained Fire Department that will protect the community from fire dangers.

Policies and Standards

- 1. The City's fire service response goal for the urbanized area shall be five minutes from "tone-out" to arrival on scene.

2. The City shall maintain a reliable water supply system that meets the fire protection needs of the community.
3. The City shall enforce the municipal code as it pertains to the abatement of fire hazards related to existing buildings, structures, and weed control.
4. The City shall support local, state and federal programs designed to inform and educate the public concerning fire prevention and suppression.
5. The City will coordinate with Kings County in the provision of fire protection services to ensure the maximum level of protection for all residences, commercial establishments and industries within the planning area.
6. The City will encourage installation of fire safety devices in all residences and require such installation at the time of original construction, remodeling or expansion.
7. The City will establish five minutes or two miles travel distance as the maximum response time or travel distance from the nearest fire station. Outside of this response range, built-in fire protection systems (i.e. sprinklers) shall be required in all new buildings excluding single-family units.
8. The City will encourage the community to become involved in promoting state and federal fire protection programs in school and civic functions.

2.3 *Flooding*

Objective

- A. Protect the lives and property of residents from the hazards of flooding.

Policies and Standards

1. Consistent with Federal standards, the City shall implement FEMA regulations and design guidelines to address 100-year flood events, and require adequate storm drainage facilities to prevent flooding within the community.
2. Through site plan review, development shall be prevented from occurring in natural drainage channels.

2.4 *Public Safety Standard*

Objective

- A. Adopt and implement safety standards for varying hazards.

Policies and Standards

1. Environmental Impact Reports should be required on all projects with potentially significant hazardous impacts as defined in the California Environmental Quality Act.
2. It is the policy of the City to require that water supply systems be related to the size and configuration of land developments. Standards as set forth in the current subdivision ordinance shall be maintained and improved as necessary.
3. Development proposals shall take into consideration required fire standards, particularly in regard to critical facilities.
4. It is the policy of the City to maintain adequate street width and connectivity in the circulation system to enable prompt response and emergency access.
5. The street network shall be designed so that it does not pose undue hazards due to excessive vehicle speeds, excessive through traffic in residential neighborhoods or street design that is in substantial excess of future projected traffic volumes.
6. Existing traffic conflicts should be resolved, including connectivity between neighborhoods, access to industrial areas and critical intersections.

3.0

**CONSERVATION, OPEN SPACE,
PARKS AND RECREATION**

3.0 CONSERVATION, OPEN SPACE, PARKS AND RECREATION

Introduction

Some of the most valuable assets of Avenal include its agricultural land, parks, historical and architectural resources. The Conservation, Open Space, Parks and Recreation Element focuses on the protection and enhancement of open space, natural and recreational resources to ensure a high quality living environment in Avenal.

Purpose of the Conservation, Open Space, Parks and Recreation Element

The Conservation, Open Space, Parks and Recreation Element meets the state requirements for Conservation and Open Space Elements as defined in Sections 65302(d) and 65301(e) of the Government Code. According to these requirements, the Conservation element must contain goals and policies to protect and maintain natural resources such as water, soils, wildlife and minerals, and prevent wasteful resource exploitation, degradation and destruction. The Open Space Element must contain goals and policies to manage open space areas, including undeveloped lands and outdoor recreation areas. Specifically, the Open Space Element must address several open space categories, such as those used for the preservation of natural resources and managed production of resources, as well as open space maintained for public health and safety reasons. This last category of open space is addressed in the Safety Element. Because the subjects required to be addressed under the Conservation Element and Open Space Element overlap substantially, the two elements, and the Parks and Recreation Element have been combined for this Plan.

Scope and Content of the Conservation, Open Space, Parks and Recreation Element

The Conservation, Open Space, Parks and Recreation Element expresses community policies to protect environmental, open space and recreational resources. Resources addressed in this element include: water resources; agricultural resources; cultural resources; ecological and biological resources; mineral resources; and parks and recreational facilities.

The Conservation, Open Space, Parks and Recreation Element is comprised of four sections: the Introduction; Purpose of the Conservation, Open Space, Parks and Recreation Element; Scope and Content of the Conservation, Open Space, Parks and Recreation Element; and the Objectives, Policies and

Standards. In the Objectives, Policies and Standards section, community open space needs and resource management issues are identified and corresponding policies are established. The objectives, which are overall statements of the City desires, are comprised of broad statements of purpose and direction. The policies serve as guidelines for planning and maintaining recreational facilities, enhancing the natural amenities of Avenal and minimizing the environmental effects of planned development.

3.1 Natural Resources

Objectives

- A. Protect natural resources, including groundwater, soils and air quality, to meet the needs of present and future generations.
- B. Ensure that environmental hazards, including potential flooding and impacts from agricultural practices, are adequately addressed in the development process within the City and Planning Area.

Policies and Standards

- 1. Allow for adequate groundwater recharge by developing storm pond and retention basins where feasible. In some areas these ponds or basins can be incorporated into recreational areas or used as wildlife habitat areas.
- 2. No new urban level development shall be approved in the urbanized portion of the City unless the development is, or can be, served by the City sewer system.
- 3. Water conservation methods shall be encouraged and continued.
- 4. To assist the City in meeting the clean air quality requirements of the Federal and State Clean Air Acts, the San Joaquin Valley Air Pollution Control District will be consulted to provide community planning guidance to help reduce potential air quality impacts. In conformance with State legislation, an Air Quality Element shall be developed based on the Air District's Air Quality Guidelines for General Plans.
- 5. Promote biological diversity and the use of plant species compatible with the bio-region.
- 6. New construction activities shall comply with the standard and optional PM-10 control measures as set forth by the San Joaquin Valley Air Pollution Control District's *Guide for Assessing and Mitigating Air Quality Impacts*.
- 7. To protect human health, the City's water resources will be monitored on a regular basis to test for bacteriological and toxic chemical components.

8. Maximize farmland, open space and wildlife habitat preservation on lands outside of the City by establishing a greenbelt, including all lands not designated for future annexation on the General Plan Land Use Diagram. The City shall use natural or manmade features to transition from urban to non-urban uses.
9. Initiate and/or support local and regional recycling programs.
10. The City will require drought tolerant plants, xeriscape principles and other water conserving landscape techniques for all new public facilities and private projects.

3.2 Parks and Recreation

Objectives

- A. Develop a high quality public park and recreation system that is convenient, accessible and affordable to all residents and visitors.
- B. Provide a range of leisure, recreation, and cultural programs and facilities that are accessible and affordable to all segments of the community.

Policies and Standards

1. It is the objective of the City to provide parks at a minimum rate of 5.0 acres of park per 1,000 population, including 1.0 acre/1,000 population for mini parks, 3.0 acres/1,000 for neighborhood parks, and 1.0 acre/1,000 for regional parks. Neighborhood parks shall be at least 5 acres. Landscape and Lighting Districts shall be used to ensure that the park facilities are adequately maintained.
2. Parks shall be developed as growth and fiscal resources warrant (i.e. availability of water), which respond to the needs of the City's diverse population.
3. Locate park and recreational facilities so that they do not conflict with adjacent land uses.
4. The City will maximize opportunity for joint use of public land and facilities such as schools, stormwater ponding basins and other recreation areas under public jurisdiction suitable for recreation.
5. All parks should be designed to meet the needs of the handicapped per the Americans with Disabilities Act.
6. Parks shall provide bermed landscaped areas to reflect the natural setting of the hillsides surrounding the City as well as provide some relief to the non-sloping areas within the urbanized portion of the City.

3.3 Open Space

Objective

- A. Create and preserve open space in the Avenal area to meet the needs of the community now and in the future.

Policies and Standards

1. The City will create and protect open space for the preservation of natural resources.
2. The City will create and preserve open space for outdoor recreation.
3. The City will preserve and protect agricultural use on lands in and surrounding the Avenal Planning Area for open space purposes and for the managed production of resources.
4. The City will create and maintain open space for public health and safety in areas which require special management or regulation.
5. The City will limit development of sensitive or constrained lands i.e. hillsides, floodpains and steep slopes.

4.0

ECONOMIC DEVELOPMENT ELEMENT

4.0 ECONOMIC DEVELOPMENT ELEMENT

Introduction

Avenal is a small agricultural community on the western edge of the San Joaquin Valley. Many opportunities exist for expanding the existing commercial and industrial employment base. Avenal wishes to keep that small town charm, but at the same time provide an equal mix of jobs and housing and an increase in industrial opportunities.

Purpose of the Economic Development Element

The purpose of the Economic Development Element is to provide guidance for economic development within the City of Avenal in order to attain an economically viable and self-sustaining community. In this sense, economically viable means providing a range of housing and employment opportunities that meet the needs of both residents and workers, attracting families and businesses to create demand for planned land uses, and establishing and funding public service levels that preserve

or enhance Avenal's quality of life.

The Economic Development Element is an optional element of Avenal's General Plan. Authority for the Economic Development Element is found in State Government Code Section 65303, which allows cities and counties to add optional elements beyond the State-mandated elements. Once adopted, an optional element carries the same legal weight as any of the other elements. The City has prepared one in order to consolidate and codify a growing body of policies concerning the economic and fiscal viability of Avenal.

Scope and Content of the Economic Development Element

The Economic Development Element establishes goals, objectives and policies and standards to guide City efforts to maintain an economically viable community.

The Economic Development Element is comprised of four sections: the Introduction; Purpose of the Economic Development Element; Scope and Content of the Economic Development Element; and

4.0 Economic Development Element

the Goals, Objectives and Policies. In the Goals, Objectives and Policies section, the City's economic development needs are identified and corresponding policies established. The goals and objectives are comprised of the City's broad statements of purpose and direction. The policies and standards serve as guidelines for providing adequate industrial, commercial and office land, infrastructure improvements, and a commercial, industrial and residential balance.

Goal

Foster and maintain a high quality of life for the City's residents by sustaining and developing a strong and diverse local economy.

Objectives

- A. To achieve and maintain a balance of jobs and housing in Avenal.
- B. To ensure that there is adequate industrial land located near major transportation routes, and served by infrastructure, to accommodate the needs of new employers.
- C. To actively market and recruit new businesses and retain existing ones, which generate local employment opportunities and sales tax revenues while assisting existing businesses in maintaining and enhancing sales, employment and the appearance of their buildings.
- D. Ensure that there is adequate infrastructure improvements which promote commercial and industrial development.
- E. To encourage a balance of commercial and industrial uses which support a strong and diverse economic base, which provide adequate fiscal revenues, and which are compatible with the needs of the community

4.1 Adequate Industrial, Commercial and Office Land

Policies and Standards

- 1. Coordinate economic development planning with land use planning. This shall include locating light and heavy industrial uses in locations that are most convenient for the community to serve, and to plan the size of industrial parcels that are most appropriate to meet the needs of the prospective employers.
- 2. The City should designate property in the industrial areas for an appropriate mix of large and small parcels. Approximately one-fourth of properties should be less than 5 acres, one-fourth should be for mid-sized parcels of between five and ten acres, approximately one-fourth should be for parcels of 10 to 20 acres, and one-fourth for properties larger than 20 acres. Interstate 5 area shall be for larger uses.

3. Encourage economic development activities which provide, either through initial stages or through expansion, the opportunity for career employment of local residents in jobs that will enable them to live in Avenal.
4. Commercial areas are encouraged to cluster in identified areas such as the downtown area to prevent and discourage strip development. Where appropriate, locate commercial uses at focal points along major arterial streets such as Skyline Boulevard.

4.2 Employer Recruitment and Retention

1. Encourage the preservation and expansion of existing industrial uses in areas designated as industrial. Land uses that may conflict with employment-generating uses should be discouraged from locating adjacent to industrial areas.

4.3 Infrastructure Improvements

1. The City shall ensure that there is at least a 10-year supply (80 acres) of zoned and vacant commercial and industrial land inside the City limits at any one time. The City will ensure that infrastructure is installed or programmed in the Capital Improvement Program for a five-year supply of land so that such property is "ready-to-go". The City should develop an Industrial Park Specific Plan for the Avenal Cutoff Road and Interstate 5 area, and the industrial area south of Avenal and east of SR 33, to ensure that such supply is available.
2. Conduct an economic development/redevelopment feasibility study, and implement a plan to finance needed infrastructure improvements, downtown improvements, and to remove substandard building conditions. The project should be used to "front-load" infrastructure improvements for key economic development activities.

4.4 Commercial, Industrial and Residential Balance

1. In the downtown area, retail, office, financial, government and professional services shall be encouraged to expand the current business mix and increase the area's economic viability as a destination point for shopping, work, dining and entertainment. The City should plan for the expansion of the downtown area along Kings and Tulare Streets between Laneva Street and Skyline Boulevard. The above is intended to provide expansion of the downtown and exposure to the community's main traffic arteries.
2. Based on projected population needs in the community, and the existing cross-commuting patterns, the City shall ensure that there is an adequate amount of office and industrial land to serve the needs of the community for the next 20 years. This will mean that at least 70 industrial acres will be needed to provide employment opportunities for those currently leaving the community and 60 to 75 industrial acres to accommodate new residents with this zone.

4.0 Economic Development Element

3. Maintain a balance of Commercial and Industrial uses in Avenal. The growth in Commercial and Industrial employment shall not substantially exceed the rate of growth in local residential population to eliminate the possibility that the community's jobs-housing balance will worsen. The amount of commercial and industrial land shall also be balanced with the amount of residential land so that the overall general plan will be fiscally positive. This will mean that at least four (4) but not more than nine (9) acres of residential land should be developed for each acre of commercial and industrial space in the community.
4. Encourage increased cooperation between the public and private sectors, such as the Chamber of Commerce, non-profit and community groups, service clubs, plant managers and business associations, in formulating economic development plans and programs.
5. Enhance the downtown area and Skyline Boulevard as a focal point for civic and tourist activities.

4.5 *Increased Tourism*

1. Increase the marketing activity of the Avenal Sand drags to bring more visitors to town.

5.0

AIR QUALITY ELEMENT

5.0 AIR QUALITY ELEMENT

Introduction

The Air Quality Element is intended to protect the public's health and welfare by implementing measures that allow the San Joaquin Valley Air Pollution Control District to attain Federal and State air quality standards that will move toward a sustainable level of air quality. To achieve this goal, the Element sets forth a number of policies and standards to reduce current pollution emissions and to require new development to include measures to comply with air quality standards. In addition, this Element contains provisions to address new air quality requirements.

California Government Code Section 65303 enables a county or city to adopt "any other elements or address any other subjects, which, in the judgment of the legislative body, relate to the physical development of the county or city." The City of Avenal has adopted the Air Quality Element to help the community meet ambient air quality standards established by the U.S. Environmental Protection Agency and the California Air Resources Board.

Purpose of the Air Quality Element

The purpose of the Air Quality Element is to identify air quality problem areas and implement policies and standards to address those problem areas. Without the implementation and maintenance of appropriate air quality standards, threats to public health and a declining quality of life may result. The Air Quality Element, although not mandated by state planning law, has been included in Avenal's General Plan to ensure a healthy environment through the management of our air resources.

Scope and Content of the Air Quality Element

The Air Quality Element includes goals, objectives and policies and standards for minimizing the number and length of vehicle trips, transportation alternatives, and for requiring area and stationary source projects that generate significant amounts of air pollutants to incorporate air quality mitigation in their design.

Goal

To protect the health and welfare of Avenal residents by promoting development that is compatible with air quality standards.

Objectives

- A. Develop consistent and accurate procedures for evaluating the air quality impacts of new projects.
- B. As part of the development review process, develop mitigation measures to minimize stationary and area source emissions.
- C. Develop transportation systems that minimize vehicle delay and air pollution.
- D. Develop consistent and accurate procedures for mitigating transportation emissions from new and existing projects.
- E. Encourage alternative modes of transportation including pedestrian, bicycle, and transit usage.
- F. Conserve energy and reduce air emissions by encouraging energy efficient building designs and transportation systems.

Policies and Standards

- 1. Coordinate with other local and regional jurisdictions, including the SJVAPCD and the California Air Resources Board (ARB), in the development of regional and county clean air plans and incorporate the relevant provisions of those plans into City planning and project review procedures. Also cooperate with the SJVAPCD and ARB in:
 - Enforcing the provisions of the California and Federal Clean Air Acts, state and regional policies, and established standards for air quality.
 - Economy clean fuel for city vehicle fleets, when feasible.
 - Developing consistent procedures for evaluating project-specific and cumulative air quality impacts of projects.
- 2. Require area and stationary source projects that generate significant amounts of air pollutants to incorporate air quality mitigation in their design, including:

- The use of best available and economically feasible control technology for stationary industrial sources;
 - The use of EPA Phase II certified wood burning heater or pellet stoves in new residential units;
 - The use of new and replacement fuel storage tanks at refueling stations that are clean fuel compatible, if technically and economically feasible; and
 - The promotion of energy efficient designs, including provisions for solar access, building siting to maximize natural heating and cooling, and landscaping to aid passive cooling and to protect from winter winds.
3. Develop strategies to minimize the number and length of vehicle trips, which may include:
- Promoting commercial/industrial project proponent sponsorship of van pools or club buses;
 - Encouraging commercial/industrial project day care and employee services at the employment site;
 - Encouraging the provision of transit, especially for employment-intensive uses of 200 or more employees; and
 - Providing expansion and improvement of public transportation services and facilities in conjunction with KART.
4. Encourage transportation alternatives to motor vehicles by developing infrastructure amenable to such alternatives by doing the following:
- Consider right-of-way requirements for bike usage in the planning of new arterial and collector streets and in street improvement projects;
 - Require that new development be designed to promote pedestrian and bicycle access and circulation; and
 - Provide safe and secure bicycle parking facilities at major activity centers, such as public facilities, employment sites, and shopping and office centers.
5. Encourage land use development to be located and designed to conserve air quality and minimize direct and indirect emissions of air contaminants by doing the following:
- Locate air pollution point sources, such as manufacturing and extracting facilities in areas designated for industrial development and separated from residential areas and sensitive receptors (e.g., homes, schools, and hospitals);

5.0 Air Quality Element

- Establish buffer zones (e.g., setbacks, landscaping) within residential and other sensitive receptor site plans to separate those uses from highways, arterials, hazardous material locations and other sources of air pollution or odor;
- Consider the jobs/housing/balance relationship (i.e., the proximity of industrial and commercial uses to major residential areas) when making land use decisions;
- Provide for mixed-use development through land use and zoning to reduce the length and frequency of vehicle trips;
- Accommodate a portion of the projected population and economic growth of the City in areas having the potential for revitalization;
- Locate public facilities (libraries, parks, schools, community centers, etc.) with consideration of transit and other transportation opportunities;
- Encourage small neighborhood-serving commercial uses within or adjacent to residential neighborhoods when such areas are aesthetically compatible with adjacent areas; do not create conflicts with neighborhoods schools; minimize traffic, noise, and lighting impacts; encourage and accommodate pedestrian and bicycle access; and, are occupied by commercial uses that have a neighborhood-scale market area rather than a community-wide market area; and
- Encourage a development pattern that is contiguous with existing developed areas of the City.

6.0

CIRCULATION ELEMENT

6.0 CIRCULATION ELEMENT

Introduction

In the City of Avenal, regional vehicular transportation is provided by State Highway 269 which runs in an east to west direction through the center of town. State Highway 33 runs through the southern part of town in a north to south direction. Interstate 5 is in the northern part of the City limits and runs in a north to south direction. Avenal is currently served by a fixed rate transit system, the Kings Area Rural Transit offers fixed rate service to Avenal residents and visitors.

Purpose of the Circulation Element

The Circulation Element guides the continued development and improvement of the circulation system to support existing and planned development, while the Land Use Element identifies the City's planned development pattern. The development of additional land in the future will increase the demand for local and regional roadway improvements and construction. The Circulation Element establishes acceptable roadway service levels and identifies improvements required to maintain the service levels. The use of other modes of transportation such as transit, walking and bicycling is promoted to reduce the demand for transportation system improvements and to improve air quality. The pedestrian and bicycling systems will also be used to connect the various activities centers identified in the Land Use Element and promote a pedestrian/bicycle friendly community.

The purpose of the Circulation Element is to provide a safe, efficient, and adequate circulation system for the City. State planning law requires: "...a circulation element consisting of the general location for proposed major thoroughfares, transportation routes, terminals and other local public utilities and facilities, all correlated with the land use element plan." To meet this purpose, the Circulation Element addresses the circulation improvements needed to provide adequate capacity for future land uses. The Element establishes a hierarchy of transportation routes with typical development standards described for each roadway category. Reference the map pocket for the General Plan Circulation Map.

Scope and Content of the Circulation Element

The state General Plan Guidelines recommend that the circulation policies and plans should:

- Coordinate the transportation and circulation system with planned land uses;
- Promote the safe and efficient transport of goods and the safe and effective movement of all segments of the population;
- Make efficient use of existing transportation facilities; and
- Protect environmental quality and promote the wise and equitable use of economic and natural resources.

The Guidelines indicate that the Circulation Element should address all facets of circulation including streets and highways, transportation corridors, public transit, railroads, bicycle and pedestrian facilities and commercial, general and military airports. The Avenal Circulation Element fulfills state requirements with a plan to provide effective circulation facilities supporting desired community development. Along with circulation, public utilities must be addressed in the General Plan. Instead of addressing utilities within the Circulation Element, the Avenal General Plan contains a Public Services and Facilities Element that discusses the provision of utilities and public services/facilities.

This element contains goals, objectives, and policies and standards to improve overall circulation in Avenal. For vehicular transportation, a hierarchical roadway network is established with designated roadway types and design standards. The roadway type is linked to anticipated traffic levels, and acceptable levels of service are established to determine when capacity improvements are necessary. Because local circulation is linked with the regional system, the element also focuses on participation in regional programs to alleviate traffic congestion and construct capacity improvements. Alternative transportation modes are also emphasized in this element to reduce dependency on the automobile and thereby improve environmental quality.

Goal

To design and maintain a fully integrated local network that provides for safe and convenient circulation using a variety of transportation modes.

Objectives

- A. Maintain a roadway level of service (LOS) of C or better on local streets and Minor Collectors, and LOS of D or better for Collector and Arterial streets.
- B. Enhance the availability and accessibility of alternative modes of transportation, such as walking, bicycling, carpools, buses and rail.

- C. Improve neighborhood livability by ensuring that streets are related to other aspects of the community which enhance and contribute to Avenal's small town charm, provide safe and pleasant conditions for residents, and have adequate emergency access.
- D. Design streets that promote safe and pleasant conditions for residents, pedestrians, bicyclists and motorists on neighborhood streets, while preserving access for emergency vehicles, buses and other users.

Policies and Standards

6.1 General Circulation and Street System

- 1. Consider traffic impact fees for providing sufficient funding for circulation network improvements necessitated by planned future growth.
- 2. Incorporate features such as bus shelters, bicycle storage, bicycle racks and park and ride lots into the design of public and private development projects.
- 3. Designate a network of bicycle routes providing safe passage throughout the City; establish linkages between schools, parks and designated bikeways.
- 4. Require bicycle storage facilities as a condition of approval for multi-family residential development projects containing 10 or more units and for all commercial and public development proposals.
- 5. Conduct an assessment of existing parking requirements and consider reducing them as a means of attracting commercial development.
- 6. Restrict truck traffic along Kings Street in order to facilitate and encourage pedestrian access to downtown during prime business hours.
- 7. Provide additional landscaping, including street trees, along existing roadways.
- 8. The City will budget for traffic improvements in the Capital Improvement Program each fiscal year.
- 9. Over-design of streets including streets that are too wide for projected traffic volumes shall be avoided to save lives, property and money.
- 10. In the interest of reducing housing production costs and City maintenance costs, street widths should be minimized. Where appropriate, private streets and other design features to reduce street construction costs shall be incorporated into new subdivisions.

11. Lighting and Landscape Districts and other mechanisms shall be considered and encouraged for the maintenance and operation of new appurtenances to residential streets.
12. In new residential subdivisions, to the maximum extent possible, local streets should be aligned in an east-west orientation.
13. Local residential streets shall be kept at a curb to curb width of 32 – 36 feet and provided with shade to prevent excessive heat build-up.
14. Design the street network with multiple connections and relatively direct routes for motorists, as well as pedestrians and bicyclists.
15. Residential streets shall be designed with sidewalks on both sides. Sidewalks shall be a minimum width of 4.5 feet to provide enough room for two pedestrians to walk side by side. Sidewalks and bike lanes shall be shaded by trees for pedestrian comfort.
16. Through streets and Collectors or Arterials should be no more than over a half-mile apart.
17. Short streets, trees, on-street parking, tee intersections, use of terminating vistas and traffic calming devices shall be considered to limit vehicle speed.
18. Use traffic calming measures to keep speeds on streets that provide direct access to homes down to 20 mph. (See Table 6-1)
19. Streets shall be designed in accordance with projected traffic volumes and city-adopted level of service standards. Oversized streets shall be discouraged.
20. Connectivity shall be encouraged and provided, which permits vehicular and non-vehicular circulation within a neighborhood without exclusive reliance on perimeter Collectors and Arterials.
21. The right-of-way for the circulation system shall be developed and dedicated to the appropriate extent when development or division of property occurs.
22. Street widening and right-of-way acquisition in existing developed areas shall be undertaken when required for obvious safety reasons, such as trends towards higher accident rates or marked decline in overall levels of service.
23. Established truck routes shall be maintained. New truck routes should be limited to Arterials and Collectors.
24. Minor Collectors shall be used to provide connectivity within neighborhoods as shown in Figure 6-1. These streets shall have offsets, and/or other traffic calming features, in conformance with table

6-1, to discourage through traffic. They should also be designed to avoid four way intersections, when possible.

25. Minor Collector streets shall provide access to traffic generating land uses such as schools, hospitals, shopping and recreation areas.

Figure 6-1
Overall Conceptual Circulation Plan
(Illustrative Only, Refer to Policies for Precise Requirements)

T = Traffic calming devices as required to maintain a speed of 25 MPH or less.

26. Arterials shall be designated to provide cross-town, through-town, and inter-city traffic. Frequent drive approaches shall be discouraged, where possible, to facilitate traffic flow and reduce potential traffic conflicts and hazards.
27. Direct access (driveways) to individual dwelling units to Arterials shall be prohibited. Direct access to Collector streets with projected traffic volumes at full build-out in excess of 2,000 average daily trips, shall also be prohibited.
28. Overnight truck (tractor-trailer) parking shall be prohibited in residential areas, or other areas that are deemed inappropriate.
29. Traffic calming features may be used in accordance with Table 6-1. Passive traffic calming features such as road curvature and width, narrowings, street offsets and other built-in features are preferred over roadway obstructions such as speed humps or tables, chicanes, barriers, diverters, or traffic islands.

Table 6-1
Permitted Traffic Calming Measures

	Functional Classifications					Subdivision Streets			
	Interstates Freeways Expressways	Arterials	Collectors	Minor Collectors	Local Roads	Collector Streets	Minor Collector Streets	Local Streets	Other Restrictions
Volume Control Measures									
Full Closure Half Closure	Not Recommended				Only on an exception basis	Not Recommended	>500 vpd >25% non-local traffic		
Diagonal Diverter Median Barriers Forced Turn Islands	Not Recommended				<5,000 vpd >25% non-local traffic	Not Recommended	>500 vpd >25% non-local traffic		
Vertical Speed Control Measures									
Speed Humps	Not Recommended				Only on an exception basis	Daily volumes <3,000 vpd Posted speed <30 mph		Not on primary emergency routes or bus routes	
Speed Tables Raised Crosswalks Raised Intersections	Not Recommended					Daily volumes <5,000 vpd Posted speed <35 mph		Not on primary emergency routes	
Horizontal Speed Control Measures									
Mini-traffic Circles	Not Recommended				Only on an exception basis	Daily volumes <5,000 vpd Posted speed <35 mph		Not on primary emergency routes or bus routes	
Roundabouts	Not Recommended					Combined approaches – daily volumes <5,000 vpd Posted Speed < 35 mph			
Lateral Shifts	Not Recommended					Daily volumes <10,000 vpd Posted speed <35 mph			
Chicanes	Not Recommended					Daily volumes <5,000 vpd Posted speed <35 mph			
Realigned Intersections	Not Recommended					Daily volumes <5,000 vpd Posted speed <35 mph			
Narrowings									
Bulbouts Two-Lane Chokers Center Islands	Not Recommended					Daily volumes <1000 vpd Posted speed <35 mph			
Combined Measures	Not Recommended					Subject to limitations of component measures			

Note: Subject to Approval by City Engineer

30. Minor Collectors and Local streets shall not carry an unreasonable level of through traffic. If it is determined that a Local street or Minor Collector is carrying an unacceptable level of through traffic, the City may take appropriate means to reduce traffic through creation of one-way traffic flow, installation of traffic diversion devices, and/or any other means deemed to be acceptable under the Vehicle Code of the State of California. For the purposes of this policy, an unreasonable level of traffic may be deemed to exist when traffic exists that is 25 percent in excess of the volume that would be expected from land uses directly served by these streets.
31. Seek to pave Union Street to the Sand Drags and add bike lanes.

Arterial Streets

32. Arterial streets shall be built at a typical separation of one (1) mile with a typical right-of-way of 110 feet as shown in Figure 6-1 and 6-2.
33. Arterial Street Standards.
- a. Driveway access to major activity centers shall be located away from adjacent intersections of a Collector or Arterial street in a manner to avoid traffic conflicts.
 - b. The distance between driveways along commercially developed Arterials shall be limited in order to provide adequate ingress/egress and merging and weaving operations.
 - c. Where possible, driveways to major activity centers shall be located on adjacent Collector streets rather than on Arterial streets.
 - d. Driveways along Arterials to single-family residential property shall be prohibited; these properties shall receive access from Local streets or Minor Collectors.
 - e. If driveways must be provided near intersections for special commercial facilities (such as service stations), these driveways shall not be serviced by median breaks and shall be located far enough from the intersecting right-of-way in order to provide safe traffic operations.
 - f. Median breaks shall provide access to Collector streets and to major activity centers and shall be located an adequate distance away from adjacent intersections of an Arterial or Collector Street.
 - g. Arterial streets shall include landscaping in accordance with Figure 6-2.
 - h. To insure that the transportation system is so planned to minimize social and economic disruptions to the neighborhoods, Arterial streets shall skirt residential areas.

Collector Streets

34. Collector streets shall be built at a typical separation of one mile (typically between adjacent Arterial streets), with a typical right-of-way of 86 to 104 feet as shown in Figures 6-1 and Figure 6-2.
35. Collector Street Standards
- a. Driveway access to major activity centers shall be located an adequate distance from adjacent Collector or Arterial street intersections.
 - b. The distance between driveways and intersecting local streets shall be limited in order to provide adequate ingress and egress.
 - c. Driveways to residential property along Collectors shall be consolidated whenever possible.
 - d. If driveways must be provided near intersections for facilities (such as service stations), these driveways shall not be serviced by median breaks and shall be located far enough from the intersecting right-of-way in order to provide safe traffic operations.
 - e. Medians on Collectors shall be raised concrete where left turn control is needed or painted median or two-way left turn pockets where otherwise appropriate.
 - f. Collectors shall include landscaping in conformance with Figure 6-2.
36. Streets shall be designed for a level of traffic that will not cause a detrimental impact on adjacent land uses.
37. Unnecessary cross-traffic conflicts shall be eliminated to improve the traffic flow along Arterials and Collectors. Raised medians shall be installed as required to restrict unsafe turning movements.
38. Collector streets shall be up to four lanes for through traffic and may include an optional median for left turn access to local streets and adjacent land uses. On street parking may be provided where street capacity does not require left turns or four through lanes.
39. Arterials and Collectors in areas of existing development shall be built to standards consistent with a policy of reducing impacts on adjacent properties.

Figure 6-2
Street Standards

6.0 Circulation Element

40. Where possible, Arterials and Collectors should form 4-leg, right-angle intersections; jog, offset and skewed intersections of major streets in near proximity shall be avoided where possible.
41. Where Arterial and Collector streets are required, residential development shall be oriented away (side-on or rear-on) from such streets, and properly buffered so that the traffic carrying capacity of the street will be preserved and the residential environment is protected from the adverse effects of the street.
42. Adequate access shall be provided to high intensity land use areas such as employment centers, shopping areas and recreation facilities.
43. Due to the traffic congestion which results from numerous points of ingress and egress along commercial streets, future commercial developments or modifications to existing developments shall be master planned with limited points of ingress and egress onto a major street.
44. Left-hand movements into and out of commercial areas shall be minimized and existing points of ingress and egress shall be consolidated whenever possible.

Minor Collectors

45. Minor Collectors shall be used to provide access within a neighborhood, and to major activity centers in a safe and efficient manner as shown in Figure 6-1.
46. Minor Collectors Standards
 - a. Minor Collectors shall be designed to connect neighborhoods and neighborhood access to schools, parks or other facilities without exclusive reliance on Arterials or Collectors as shown in Figure 6-1.
 - b. Minor Collectors shall be a 56-foot local street in accordance with Figure 6-2.
 - c. Minor Collector offsets shall be provided at least every 1,320 lineal feet of roadway, with such offsets between 125 to 200 feet. Streets shall be designed with gentle curves to achieve a 25 mph design speed. Other traffic calming features shall be provided in accordance with Table 6-1, if necessary to achieve the desired design speed.

Local Streets

47. Local Streets shall be designed in accordance with adopted standards with right-of-way widths in conformance with Figure 6-2.
 - a. 52-foot Local streets (32-foot curb to curb) may be used in cul-de-sacs or on Local streets that will have traffic volumes that do not exceed 750 ADT.

- b. Local street lengths should be short, preferably not exceeding 500 feet, or they shall be designed with gentle curves and changes in grade to limit the sight line to 500 feet.
 - c. A majority of streets should be curved or terminate so that that no street vista is longer than 500 feet.
 - d. Traffic calming features such as curb extensions, traffic circles and medians may be used to encourage slower traffic speeds, in accordance with Table 6-1.
 - e. Local streets should be aligned to form three-way intersections, when possible, in order to create inherent right-of-way assignment and to reduce accidents without the use of traffic controls.
 - f. Local streets that intersect an Arterial should be aligned with another street to form a four-way intersection. Local streets that intersect a Collector should provide for an offset. These streets should be designed so that they can easily be regulated by a stop sign or other traffic control device, if necessary.
 - g. Curb cuts for driveways to individual residential lots shall be prohibited along Arterial streets. Curb cuts shall be limited to intersections with other streets or access drives to parking areas for commercial, civic or multifamily uses. Clear sight triangles shall be maintained at intersections, unless controlled by traffic signal devices.
 - h. Pedestrian accessibility from adjacent residential neighborhoods shall be provided by the usage of through-block connections or other accessibility methods. These street linkages may include access roads, open ended cul de sacs, pedestrian paths, or other such facilities for pedestrian and bike access, and emergency access, where necessary. Such a linkage shall be made to abutting Collector or Arterials no less frequently than every 600 feet.
48. The Subdivision Ordinance, Zoning Ordinance or other applicable City codes and ordinances shall be amended to include standards to address the policies and objectives of the Circulation Element.

6.2 *Parking and Onsite Circulation*

- 1. Parking standards will be evaluated to ensure that parking requirements are satisfied within walking distance of development, and so that Arterial and Collector streets do not separate parking from the parking demand generator.
- 2. Discourage the proliferation of surface parking as a general interim land use, particularly where sound residential, commercial or industrial buildings would be demolished pending other development.
- 3. Soften the impact of expansive parking areas in all land use designations through landscaping and

6.0 Circulation Element

tree plantings as prescribed in the City Zoning Ordinance.

4. Facilitate and encourage adequate parking throughout the community including all commercial areas.
5. All new development, except as designated in the Downtown, shall provide adequate on-site parking for the on-site uses.
6. Consider the development of a downtown parking lot.

6.3 *Pedestrian and Bicycle Modes*

1. In existing developed areas where sidewalks do not exist, the City shall continue to support existing programs and pursue new programs for sidewalk construction. Bicycle accidents shall continue to be monitored and bicycle paths and lanes shall be established upon need.
2. Provide safe, aesthetic and pleasant space for pedestrians.
3. Widen sidewalks above the minimum established Improvement Standards where intensive commercial, recreation or institutional activity is present and where residential densities are high.
4. Partially or wholly close certain streets which are not required for traffic so that they can be used for pedestrian circulation and open space use.
5. Ensure convenient and safe pedestrian crossings.
6. Pedestrian and bicycle access shall be provided on Local streets and Minor Collectors to enable pedestrians to have access through a neighborhood, to shopping areas, to transit stops, schools and other such facilities.
7. Locate sidewalks, pedestrian paths, and appropriate crosswalks to facilitate access to all schools and other areas with significant pedestrian traffic. Whenever feasible, pedestrian paths shall be developed to allow for unobstructed pedestrian flow from within a neighborhood.
8. Promote safe, convenient, and accessible pedestrian access ways within the community except where there is no demonstrated need, such as industrial and rural residential areas.
9. Encourage the inclusion of green belts and common open space for pedestrian use within the residential development areas.
10. Require that Collector streets which are identified to function as links for the bicycle transportation system be provided with Class II bikeways (bike lanes) or show an alternative route. Arterial streets shall provide for a Class II bike route. In such cases, the City shall accommodate cyclists on these identified streets by widening the street or eliminating on-street parking wherever possible.

11. Design bicycle and pedestrian paths so that interaction with vehicular traffic is minimized.
12. Require the provision for safe bicycle circulation in all new developments, including bicycle parking facilities and internal bicycle and pedestrian routes.
13. Provide for the safe and convenient use of the bicycle as a means of transportation and recreation.
14. Prevent bicycle accidents through promoting bicycle safety education and improved traffic enforcement related to bicycle use.
15. Encourage adequate and secure bicycle storage facilities at all governmental, commercial and parks locations throughout the City.

6.4 *Transit*

1. Ensure choices among modes of travel and give priority to each mode when and where it is most appropriate.
2. Provide incentives for the use of transit, carpools and vanpools.
3. Coordinate the City's dial-a-ride system with regional transit services.
4. Arterials and Collectors will be designed to allow transit vehicles to pull out of traffic. This policy may be implemented with either a continuous parking lane with bus stops, or with special bus pull-out lanes.
5. Give a high priority to public transportation systems which are responsive to the needs of the commuter, aged, handicapped and disadvantaged.

1. The first part of the document is a list of the names of the people who were present at the meeting.

2. The second part of the document is a list of the topics that were discussed during the meeting.

3. The third part of the document is a list of the actions that were agreed upon during the meeting.

4. The fourth part of the document is a list of the people who were responsible for carrying out the actions.

5. The fifth part of the document is a list of the dates when the actions were to be completed.

6. The sixth part of the document is a list of the people who were responsible for monitoring the progress of the actions.

7. The seventh part of the document is a list of the people who were responsible for reporting on the progress of the actions.

8. The eighth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in accordance with the agreed-upon plan.

9. The ninth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a timely manner.

10. The tenth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a cost-effective manner.

11. The eleventh part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's values and mission.

12. The twelfth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's policies and procedures.

13. The thirteenth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's legal obligations.

14. The fourteenth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's ethical standards.

15. The fifteenth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to transparency and accountability.

16. The sixteenth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to innovation and creativity.

17. The seventeenth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to excellence.

18. The eighteenth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to sustainability.

19. The nineteenth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to social responsibility.

20. The twentieth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to environmental protection.

21. The twenty-first part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to human rights.

22. The twenty-second part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to anti-corruption.

23. The twenty-third part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to data protection.

24. The twenty-fourth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to cybersecurity.

25. The twenty-fifth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to intellectual property protection.

26. The twenty-sixth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to privacy.

27. The twenty-seventh part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to accessibility.

28. The twenty-eighth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to diversity and inclusion.

29. The twenty-ninth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to equal opportunities.

30. The thirtieth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to non-discrimination.

31. The thirty-first part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to fair employment practices.

32. The thirty-second part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to safe working conditions.

33. The thirty-third part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to health and safety.

34. The thirty-fourth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to environmental management.

35. The thirty-fifth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to quality management.

36. The thirty-sixth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to continuous improvement.

37. The thirty-seventh part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to risk management.

38. The thirty-eighth part of the document is a list of the people who were responsible for ensuring that the actions were carried out in a way that was consistent with the organization's commitment to crisis management.

7.0

LAND USE ELEMENT

7.0 LAND USE ELEMENT

Introduction

The Land Use Element is a guide to future land use within Avenal and affects many of the issues addressed in the other General Plan elements. The Land Use Element identifies the type and location of future land uses within the City. The specific land uses and their location within the community in turn affect the remaining General Plan elements. For example, the location and type of land uses outlined in the Land Use Element affect the circulation system that is identified in the Circulation Element, and the land uses identified in the Land Use Element also reflect the community's goals for its future form and character, as outlined in the Community Design Element. In addition to land uses, the Land Use Element also addresses how growth will occur, with special attention given to public services and facilities and economic development.

Purpose of the Land Use Element

As a city, state law requires that Avenal prepare and adopt a General Plan as a tool to manage growth and development. The Land Use Element is one of the seven mandatory elements of the General Plan.

The purpose of the Land Use Element is to describe present and planned land uses and their relationship to the community's long-range goals for the future. The Land Use Element identifies the proposed general distribution, location and extent of land uses such as residential, commercial, industrial and public/quasi public. The element consists of text and a map (reference map pocket) that outline the future land uses within the City and how these uses are integrated with the other General Plan elements and policies. The Land Use Map is a particularly important feature of the element since it shows the location and types of development within the City. The element also describes the intensity or density of development planned for the community. The general location of future growth is also defined in the element.

The Land Use Element of the Avenal General Plan represents the City's desire for long-range changes and enhancements of land uses. Finally, the goals, objectives and policies contained in this element establish the framework for future land use planning and decision making in Avenal.

Scope and Content of the Land Use Element

The Land Use Element complies with the requirements of the General Plan Land Use Element mandated in Government Code Section 65302(a). The element is comprised of five sections: the Introduction, Purpose of the Land Use Element, Scope and Content of the Land Use Element, Goals, Objectives and Policies, and Land Use Map. In the Goals, Objectives and Policies section, major land use issues are identified, and related goals and policies are established to address these issues. The goals, which are overall statements of community desires, are comprised of broad statements of purpose and direction. Policies serve as guides for reviewing development proposals, planning facilities to accommodate anticipated growth, and accomplishing community economic development strategies. To achieve the goals, objectives and policies, a logical, organized land use pattern is established with standards for future community development. The Land Use Map graphically identifies the planned land uses within Avenal.

Goal 1:

Preserve and enhance Avenal's unique character and achieve an optimal balance of residential, commercial, industrial and open space land uses.

7.1 Community Identity

Objectives

- A. Strive to keep Avenal separate and distinct from nearby communities.
- B. Maintain and enhance Avenal's physical diversity, visual qualities and small-town characteristics.
- C. Maintain the core area (Kings Street) as the City's geographic center.

Policies and Standards

- 1. Develop design review standards for structures, landscaping and related development to facilitate compatibility with surrounding uses and the overall character of the community.
- 2. Gateways to Avenal and the downtown shall be designated and identified by well-designed landscaped entrances to enhance access corridors. Land uses in the vicinity of Gateways should be of high quality design which reflects favorably on the image of the community.
- 3. Emphasize pedestrian amenities in the downtown area, including landscaped open space areas, street furniture, lighting and signage.
- 4. Develop a City-wide street tree and landscape master plan to delineate neighborhoods, master and specific plan areas.

5. Develop/maintain scenic entryways (gateways) and roadway corridors into the City through special setback and landscape standards, entry signage, open space and park development, and/or land use designations. These corridors shall also have enhanced landscape standards. Gateways and entryways to be considered should include:

Gateways:

North:

Highway 269/Hydril Road

West

Highway 33/W. San Joaquin
Street

South:

Highway 33/ South 7th Avenue

7.2 Residential Land Use

Objectives

- A. Ensure adequate land area is available for future housing needs.
- B. Provide new residential areas that offer a variety of housing densities, types, sizes, costs and locations to meet projected demand throughout the community.
- C. Identify locations for multi-family developments which are accessible to transportation routes, commercial areas, schools and recreation facilities.

Policies and Standards

1. Give priority consideration to infill development of vacant and underutilized land within the City limits. Consideration shall be given by financially assisting such development through special infrastructure financing programs, if available.
2. Consider annexations that are consistent with the extension of public services and facilities and other City policies and plans. The City shall maintain at least a 10-year supply of zoned land in the City for all residential land use types, and a minimum five-year supply of "ready to go" zoned land served by infrastructure. Designate an adequate amount of residential land in the General Plan for a 30-year supply of single-family and multi-family land uses.
3. In reviewing proposals for changes in land use to or from a residential land use, a fiscal/economic impact analysis shall be completed to ensure that the change is fiscally and economically beneficial to the City. The City shall also determine if the change will result in a residential land use inventory that is insufficient to meet the City's Regional Housing Needs Allocation.

4. The City may consider entering into development agreements, whereby residential developers would be assured of a specific number of permit allocations over a multi-year period in return for providing infrastructure improvements and other public amenities.
5. Encourage the use of site development techniques which ensure that a good mix of housing types is provided through such methods as inclusion of duplexes on corner lots in low-density areas where they can be made to be compatible with surrounding development.
6. Plan and coordinate residential development in close proximity to planned urban facilities and services such as schools, parks, sanitary sewer, water, storm drainage, circulation network, transportation facilities and commercial centers.
7. Promote comprehensively planned and high quality building and site design for multi-family developments with the following criteria:
 - Exterior Elevations – Use design features such as offsets, balconies, projections, landscaping or similar elements to preclude large expanses of uninterrupted building surfaces.
 - Building, Parking, Walkway Separation – Provide privacy, light, air, and access to dwellings within the development by ensuring adequate distances among buildings, parking lots and driveways, and walkways.
 - Open Space, Landscaping, and Screening – Designate private open space exclusive of required setbacks, right-of-way, and easements within each development for the use of residents. Open space, landscaping and screening should provide outdoor space for the residents and mitigate negative impacts related to land use compatibility between the development and adjacent land uses, noise, lighting, parking (screening and shading), on-site traffic circulation, and preservation of natural features.
 - Energy Efficiency – Encourage the following measures: 1) appropriate landscaping materials to provide shade in the summer and protection from the weather in winter; 2) eaves, canopies, awnings, along south and west elevations; and 3) secured bicycle storage areas with lock-up capabilities.
8. Advocate the distribution of low and moderate income housing throughout the community and on smaller sites.
9. Encourage development of housing for seniors and other special populations (i.e., developmentally disabled and physically handicapped). Locational criteria for these development proposals, at a minimum, should include proximity to health care, recreation/cultural, and/or commercial facilities; and, aesthetic quality of area, including noise impact compatibility and open space.

10. In order to avoid over concentration of multifamily dwelling units, they should be spread throughout the community, integrated as part of overall neighborhood planning, and be in concentrations consistent with Policy 20.
11. Encourage planned unit residential developments according to the following criteria:
 - For mixed-use developments which include a Convenience Center or a Neighborhood Center, the minimum site area shall be 10 acres. Sites less than 10 acres may be considered upon recommendation of the Planning Commission.
 - Common usable open space, exclusive of right-of-way and required setbacks shall be encouraged to the greatest extent possible for recreation and open space purposes.
 - Existing natural features shall be preserved and enhanced consistent with the Conservation, Open Space, Parks and Recreation Element.
 - Density shall not exceed the underlying zoning provisions. Density increases may be granted in accordance with the Zoning Ordinance such as density bonuses, infill projects or affordable housing.
12. Identify residential areas adjacent to roadways and other noise-sources. (i.e., railroads, airport, industry) which require setbacks and/or special soundproofing to reduce negative noise-related impacts, as identified in the Noise Element. Mitigation measures shall include the following:
 - The performance standards of the City's Noise Element.
 - Noise mitigation "packages" including the use of setbacks to ensure that the exterior noise levels at the closest building façade do not exceed 65 dB Ldn and interior noise exposure of 45 dB Ldn or below.
 - For multifamily development, site design techniques shall be used to reduce the need for supplemental noise mitigation requirements. Also, investigate the feasibility of requiring greater setbacks for multifamily residential development along arterials and collectors as an alternative to walls and fences.
13. Develop design measures to buffer residential development from non-residential land uses. These measures should, at a minimum, include setbacks; roadways; community waterways; landscaping; and landforms such as berming, fences and walls.
14. Encourage higher density residential development near employment centers, commercial development and parks.

15. Provide for the continued viability of existing single-family areas in the downtown of the community and encourage medium and high-density residential development in the central business district where such uses do not conflict with existing neighborhoods.
16. Require special site development standards for proposed non-residential or more intensive land uses adjacent to established residential areas to minimize negative impacts on abutting properties.
17. Rural Residential areas shall be designated to provide opportunities for residential dwelling in conjunction with small-scale farming and animal husbandry or in a semi-rural setting. Rural Residential development (6 persons per acre - up to 2 dwelling units per gross acre) shall be directed to areas where:
 - All urban services (i.e. storm drainage, schools, sidewalks, lighting) may not be required;
 - Adjacent to long-term agricultural areas where more intensive future urban development is unlikely because of public safety conflicts such as the airport protection area;
 - Boundaries between dissimilar land uses (i.e., industrial to residential in the northeast and agriculture to residential in the south); and
 - In areas where the viability of large-scale agriculture may ultimately be threatened due to the encroachment of non-agricultural uses, and which do not warrant designation to a higher density.

Subject to the following minimum conditions:

- a. Full road, sewer, and water improvements shall be installed.
- b. Development setbacks and buffering will ensure that there will be no conflicts with adjacent rural residential uses.

One half-acre lot shall be allowed in the Residential Estate (R-E) zone through the approval of a conditional use permit if the city determines that the size or shape of the site limits the development of a standard size subdivision or the approval of 1/2-acre parcels would facilitate infill development.

18. Continue to encourage comprehensively planned Low Density Residential development (up to 21 persons/acre - 2 to 10 dwelling units net acre). Developments in excess of 7 units per acre may be permitted through the PD process.
19. Promote Medium Density Residential development (up to 40 persons per acre - 10 to 15 dwelling units per net acre) which typically consists of duplex, triplex and four-plex development for in-fill or new development at Local/Collector and/or Collector/Collector intersections to a maximum

of 50 units in one contiguous development on sites ranging from 3.5 to 5 acres. Medium Density Residential developments on sites less than 3.5 acres at arterial/collector intersections may also be considered. Medium density developments may be permitted on corner lots in single-family zones where they can be provided in conformance with Policy 18. Medium density residential developments may also be used in infill areas where they can be made to be consistent with adjacent properties through the PD process and contract zoning.

20. Locate High Density Residential development (up to 58 persons per acre - 15 to 29 dwelling units per net acre) throughout the City at arterial and Collector locations according to the following criteria:

- Arterial intersections - 100-unit maximum on sites ranging from 3.5 to 5 acres;
- Arterial/collector intersections - 75-unit maximum on sites ranging from 2 to 5 acres;
- Mid-block arterials - 50-unit maximum on sites ranging from 1 to 3 acres;
- Downtown - at in-fill locations, which do not jeopardize the viability of existing single-family areas; and
- High-density residential developments may also be used in in-fill areas where they can be made to be consistent with adjacent properties through the PD process and conditional zoning. Consistency and compatibility with adjacent properties shall be evaluated based on issues including but not limited to: adjacent zoning, adjacent land use, proposed building mass, and the adequacy of public facilities available to the site.

Densities in excess of 20 units/acre will be reviewed on a case-by-case basis and may be approved through the PD process where measurable community benefit is demonstrated and where infrastructure, including mass transit facilities, is available (or can be made available) to accommodate impacts of increased density.

7.3 Commercial Land Use

Objectives

- A. Ensure the continued viability of Avenal's existing commercial areas.
- B. Designate appropriate and sufficient commercial land for Avenal's needs to the year 2025 with appropriate phasing.
- C. Investigate and implement methods of accelerating the project review process for commercial and industrial development proposals which generate employment opportunities.

Policies and Standards

1. Ensure that future commercial development is concentrated in shopping districts and nodes to discourage expansion of new strip commercial development.
2. It shall be a priority of the City to develop commercial land along Skyline Boulevard.
3. Encourage convenience commercial development in residential areas that serve the needs of the area and include site development standards which minimize negative impacts on adjacent properties.
4. Development standards for the interface between commercial or office uses and residential uses shall be as follows:
 - A landscaped setback of at least ten feet wide containing deciduous and evergreen trees shall be planted and maintained along the property line between commercial or office uses and residential properties that have a common property line.
 - A masonry wall eight feet in height shall be erected along the property line where commercial and office uses have a common property line with residentially designated properties.
 - A masonry wall three and one-half feet in height or landscape berm shall be erected along the front setback line, parallel to, and ten feet from the local streets abutting planned residential uses.
 - Commercial loading and storage areas shall be screened from view of adjoining residential property by a combination of landscape planting and a masonry wall. Loading areas shall be located so that there are no noise impacts to adjacent residential properties. All storage shall be within an enclosed structure.
 - Roof-mounted and detached mechanical equipment shall be acoustically baffled to prevent noise from the equipment from exceeding 55dB (A) measured at the nearest residential property line.
6. In order to encourage the integration of Neighborhood and Community Commercial uses into neighborhoods, designs should de-emphasize the usage of walls as buffers where they create barriers to pedestrian access. Continuous block walls shall be discouraged and offsets, landscaping pockets and openings shall be encouraged.
7. In order to promote non-vehicular modes of transportation, and to limit the unnecessary usage of Collectors and Arterials for vehicular access, commercial development shall provide direct pedestrian and vehicular access to adjoining residential areas through Minor Collectors, Local Streets and/or through pedestrian access points.

8. Designate Convenience Centers for personal and convenience goods and services for nearby residential areas. Such centers may be in new, in-fill, and/or consolidated existing strip commercial developments and at a scale which is compatible with surrounding residences. Special site design standards shall be imposed on these facilities, including high quality architecture, landscaping, signage and lighting to ensure that they are aesthetically pleasing.

Convenience Centers may be approved by a planned development permit on the corner of arterial/collector intersections on sites of three acres or less, and at least one-half mile away from neighborhood shopping centers. Where possible, such centers are to be developed as part of specific plans or master plans.

9. Designate Neighborhood Centers for shopping centers with a major grocery store as an anchor and supporting businesses which serve a one square mile residential area. Location shall be at one corner of arterial/arterial or arterial/collector intersections on sites of approximately 10 acres in area. Centers shall be located no closer than approximately one mile from other General Plan-designated neighborhood centers, from existing Grocery stores, or from General Plan-designated community centers.

The center's scale and site design must be compatible with the surrounding residential area with an emphasis on access, circulation, parking, signage, noise, and landscaping. Where possible, these facilities should be planned and integrated into neighborhoods as part of a specific plan or master plan.

10. Preserve and enhance the Central Business District (CBD) as the community's historic services center. Promote retail commercial, specialty retail, professional/administrative office, personal services, professional services, public and community facilities and urban residential uses.

7.4 Industrial Land Use

Objectives

- A. Promote industrial sites which are functional, have adequate public services and have access to major streets.

Policies and Standards

1. Promote a mix of industrial uses that provide the City with a sound, diverse industrial base.
2. Provide adequate land for a wide range of industrial uses. In order to increase the capture rate of industries in the community, industrial areas should be master planned to expedite processing of applications and aggressively marketed (along with the industrial park) to targeted industries, including the I-5 Industrial Park.
3. Industrial development should not create significant off-site circulation, noise, dust, odor, visual, and hazardous materials impacts that cannot be adequately mitigated.

4. Prepare a specific plan for the industrial area near Interstate 5 to provide for an adequate mix of parcel sizes, identification of needed infrastructure and transportation routes.
5. In order to achieve a high-quality natural environment, it shall be the policy of the City to encourage industries which demonstrate minimum air and water quality impacts and to discourage air and water quality impacts which cannot be offset.

7.5 Public and Institutional Land Use

- A. Provide sites for adequate public facilities to serve projected growth.

Policies and Standards

1. Update the water, wastewater and storm drainage master plans, and any other specific or master plans related to infrastructure development on a periodic basis.
2. Annually monitor the need for law enforcement, fire and other emergency services personnel as the City grows.
3. Implement a recycling and source reduction program to promote recycling.
4. Continue to plan and provide efficient public safety and leisure/cultural facilities and services for the community.
5. In considering development proposals which have the potential to affect school capacity, the City shall refer such proposals to the Reef-Sunset Unified School District for review and comment to ensure that adequate school facilities are implemented to serve the proposed developments. Developers should mitigate impacts to schools in accordance to School District plans.

Objectives

- A. The City shall coordinate the location of school sites in the community with the school district in an effort to assist the school district in providing school facilities at the optimum locations and in a timely manner.
- B. Provide transportation and recreation opportunities near schools.
- C. Promote schools as focal points for neighborhood areas and as planning elements for new growth areas.

Policies and Standards

1. Coordinate school location and site design with the school district according to the following guidelines to ensure that adequate facilities are available.

Elementary Schools

Description: Facilities for 500 to 750 students in grades K through 5.

Location: Interior residential areas at a collector/local intersection. Additional street frontage is desired for transition area to adjacent residences. Abuts neighborhood park with adjacent development backing or siding onto school. Maximize pedestrian and bicycle access and on/off circulation.

Service Area: ½-mile radius to serve a population of 5,000 to 8,000.

Site Area: 15 to 20 acres.

Facilities: Approximately 20 classrooms, administration building, library, multi-purpose building (lunches, recreation, and community meetings), multi-purpose recreation/open space with hard-court play areas and equipment, off-street parking, bus loading/unloading area, and bicycle storage area. Security fencing separates buildings from play areas. Public use of play areas is encouraged.

Middle Schools

Description: Facilities for 700 to 1,000 students in grades 6 through 8.

Location: Residential areas with central location for surrounding elementary schools at collector/collector or collector/local intersections. Additional local street frontage desired for transition to adjacent residential areas. Maximize pedestrian and bicycle access and on/off-site circulation.

Service Area: Approximately six elementary schools.

Site Area: 25 to 30 acres.

Facilities: Approximately 30 classrooms and labs; administrative center, library/media center; multi-use buildings, (cafeteria, band, chorus, shops, labs); athletic facilities for football, baseball, track; off-street parking; bus loading/unloading area; and bicycle storage area. Security fencing separates buildings from athletic fields. Public use of athletic fields is encouraged.

High Schools

Description: Facilities for 1,000 to 1,400 students in grades 9 through 12.

Location: Arterial-collector intersection with additional frontage on two other streets. Prefer same collector as area middle school.

Service Area: Coincides with district service boundaries.

Site Area: 50 to 60 acres.

Facilities: Approximately 40 classrooms and labs; library/media center; administration building; gym; cafeteria; standard outdoor athletic facilities; off-street parking, bus loading/unloading; bicycle storage area. Security fencing separates buildings from athletic fields/facilities. Public use of athletic areas is encouraged.

2. Discourage and restrict commercial development that conflicts with school facilities.
3. Restrict development of High Density Residential complexes abutting school sites.
4. Work with the school district and other area schools to develop and administer land use planning curriculum.
5. The school district shall coordinate its school location, facility construction and phasing with the City's development guidelines contained in the General Plan and the City's Capital Improvement Program to ensure that school facilities are located in areas where there are planned and programmed streets, sewerage, storm drainage systems and other necessary infrastructure.

8.0

COMMUNITY DESIGN ELEMENT

8.0 COMMUNITY DESIGN ELEMENT

Introduction

The Community Design Element brings together the physical elements and design features of Avenal, thereby establishing a strong sense of place and local identity. The unique characteristics that define the community are protected and encouraged in this element. Residential, commercial and industrial design as well as landscaping, streetscape, focal points, boundaries and vistas are addressed.

Purpose of the Community Design Element

The Community Design Element addresses the conservation and enhancement of the visual quality of the Avenal environment. New development and redevelopment create pressure on the natural and historic resources in Avenal that form the community's unique character. The Community Design Element helps to preserve and improve the quality of life in Avenal by addressing: the protection of natural resources; the preservation and enhancement of the historical character of the community; the harmonious incorporation of new development into existing public and private development; and the maintenance of the community's "small-town, rural atmosphere."

Scope and Content of the Community Design Element

The Community Design Element is not a State-mandated element, but is an important component of the Avenal General Plan. The Element comprises four sections: this Introduction; the Purpose of the Community Design Element; the Scope and Content of the Community Design Element; and Objectives, Policies and Standards. In the Objectives, Policies and Standards section, major issues related to the preservation and enhancement of the character of the community are identified and related policies and standards are established to address these issues.

8.1 Gateways/Streetscape Design

Objective

A. Improve the appearance of city streets.

Policies and Standards

1. Promote a city-wide street tree planting program which enhances the appearance of the street and is scaled in relationship to the function of the roadway. Tree wells shall be located and designed to ensure adequate sight distance for traffic and pedestrian safety.
2. The undergrounding of utilities along the City's main corridors is a priority. In developing areas, new development projects shall place all new utility lines underground. The City will also explore a range of options for undergrounding utilities in existing developed areas.
3. Preserve and protect views of the coastal mountains from the City's major roadways. Local streets should also be oriented to maximize such views.
4. Ensure all signs are compatible with the overall streetscape design including the redesign/removal of signs, which are disruptive elements.
5. Outdoor advertising billboards shall not be allowed within the City limits.
6. Establish coordinated, distinctive and high quality signage, accent plantings and paving materials for entries into the City. Locations for this treatment include Skyline Boulevard, SH 33, Kings Street and City Arterial Streets. As primary entrances to the City, these streets should reflect higher standards of development. Standards should contain provisions for minimum building setbacks, landscaping, sidewalk pattern and street furniture, with distinctions made between upgrade of existing uses and new development. Proper orientation, design and architectural features shall be regulated through zoning and the site plan review process.
7. A special design overlay shall be developed for the Skyline Boulevard corridor which includes the following features:
 - a. For new developments, landscape setbacks should be 20 feet, where existing development does not preclude.
 - b. A street tree standard shall be adopted for the segment including large trees indigenous to the area including Sycamore, Poplar, and occasional seasonal color should be provided by Red Buds, Ginkgo and others. Trees should be planted in clusters to provide adequate view windows to commercial development along Skyline while achieving dense plantings at key locations.

- c. Intersecting streets should have special entry treatments including low retaining walls with ornamental planting, commercial center signage integrated into the entry, and design features that provide interest such as rock outcroppings, river rock or other means.
- d. Specific designs shall be approved as part of the overall master plan or specific plan for the development.

8.2 Residential Development

Objective

- A. Improve the appearance and condition of existing residential areas.

Policies And Standards

- 1. Continue to use Community Development Block Grant funds for housing conservation areas to rehabilitate existing dwellings.
- 2. Pursue removal of vehicles on residential property, which are abandoned, unregistered or in a state of disrepair. Existing City codes pertaining to abandoned vehicles shall be enforced.
- 3. Review the adequacy of existing Zoning Code enforcement procedures pertaining to property maintenance.
- 4. Encourage growth patterns that will promote livable neighborhood development principles including the following:
 - a. Providing compact development so that vehicle use is reduced to the extent practicable, and so that vehicle trips are shorter.
 - b. City neighborhoods (one square mile area) should have a mix of land uses including housing, schools, small shops and neighborhood shopping centers. Residential uses should be clustered within walking distance of commercial and service facilities.
 - c. Neighborhoods should be designed as suburban “villages” with connectivity consistent with the circulation element’s policies.

Objective

- B. Promote high quality new residential neighborhoods.

23. The City shall encourage the development of middle and upper price range housing to increase housing opportunities for all economic segments of the community. The Residential Estate land use designation shall be used to encourage and preserve such housing types.

8.3 Commercial and Industrial Development

Objective

- A. Ensure that all commercial and industrial development is attractive and of high-quality design, to enhance the image of the city.

Policies and Standards

1. Establish site plan review procedures for all commercial and industrial development, including provisions for building setbacks, lot coverage, parking, access and circulation, outdoor lighting, signage and landscaping.
2. Promote rehabilitation of appropriate commercial sites and investigate funding opportunities for rehabilitation/remodeling of small businesses.
3. Site plans shall provide safe and well-defined pedestrian connections from buildings to parking areas, from buildings to the adjoining street(s), and among buildings on the same site. Pedestrian connections between commercial development and surrounding residential neighborhoods should also be provided.
4. Buildings, sidewalks and parking lots should be located to minimize conflicts between pedestrian and vehicular circulation on a site.
5. Loading and trash facilities shall be located where they may be adequately screened from view (generally at the rear of the structures, away from the street).
6. Long expanses of fence shall be offset and architecturally designed to prevent monotony, and shall include landscaped pockets and limited openings.
7. Promote rehabilitation of appropriate industrial sites and investigate funding opportunities for rehabilitation/remodeling of small businesses.
8. Site design for new industrial development shall consider the following:
 - a. Controlled site access;
 - b. Service, storage, and loading areas located at the rear or side of buildings;
 - c. Screening of storage and outdoor work areas and equipment;

- d. Landscaping, signage and other features to emphasize the main entrance; and
 - e. Landscaping for all areas not developed for parking, storage, buildings, etc.
9. Design elements which are undesirable and should be avoided include:
- a. Large, blank, flat wall surfaces;
 - b. Exposed, untreated precision block walls;
 - c. Chain link fence and barbed wire;
 - d. False fronts;
 - e. "Stuck on" mansard roofs;
 - f. Materials with high maintenance (such as stained wood, shingles or light gauge metal siding);
 - g. Mirror window glazing;
 - h. Loading doors facing the street; and
 - i. Exposed roof drains.
10. Where industrial development abuts non-industrial uses, appropriate buffering techniques shall be employed such as setbacks, screening landscaping, or some combination of these.
11. An industrial site shall accommodate all of its required parking on-site without the use of on-street parking.
12. On-site circulation shall be designed to provide safe and efficient access for delivery vehicles, visitors and employees, and pedestrians.
13. Loading and delivery areas shall be clearly marked with directional signage where multiple access points are provided.
14. Loading areas shall be designed to accommodate trucks without them having to back onto or otherwise use the adjoining street when feasible.
15. When security fencing is required, it should be a combination of solid pillars, or short solid wall segments, wrought iron grillwork and not include barbed wire.
16. Priority should be given to development in the downtown.

17. New development should conform to the Redevelopment Agency's Art-Deco theme design guidelines.

9.0

PUBLIC SERVICES AND FACILITIES ELEMENT

9.0 PUBLIC SERVICES AND FACILITIES ELEMENT

The Public Services and Facilities Element addresses the community need for public services and facilities. The urbanized portion of Avenal is developed and sufficiently served by existing public services and facilities. Future development of vacant land within the City will require expansion of public services and facilities to meet the increase in demand for service. Planning for this future increase in demand will ensure that the needs of future residents for public services and infrastructure are met, while avoiding adverse impacts to the existing community.

Purpose of the Public Services and Facilities Element

The purpose of the Public Services & Facilities Element is to ensure that sufficient levels of public services are provided as Avenal develops. Working in conjunction with the Land Use and Economic Development Elements, the Public Services & Facilities Element plans for the needed expansion and funding of public services and infrastructure to coincide with new development.

Scope and Content of the Public Services and Facilities Element

The Public Services & Facilities Element is not a state-mandated element. The issues addressed within this Element closely relate to the Land Use Element and Economic Development Element. The Element is comprised of four sections: the Introduction; Purpose of the Public Services & Facilities Element; Scope and Content of the Public Services & Facilities Element; and the Objectives, Policies and Standards. In the Objectives, Policies and Standards section, major issues related to the provision of public services and facilities are identified and related policies and standards are established to address these issues. The objectives, which are overall statements of the community's desires, are comprised of broad statements of purpose and direction. The policies and standards serve as guides for infrastructure and facility improvements to provide sufficient levels of service.

9.1 Public Facility Improvement

Objective

- A. It is the policy of the City that new growth shall pay its own way. Fees shall be established to pay for both needed facilities, and incremental demands on existing facilities.

- B. A master plan for the development and funding of necessary services and utilities (including but not limited to storm drainage, water and sanitary facilities) shall be developed and adopted. Funding can be through the formation of an assessment district, entering into deferral agreements or direct developer funding of improvements. Distribution of cost for improvements shall be done in a fair and equitable manner.
- C. Facilities and services shall be consistent with the General Plan land use goals and policies.

Policies and Standards

1. The City shall investigate methods for acquiring additional water from the California Aqueduct or other sources.
2. Prepare and implement Citywide infrastructure master plans which carry out adopted land use goals, objectives and policies and federal and State regulations. These master plans shall be implemented through various funding mechanisms including assessment district, property owner's associations, user fees, development impact fees, mitigation payments, reimbursement agreements and/or other mechanisms which provide for equitable distribution of development and maintenance costs.
3. Require the extension and construction of infrastructure to proposed developments according to adopted elements and master plans. The City shall use reimbursement agreements or other financing techniques to reimburse developments for any oversizing cost, which may be required.
4. Coordinate urban growth management planning with public and private utilities.
5. Design storm water runoff drainage structures to decrease erosion.
6. Development fee credit may be given for public improvements made by a builder but shall not exceed the amount of fees.
7. Developers shall construct all tributary facilities necessary to connect to major infrastructure facilities, whether or not the major facilities have yet been constructed.
8. Upon the collection of adequate funds, the City will install major facilities in accordance with the master plan at the locations deemed most essential by the City, with due regard for community needs and areas from which fees were collected. To make the best use of funds, growth shall be encouraged in areas where it is possible to develop facilities incrementally.
9. New development shall demonstrate that adequate sewerage capacity and sewage treatment capacity exist prior to development or that conditions of project approval will ensure adequate capacity will be created as part of the project prior to the issuance of building permits. Conditions may include installation of necessary facilities or other methods acceptable to the City.

10. The City shall require industrial sewage pretreatment for dischargers that have high biological treatment demands. Water conservation measures should also be encouraged for industrial, commercial and residential uses to preserve hydraulic capacity at the treatment plant and to reduce impacts to the sewerage system.
11. The City shall require the connection of existing and new business, residents, and industries to the City's water and sewer system. The City shall establish fees, which enable it to recover the costs of such connection.
12. Conditions of approval shall be implemented with each development to assure that the necessary water production, distribution and/or treatment facility is in place prior to issuance of a building permit.
13. Conditions of approval shall be implemented with each development to assure that the necessary sewer collection facility is in place and/or wastewater treatment plant capacity is available prior to issuance of a building permit.
14. Monitor treatment plant operations and consider the related effects of land use changes when evaluating plan amendments.

9.2 Local Government Facilities and Services

Objective

- A. Provide high quality government facilities and services to the general public. Local government facilities and services shall be directed to the Central Business District of the community to the greatest extent possible.

Policies and Standards

1. Maintain innovative solid waste service and programs.
2. The City's Capital Improvement Program shall be adequate to meet future growth and development needs in conformity with the goals, objectives and policies of the General Plan.

The first part of the report is a summary of the work done during the last year. It covers the main areas of research and the results of the experiments. The second part is a detailed description of the experiments and the results. The third part is a discussion of the results and the conclusions. The fourth part is a list of references.

The work done during the last year has been very successful. The results of the experiments are very good and the conclusions are very clear. The list of references is very complete.

10.0

URBAN BOUNDARY ELEMENT

10.0 URBAN BOUNDARY ELEMENT

Introduction

Since it was originally incorporated in 1979, Avenal has grown to an estimated 2005 population of approximately 9,486 persons. The General Plan includes an assumption of relatively high population growth, to about 16,039 persons, by the year 2025. The City's growth has been located within the present City boundary and concentrated in a northwest to southeast direction. Future growth is also planned for the northwest and southeast areas of town.

Purpose of the Urban Boundary Element

The purpose of the Urban Boundary Element is to define the limits for extending City services and infrastructure so as to accommodate new development anticipated within the time frame of this General Plan. The element includes 10-year growth rings (boundaries) starting with the year 2015, 2025 (Sphere of Influence), 2035, and the outer boundary which is the Planning Area. Reference the map pocket for the Land Use and Urban Boundaries map.

Scope and Content of the Urban Boundary Element

The Urban Boundary Element is not a state-mandated element. It is, however, an important element because it limits leap-frog development and provides for an orderly transition from rural to urban land uses. The element comprises five sections: the Introduction; Purpose of the Urban Boundary Element; Scope and Content of the Urban Boundary Element; Objectives, Policies and Standards; and the Urban Boundary Map. The Policies and Standards section establishes boundaries for new development over the next 30 years. LAFCo's guidelines for Spheres of Influence and Planning Areas is also included.

10.1 Urban Boundaries

Objective

- A. Provide for an orderly and efficient transition from rural to urban land uses.
- B. Minimize urban sprawl and leap-frog development.

C. Designate growth areas that can be served by logical infrastructure extensions.

Policies and Standards

1. First priority shall be given to development of vacant, underdeveloped, and/or redevelopable land where urban services are or can be made available.
2. Identify and use natural and man-made edges, such as local roadways, as urban development limits for growth phasing lines.
3. Utilize low density and rural residential land uses as a buffer and transition between long-term agricultural uses and higher density urban development.
4. Prohibit the premature conversion of agricultural lands where agricultural preserves are present.
5. Encourage the use of parks and open space to enhance gateways to the City.
6. Discourage new or expanded urban development outside of the city's Sphere of Influence.

10.2 Growth Policies

Objective

- A. Implement growth policies, which will guide the timing, type, and location of growth, preserve resource lands, protect natural features and open space, and encourage techniques which encourage energy conservation.

Policies and Standards

1. Establish a Planning Area Boundary around the City to represent a potential 50-year growth boundary with an additional appropriate buffer and/or greenbelt area. This area should include any "areas or communities of interest" that may affect the City.
2. Establish growth phasing boundaries for the logical, sequential development of the community over the next 30 years. These boundaries shall be established based on the following factors:
 - a. Adequate residential, commercial and industrial capacity for the planning period.
 - b. Inclusion of a 30 percent vacancy factor ("flexibility factor") for residential land; that is, at least 30 percent additional land shall be provided than needed.
 - c. Inclusion of at least a 50 percent vacancy factor ("flexibility factor") for non-residential land; that is, at least 50 percent additional land than needed.

- d. Adequacy of infrastructure including existing and planned capacity of sewerage system, treatment plant, water system, schools, roadways, and other urban services and facilities.
3. Amendment of the growth boundaries shall be accomplished by a General Plan Amendment.
4. Provide for orderly growth and development patterns through the designation of growth boundaries to be phased over time. The growth boundary may be expanded through a General Plan Amendment upon the following findings:
 - a. That at least 80 percent of the residential area within the boundary has been developed, or that undeveloped land within the boundary provides less than a ten-year supply of residential, or less than a 20-year supply of commercial, industrial or public land uses.
 - b. That adequate infrastructure exists in the expansion area, or will exist upon development.
 - c. That the expansion area is not larger than the area necessary to provide an adequate supply of residential, commercial, public and industrial land uses, plus an adequate vacancy factor.
5. Expansions of the growth boundary shall be substantially contiguous to existing development in the community. To be “substantially contiguous,” boundary expansions shall have at least 35 percent of the boundary expansion area contiguous to the existing boundary.

1. The first part of the report is a summary of the work done during the year. It includes a list of the projects completed and a brief description of each project.

2. The second part of the report is a detailed description of the work done on each project. It includes a list of the tasks completed and a brief description of each task.

3. The third part of the report is a list of the results of the work done. It includes a list of the projects completed and a brief description of each project.

4. The fourth part of the report is a list of the conclusions drawn from the work done. It includes a list of the projects completed and a brief description of each project.

5. The fifth part of the report is a list of the recommendations made. It includes a list of the projects completed and a brief description of each project.

6. The sixth part of the report is a list of the references used. It includes a list of the projects completed and a brief description of each project.

7. The seventh part of the report is a list of the appendices. It includes a list of the projects completed and a brief description of each project.

8. The eighth part of the report is a list of the index. It includes a list of the projects completed and a brief description of each project.

9. The ninth part of the report is a list of the glossary. It includes a list of the projects completed and a brief description of each project.

10. The tenth part of the report is a list of the bibliography. It includes a list of the projects completed and a brief description of each project.

11. The eleventh part of the report is a list of the acknowledgments. It includes a list of the projects completed and a brief description of each project.

12. The twelfth part of the report is a list of the conclusions. It includes a list of the projects completed and a brief description of each project.

13. The thirteenth part of the report is a list of the recommendations. It includes a list of the projects completed and a brief description of each project.

14. The fourteenth part of the report is a list of the references. It includes a list of the projects completed and a brief description of each project.

CHAPTER ONE - INTRODUCTION

1.0 Project Location and Description

The City of Avenal is located along State Highways 33 and 269 in Western Kings County in the Southern San Joaquin Valley. State Route 33 runs in a general northwest-southeast direction through the southern side of town and State Route 269 starts at State Route 33 and runs through the center of town to the north. Interstate 5 is just north of town and is the main transportation artery in the state. Incorporated as a General Law City in 1979, Avenal is located approximately 33 miles southwest of Hanford, the County seat, and 58 miles south of Fresno. The current population, according to the Department of Finance (DOF), is 15,350 as of January 1, 2003. This includes the Avenal State Prison incarcerated population of 7,062. Subtracting the total population from the institutionalized population gives the City of Avenal a 2003 population of 8,288. Avenal's economy is based on oil, agriculture and the service industry. The City limits currently contains 19.5 square miles of which, 2.5 square miles is urbanized.

This General Plan Update will cover a 20-year period, from 2005 to 2025. At that time, Avenal is expected to have a population of approximately 16,039 (not including prison population).

While many residents cherish the "small town" character of the City, they also find commercial and recreational opportunities limited because of the City's size. The General Plan Update will include, in addition to more traditional topics and issues, modified land use controls that will focus economic development to capture lost sales tax revenue currently generated by Avenal residents shopping outside of the City, and increase employment and housing opportunities. The City's public infrastructure will also be evaluated and the means to finance its expansion will also be evaluated.

The determination of the Planning Area boundary for the General Plan Update was guided by the following factors:

- Existing extent of development in the area, including unincorporated areas, and contiguous undeveloped parcels.
- Location of agricultural land under the Williamson Act contract.
- Hard edges including major roadways.
- Undeveloped areas necessary to square off the development boundaries.
- Areas within which the City may likely grow over the next 20 years.
- Agricultural areas that are key elements of Avenal's economy.

Figure 1.0-1 shows the City's current growth boundaries including the City limits and the adopted Sphere of Influence (SOI) and Planning Area boundary.

The Planning Area includes lands within Avenal's city limits and possible SOI. The Planning Area, which is almost co-terminus with the city limits, contains about 20.5 square miles.

Almost one-half of the Planning Area is located in the Kettleman Hills. This area is unsuitable for development because of steep slopes and unstable soils, a lack of services and infrastructure, the existence of rare and endangered plant and animal species, hazardous seismic conditions, ownership of the land by the federal government, and/or the land being under the Williamson Act contract. Another constraint to development in this area involves the extensive ownership of land by the oil companies, approximately five square miles. An extensive system of roads, pipelines, wells and buildings have been constructed on these lands. Dismantling this system for the purpose of developing the property would be cost-prohibitive and environmentally, ill-advisable.

About 40 percent of the Planning Area is located on the Kettleman Plain, west of Kettleman Hills. This portion of the Planning Area contains the urbanized area of the City of Avenal and the Avenal State Prison.

The remaining portion of the Planning Area is located in the San Joaquin Valley, east of the Kettleman Hills. It is traversed by Interstate 5 and the California Aqueduct.

The Planning Area includes sufficient area to meet the City's land development needs over the planning period of 20 years and a geographical territory to enable City review of development proposals that may occur in the County adjacent to the City limits. Its long-range purpose is to serve as the catalyst for future planning discussion and vision. The Planning Area also provides sufficient flexibility to review alternative growth scenarios that would focus growth in either the eastern or western sections of the community, along State Route 33, or other alternatives identified by the community.

1.1 Land Use

1.1.1 PRESENT AVENAL GENERAL PLAN

The City of Avenal General Plan is the current comprehensive plan governing the community. The General Plan includes the Land Use Element, Circulation Element, Conservation, Open Space, Parks and Recreation Element, Noise Element, and Safety Element, all comprehensively updated in 1992. The Housing Element was updated in 2004. Used as a guide for orderly development, Avenal's Land Use Element designates the general distribution of land for residential, commercial, industrial, and public facilities needed to serve the residents of the City. The Plan includes land outside the City's boundaries, providing a comprehensive growth and development plan. Figures 1.1-1a and 1.1-1b show the current General Plan land use designations within the Planning Area. Table 1.1-1 shows the distribution of land use as designated in the General Plan.

Figure
1.1-1b

Table 1.1-1
Existing General Plan Land Use (Acres)
City of Avenal

General Plan Land Use Category	Acres
Low Density Residential	366
Medium Density Residential	537
High Density Residential	54
Community Commercial	61
Downtown Commercial	8
Service Commercial	7
Highway Commercial	169
Park	15
Scenic Corridor	42
Nature Preserve	243
Extensive Agriculture	7,801
Industrial	1,764
Public Facility	372
State Prison	223
Residential Reserve	150
Total	11,812

1.1.2 PRESENT CITY LAND USE CONTROLS

Lands within the City limits are governed by the Avenal Zoning Ordinance. The Zoning Ordinance is used to implement the General Plan. It divides the City into zones and prescribes regulations relating to land use, the size of the building allowed on the land, and the height and intensity of use. Changes to zone boundaries must be consistent with the General Plan. Like the General Plan, the Zoning Ordinance is periodically amended to reflect changes in urban development standards.

1.1.3 EXISTING LAND USE IN THE SPHERE OF INFLUENCE

The current City limits contain approximately 19.5 square miles, of which 2.5 square miles is urbanized. A windshield survey of the Planning Area was conducted in April, 2004 (by Quad Knopf, project consultant) and included all parcels within the Planning Area. Table 1.1-2 indicates that the existing land uses within the City limits include 437 acres of residential, 112 acres of commercial, 519 acres of industrial, 15 acres of parks/open space, 298 acres of public facilities/Quasi-public facilities and 5,254 acres of vacant/undeveloped land. The majority of vacant/undeveloped land is in the Kettleman Plains north of Avenal. Figures 1.1-3(a) and 1.1-3(b) illustrate the distribution of these uses.

**EXISTING LAND USE
PLANNING AREA/SOI**

**Figure
1.1-3(a)**

As with most cities in the San Joaquin Valley, the detached single-family home is the predominant residential unit in Avenal.

1.1.4 KINGS COUNTY GENERAL PLAN AND ZONING ORDINANCE, IMPLICATIONS

Kings County is responsible for planning and land use control in the unincorporated areas of the County. Urban development is to be directed by County policy towards existing cities and urbanized areas.

The Kings County General Plan uses an urban centered concept to direct urban expansion toward cities and unincorporated communities to accomplish anticipated urban expansion in an orderly manner, based on the ability of the communities to furnish public services along with land needs based on population demands and in balance with employment-generating land uses. As a planning tool, an SOI is intended to accommodate all classifications of urban land use. It is a boundary line that is recognized by the Local Agency Formation Commission (LAFCo) as the ultimate growth boundary of the community over the life of the General Plan, and all land within the SOI is planned for eventual development in a mixture of urban and urban-related uses.

1.1.5 SPHERE OF INFLUENCE

The Sphere of Influence (SOI) is defined in California Government Code Section 56076 as “a plan for the probable physical boundaries and service area of a local agency as determined by” LAFCo. Annexations to the City must be located within the SOI in order to be approved by LAFCo. By State law, the City must be notified of any proposed land use changes within its SOI and be provided an opportunity to comment on the changes. The City is in the process of adopting the Planning Area as the SOI.

The Kings County LAFCo reviews changes to SOI and Planning Area boundaries, annexations to cities and special districts in Kings County, the adequacy of public services to proposed annexations, and the effect of these actions on prime agricultural land. LAFCo has adopted local goals, objectives and policies to guide its decision-making.

Applications to amend City limits, for example, are presented to LAFCo, which then approves, approves with conditions, or denies the applications.

The conversion of agricultural lands to urban uses and the provision of urban services by growing communities are important issues to the County and LAFCo. Potential revenue losses to counties resulting from annexations have created problems in the relationship between cities and counties in California, and Kings County is no different. During the General Plan update, the implications of the post-Proposition 13 fiscal environment to the City of Avenal can be seen as an opportunity to create a more predictable revenue-expenditure model. Avenal's planned growth will, at some time, require annexation to the City. First, long range planning in the Avenal SOI will occur with a vision shared by both parties and with a revenue stream that can be relied on for the duration of the agreement. Second, an agreement will permit both parties to focus their limited resources to other matters; its absence will necessitate that the City and County coordinate their planning programs in a piecemeal fashion.

1.1.6 ESTIMATED DEMAND FOR LAND 2005 - 2025

The number of residential, commercial and industrial acres needed in the City of Avenal through 2025 is based on population projections through 2025 (reference Table 1.1-3). By 2005, the population of Avenal is estimated to be approximately 9,170 with 64 acres of residential land needed, 17 acres of commercial, and 20 acres of industrial. By 2025, the population of Avenal is estimated to be approximately 16,039, with a total of 433 acres of additional residential land needed, 30 total acres of commercial land needed, and 134 additional acres of industrial land needed. Table 1.1-4 shows the estimated added land demand between 2005 and 2025. Some of the projected land needed can be found in existing vacant land within the City. Figure 1.1-4 illustrates the land available for development in the City limits and Planning Area. This includes land that is either currently vacant or undeveloped and agricultural land.

1.1.7 OTHER AGENCIES' RELATIONSHIP TO AVENAL'S GENERAL PLAN (FEDERAL AND STATE PLANS REGARDING PUBLIC LANDS AND FACILITIES)

A number of state and federal agencies' activities have an effect on Avenal's general planning issues. These include, but are not limited to, the Central Valley Regional Water Quality Control Board, Environmental Health Department, California EPA, the San Joaquin Valley Air Pollution Control District, and the Department of Water Resources. These agencies are interested in the interaction of the General Plan with their own long-range resource management activities.

Further, many of these agencies have made technical guidelines available in order to assist the public and private sectors to manage development with natural resources in mind.

1.2 Urban Design Analysis

1.2.1 DOWNTOWN

Avenal's downtown has long been recognized as a place of opportunity as a commercial and cultural City center. However, this position is challenged by the growth of the City into outlying areas, and the difficulty of attracting and keeping thriving businesses and people in the downtown area. Reasserting the historic relationship of downtown to the growing community will be a matter of much public debate.

The size of Avenal provides its residents with short trip times and distances. For example, the location of City offices, police, fire, and other governmental functions downtown serves to reduce trip duration. The proximity of commercial services in this area, however limited, reinforces downtown's role as a center for government and commerce.

1.2.2 DESIGN REVIEW

In the City of Avenal, any project requiring a Site Plan Review Permit or Conditional Use Permit for a project that involves significant design issues and/or new construction shall be reviewed by the Design Review Committee prior to approval or denial of the above-referenced permit. Other projects may be reviewed by the Design Review Committee at the discretion of the Zoning Administrator where significant design issues are being considered. Applicants seeking a Site Plan Review permit or Conditional Use Permit, proposing to occupy existing buildings where no significant new construction is proposed would typically not be required to undergo review by the Design Review Committee.

1.3 Population and Housing

Since incorporation in 1979, the City has grown to a population of 8,288 as reported in the 2003 Department of Finance City/County population estimates. In 1980, the population of Avenal was 3,655 and by 1990 the population had increased to 9,770 (including the prison population) (reference Table 1.3-1). This was an increase of approximately 167 percent, which was higher than all other incorporated cities in the County and California's increase in population for the same time period. The explosive increase in population can be attributed to the inclusion of the Avenal State Prison population in the 1990 Census and the prison staff and their families who moved to Avenal. From 1990 to 2000, the City's population increased 50 percent to total 14,674 (including the prison population). Kings County and California's population increase from 1990 to 2000 was considerably lower at 27.6 percent and 13.8 percent respectively. Corcoran, Hanford and Lemoore's population increase from 1980 to 2000 is included for reference.

Table 1.3-1
Population Growth, 1980-2000
Avenal, Corcoran, Hanford, Lemoore, Kings County and California

	1980 Number	1990 Number	Percent Change 1980-1990	2000 Number	Percent Change 1990-2000

Source: 1980, 1990, and 2000 U.S. Census

Table 1.3-2 shows Population Estimates and Projections for Avenal and Kings County for the years 2000 through 2020. The Department of Finance estimates 8,868 persons in Avenal and 149,600 persons in Kings County by 2005 (assuming the same growth percentage for the City as the County). By 2010, Avenal is projected to have a population of 9,799 persons and Kings County is projected to have a population of 165,300 persons. The 2005-2020 figures are based on Department of Finance projections from July 1, 2000.

Table 1.3-2

Kings County	134,500	149,600	165,300	180,800	198,700	218,400

Source: 2000 U.S. Census, Department of Finance, Interim County Population Projections, July 1, 2000

¹ Assumes the same growth percentage as the County.

Table 1.3-3 shows Avenal and Kings County's Total Households, Population in Households, and Average Household Size for 1990 and 2000. In 1990, Avenal's Average Household Size was 3.46, while the County's Average Household Size was 3.08. Average Household Size in 2000 was 4.14 persons per household for Avenal and 3.18 persons per household for the County, indicating that larger or extended family/households are increasing at a faster rate in Avenal than the County.

Table 1.3-4 shows the age distribution in Avenal from 1990 to 2000. The majority of Avenal's 2000 population falls in the 25 to 34 (15.7 percent) age group. The percentage of the population in 2000 under nine years of age was 23.1 percent and the percentage of the population over 65 years of age was 4.7 percent.

1.3.1 RACE/ETHNICITY CHARACTERISTICS

Table 1.3-5 shows the ethnic composition of Avenal's population. Census data from 1990 includes the prison population and census data from 2000 does not include the prison population. The white population totaled 3,367 (42.2 percent) in 2000 while the Hispanic population totaled 6,800 (85.3 percent). The Black or African American population totaled 131 (1.6 percent) while the American Indian and Alaskan Native population totaled 84 (1.1 percent).

Table 1.3-5

²Does not include prison population.

The Hispanic population is by far the largest ethnic group in Avenal and has the highest birth rate.

1.3.2 HOUSEHOLD CHARACTERISTICS

Household Type

The U.S. Census Bureau defines a household as all persons who occupy a housing unit. This may include single persons living alone, families related by blood or marriage, as well as unrelated individuals living together. Persons living in retirement or convalescent homes, dormitories or other group living situations are enumerated separately and are not counted in household population.

Table 1.3-6 shows household characteristics for the City of Avenal. As Table 1.3-6 indicates, Family Households increased in the City of Avenal from 75.3 percent of total households in 1990 to 85.1 percent in 2000.

Non-family Households decreased from 1990 to 2000 by 9.8 percentage points, and Married-Couple Families increased 2.3 percentage points during the same time period.

Table 1.3-6
Household Type Characteristics, 1990-2000
City of Avenal

	1990		2000	
	Number	Percent	Number	Percent
Total Households	1,590	100.0	1,928	100.0

Total Persons in Households	5,505		7,973	

Source: 1990 and 2000 U.S. Census

Household Size

Trends in household size can indicate the growth pattern of a community. Average household size will increase if there is an influx of larger families or a rise in the local birth rate such as may be attributed to more children in a single family or teenage parents living at home. Household size will decline where the population is aging, or when there is an immigration of single residents outside childbearing age.

As shown in Table 1.3-6, Average Household Size in Avenal was 3.46 Persons Per Household in 1990 and increased to 4.14 Persons Per Household in 2000.

Table 1.3-7 identifies total housing units for Avenal and Kings County in 1980, 1990 and 2000. The growth rate of housing units in Avenal was slightly less than that of the County in the last decade. Between the years 1990 and 2000, a total of 285 housing units (U.S. Census data) were added within the City (an increase of 16.0 percent) while Kings County's percentage of housing units increased 18.5 percent to total 36,563 in 2000.

Table 1.3-7
Total Housing Units, 1980-2000
Avenal and Kings County

	1980	1990	1980-1990	2000	1990-2000
			Increase (%)		Increase (%)
Avenal	1,410	1,776	26.0	2,061	16.0
Kings County	25,694	30,843	20.0	36,563	18.5

Source: 1990 and 2000 U.S. Census

Occupied Housing Units

Table 1.3-8 shows Total Occupied Housing Units and Owner-Occupied and Renter-Occupied Housing Units for 1990 and 2000. The 2000 U.S. Census reported that the total number of occupied housing units in the City was 1,928 including 984 (51.0 percent) Owner-Occupied Housing Units and 944 (49.0 percent) Renter-Occupied Housing Units.

Table 1.3-8
Occupied Housing Units, 1990-2000
Avenal and Kings County

	Total Occupied Housing Units	Owner Occupied Housing Units	Owner Occupied Housing Units (%)	Renter Occupied Housing Units	Renter Occupied Housing Units (%)
2000					
Avenal	1,928	984	51.0	944	49.0
Kings County	34,418	19,253	55.9	15,165	44.1
1990					
Avenal	1,590	784	49.3	806	50.7
Kings County	29,082	15,381	52.9	13,701	47.1

Source: 1990 and 2000 U.S. Census

The percentage of Owner-Occupied Housing Units increased 0.7 percentage points from 1990 to 2000, while the percentage of Renter-Occupied Housing Units decreased 0.7 percentage points from 1990 to 2000. As Table 1.3-8 shows, the County's percentage of Owner-Occupied housing units is higher than Avenal's.

Housing Units by Type

Referencing Table 1.3-9, the majority of units built between 1990 and 2000 were single family. However, there were also a significant number of duplexes built during the same time period. The percentage of Single Family Housing Units (both attached and detached) increased from 67.4 percent in 1990 to 70.0 percent in 2000. The percentage of duplexes increased from 5.3 percent in 1990 to 8.2 percent in 2000, and the percentage of Multiple Family Housing Units and Mobile Homes decreased 1.2 percentage points and 3.4 percentage points respectively from 1990 to 2000.

Vacancy Rates

The vacancy rate in a community indicates the percentage of units that are vacant and for rent/sale at any one time. It is desirable to have a vacancy rate that offers a balance between a buyer and a seller. The state uses five percent as a rule-of-thumb for a desirable total vacancy rate. A total vacancy rate of less than four percent could represent a shortage of housing units, which is not the case in Avenal (reference Table 1.3-10). Avenal's total vacancy rate in 2000 was 6.5 percent compared to 10.5 percent in 1990. The vacancy rate in 2004 according to the DOF is 6.44 percent.

Age of Housing Stock

As illustrated in Table 1.3-11, in 2000, 44.0 percent of Avenal's housing stock was built prior to 1970. By 2010, nearly 58 percent (1,191 units) of the City's current housing stock will be over 30 years old. This could indicate the potential need for rehabilitation and continued maintenance of these units by the year 2010. The decade with the most new construction was the 1980's with 464 (22 percent of the total) units added to the City's housing stock. Only 150 (7.2 percent) homes in Avenal were built prior to 1939.

**Table 1.3-11
Age of Housing Stock
City of Avenal**

Year Structure Built	Number of Units	Percent of Total
1990 to March 2000	414	20.0
1980 to 1989	464	22.4
1970 to 1979	280	13.5
1960 to 1969	246	11.9
1940 to 1959	515	24.9
1939 or Earlier	150	7.2

1.4 Economic Conditions and Fiscal Considerations

This section analyzes the characteristics of the existing social and economic conditions and trends that affect the demand for residential, commercial, and industrial land use in Avenal. An overview assessment of Avenal's current demographic and economic condition allows projections to be adjusted based on various factors. These projections are used to forecast

demand for dwelling units and acreage for residential, commercial and industrial uses for the 20-year period from 2005 to 2025, showing incremental development at five-year intervals and projecting the quantitative and qualitative implications of each land usage. This discussion is intended to be used as a guide in the development of planning options and general plan policies.

1.4.1 DEMOGRAPHIC AND REAL ESTATE TRENDS AND OUTLOOK

Population and Household Growth

According to the U.S. Census Bureau's 2000 population estimates, Avenal had a population of 7,973 residents (does not include institutionalized population) and 1,928 households. This represents a 45 percent growth from 1990, when the census population showed 5,505 residents and 1,590 households in Avenal. The annual growth rate between 1990 and 2000 was approximately 4.5 percent. Much of this growth occurred in the early 90's prior to the onset of the recession, and the opening of Avenal State Prison in 1987 brought a significant number of people into the community.

Kings County as a whole is projected to decelerate its growth from what it has been during the 1990's. The County grew at an annual rate of 3.0 percent between 1990 and 2000; the State Department of Finance (DOF) projects the County to grow at an annual rate of 2.3 percent per year to the year 2020. The projections for surrounding counties are higher. By comparison, between 2000 and 2020, Tulare County is projected to grow at a 2.5 percent rate annually, Kern County at 2.9 percent annually, and Fresno County at 1.9 percent annually.

Avenal's population level of 8,288 in 2003 is projected to increase to 12,933 by the year 2025, as seen in Table 1.1-3. The population projections are converted to numbers of households by using an average household size for each year in the projection. The average household size in Avenal is higher than the County average. In 2000, Avenal's average household size was estimated at 4.14 persons per household, up from 3.46 persons per household in 1990. The County's average household size increased from 3.08 persons per household in 1990 to 3.18 persons per household in 2000. According to the *Forecasts For the Central Valley to 2010 and Beyond* by the Central California Futures Institute, the Central Valley will continue to outpace the state and the nation in size of households. By 2010, it is forecasted that household size in the region will be 3.15 persons versus 2.96 for California as a whole.

Residential Real Estate Growth

According to the 2000 Census, approximately 68 percent of the housing units in Avenal are single-family detached units. Duplexes comprised approximately 8 percent of the housing stock while the 20+ dwelling unit structures represented 5 percent of the housing stock. This latter category has decreased its percentage slightly since 1990, while the single-family category has increased (reference Table 1.3-9). The percentage of mobile homes has decreased from 1990 to 2000 by 4.4 percentage points.

Based on the household projections plus a five percent vacancy rate, the total number of dwelling units is projected to increase from 2,061 units in 2000 to 3,280 units by 2025, (reference Table 1.4-1).

**Table 1.4-1
Residential Land Use Demand Projections**

	2005	2010	2015	2020	2025
Dwelling Units	214	225	219	257	281
Low-Density	150	158	153	180	197
Medium-Density	32	34	33	39	42
High-Density	32	33	33	38	42

Source: Quad Knopf, Inc.

The distribution of units by density is projected to remain nearly the same as the current distribution. This assumption is strongly affected by the General Plan and zoning policies adopted by the City.

The total acreage demand for housing units is estimated on the basis of the current average density in each residential category. Comparing the unit counts with the total acreage for each residential land use category, the average densities are approximately 5.8 units per acre in the Low-Density category, 10.0 units per acre in the Medium-Density category and 12.3 units per acre in the High-Density residential land use category. Again, these figures could change as a result of the General Plan Update, but they provide the basis for the preliminary estimates of land demand for residential uses.

Economic Trends

In the year 2003, Kings County had a total employment of 39,700, an increase of 8,200 since 1993. This represents a 26.0 percent increase for the period or an annual growth rate of approximately 2.4 percent. This is in contrast to the state, which had a 19.2 percent increase from 1993 to 2003, and an annual growth rate of 1.7 percent (reference Table 1.4-2). The County's performance is indicative of its potential comparative economic advantages versus other regions of the state. The substantially lower labor and land costs in the County could explain to a large extent this performance.

The largest employment industry in 2003 in Kings County was the Government industry at 33.8 percent. The percent change for this industry from 1993 to 2003 was 61.4 percent. This is due in part to the number of prisons that opened in the late 1980's and 1990's in the County and Lemoore Naval Air Station. The second largest industry in Kings County in 2003 was the Total Farm industry. This industry accounted for 18.4 percent of all workers in 2003 and decreased 6.4 percent from 1993 to 2003. The Professional and Business industry increased 85.7 percent from 1993 to 2003 and accounts for 3.3 percent of all employed persons in the County.

1.4.2 EMPLOYMENT AND COMMUTING PATTERNS

The countywide economic picture could bring perspective and new opportunities to Avenal. In order to determine what type of industry could be a benefit to Avenal residents, the intent of this section is to give a more precise picture of the employment and commuting patterns of the residents.

According to the 2000 Census, 24.2 percent of Avenal's work force had less than a ninth grade education, compared to 15.7 percent for the County. Table 1.4-3 (which includes the institutionalized population) shows that 30.2 percent of Avenal's 25-year and older population had at least a high school diploma, but only 6.4 percent had an Associate's degree and 3.0 percent had a Bachelor's degree. Avenal's percentage of the population with high school and

college degrees is lower than the County's. This is due to the inclusion of the institutionalized population, which tends to have lower educational attainment levels.

The level of education is reflected in the types of positions attained by the majority of Avenal residents. Table 1.4-4 shows that 24.0 percent of Avenal's labor force in 2000 worked in a management, professional, and related occupations role, which was 1.1 percentage point higher than the County. The percentage of sales and office occupations in Avenal in 2000 was 32.0 percent and 20.7 percent for the County.

Referencing Table 1.4-6, 52.2 percent of workers 16 years and over in Avenal drove alone to work, compared to 73.5 percent for the County. Workers in carpools in Avenal were approximately 42.2 percent compared to 17.0 percent for the County. Public Transportation use only accounted for 2.1 percent in Avenal and the average travel time to work in Avenal was 33.8 minutes.

1.4.3 AVENAL CITY BUDGET

The City budget consists of a number of funds. The largest fund in terms of its annual revenue is the General Fund (\$2.2 million in fiscal year 2003-2004) (reference Table 1.4-7).

These revenues mostly consist of property tax, sales tax, motor vehicle tax, and franchise fees. The General Fund accounts for the majority of discretionary spending by the City Council. The General Fund is a significant area in the budget where the City has some discretion in terms of allocating expenditures to various services. On the other hand, the General Fund is also the most sensitive to the character of development in the community, which affects the strength of the tax base upon which the General Fund depends for its revenue.

The water fund is the next largest in terms of total revenue (\$2,215,000 in fiscal year 2002-2003). The water fund is used for the acquisition, construction, administration, maintenance and operation of water facilities, and repayment of federal or state loans or advances, made to the City for the construction or reconstruction of water facilities.

The City's estimated revenue for fiscal year 2003-04 is \$15.6 million and the proposed expenditures for fiscal year 2003-04 are \$15.1 million. This would leave the City with a surplus of \$560,000 for fiscal year 2003-04. Overall, the City is in a sound financial system, with adequate fund balances throughout the budget.

Table 1.4-7
2003-2004 Fiscal Year Budget
General Fund Summary

Description	Proposed Budget FY 03/04
City Council	\$29,025.00
City Manager	\$9,399.53

1.5 Transportation and Circulation

1.5.1 PURPOSE

The purpose of the Circulation Element of the General Plan is to provide guidance, by means of goals, policies, and programs for the achievement of an efficient and effective transportation and infrastructure system within and surrounding the City of Avenal. It is also to provide a transportation plan related with the Land Use Element. The intent of the document is to create a plan that will meet the transportation demands of the future population by improving the circulation system in the Plan Area.

1.5.2 EXISTING ROADWAY SYSTEM

Vehicular circulation in Avenal consists of a network of city streets and roads. Streets and roads are classified by functional classification including freeways, arterials, collectors, and local

roads. A freeway is defined as a divided highway with full control of access and two or more lanes for the exclusive use of traffic in each direction. Freeways provide for uninterrupted flow of traffic. There are no signalized or stop-controlled at-grade intersections and direct access to and from adjacent property is not permitted. Access to and from a freeway is limited to ramp locations.

Arterials in Avenal serve as the principal network for traffic flow. They typically have no less than a 100-foot right-of-way and connect areas of major traffic generation within the urban areas and also with important county roads and state highways. Arterials also provide for the distribution and collection of through traffic to and from collector and local streets serving residential, commercial, and industrial land uses.

Collector streets provide for traffic movement between arterial and local streets; traffic movement within and between neighborhoods and major activity centers; and limited direct access to abutting properties. Collector streets in Avenal typically have a right-of-way that ranges between 60 and 84 feet. They are intended to connect arterials with local streets and activity centers.

Local streets provide for direct access to abutting properties and for localized traffic movements within residential, commercial, and industrial areas. In general, local collectors are local streets designated to connect neighborhoods that are designed to discourage through traffic.

Roadways that provide primary circulation within the City of Avenal include: Interstate 5, State Route 33, State Route 269 (Skyline Drive), Seventh Avenue, Third Avenue, Kings Street, Fifth Avenue, Seventh Avenue, and San Joaquin Street.

Interstate 5 is a major north-south corridor that has statewide significance in that it links northern, central, and southern California. Although a portion of Interstate 5 is located in the city's proposed sphere of influence, it is approximately 5 miles northeast of downtown Avenal. According to the Caltrans website, Interstate 5 carries approximately 31,500 vehicles per day at this location.

State Route 33 is a north-south oriented street that operates as a two lane highway. Based upon the current Avenal Circulation Element, State Route 33 is currently designated as an arterial street. State Route 33 serves as an alternate corridor for interregional north-south travel on the west side of the San Joaquin Valley. The current pavement width of State Route 33 is 29 feet with limited shoulders. Based upon Caltrans' Route Concept Report, this highway has a typical minimum right-of-way of 100 feet.

This highway generally comprises the western border of the City of Avenal. State Route 33 acts as an important arterial for the City of Avenal and as a feeder highway to other major State Routes throughout the area. Access to the Avenal Prison is via State Route 33 south of the City and access to the Avenal Airport is provided west of State Route 33. With a posted speed limit of 55 mph, State Route 33 operates as a thoroughfare with no access restrictions, i.e., stop signs or traffic signals, through the study area.

State Route 269 is an east-west oriented street that generally operates as a two lane highway. However, through the City of Avenal, this roadway operates as, and is considered to be, an arterial street. The current curb to curb width of State Route 269 ranges between 52 and 60 feet with curb, gutter, and sidewalk facilities. Based upon Caltrans' *Route Concept Report*, this highway has a typical minimum right-of-way of 100 feet.

Although this is an odd numbered State highway, which would indicate that it has a north-south alignment, through the study area it travels in an east-west fashion. State Route 269 does have two westbound lanes from Avenal Cutoff as it travels up the hill toward Avenal. This extra lane is also known as a "climbing" lane. West of Hydril Road it becomes a two lane roadway with a two-way-turn-lane that divides the travel lanes. State Route 269, known to the local residents as Skyline Boulevard, acts as Avenal's main corridor that provides access to a variety of local services and to minor collector facilities that intersect this roadway.

Third Avenue is a north-south collector street that extends from State Route 33 to just north of Alpine Street. From curb to curb, Third Avenue ranges between 40 and 50 feet wide. Third Avenue contains two travel lanes with a two-way turn lane in portions of the median, on-street parking, accommodates bicycle travel, and has a posted speed limit of 30 mph. Third Avenue primarily serves residential development with mixed commercial development near Skyline Boulevard. Truck travel is discouraged on Third Avenue and as a result, signs of this nature are currently posted.

Fifth Avenue is also a north-south collector street that extends from State Route 33 to just north of Alpine Street. From curb to curb, Fifth Avenue is 40 feet wide. Fifth Avenue includes two travel lanes, on-street parking, accommodates bicycle travel, and has a posted speed limit that ranges from 25 to 30 mph. Fifth Avenue primarily serves residential land uses and truck travel is discouraged on this facility.

Seventh Avenue is a north-south collector street that extends from State Route 33 to Mariposa Street. From curb to curb, Seventh Avenue is typically 52 feet wide. Seventh Avenue contains two travel lanes, on-street parking, accommodates bicycle travel, and has a posted speed limit of 30 mph. Because Seventh Avenue can be used to travel between State Routes 33 and 269, a large amount of traffic utilizes Seventh Avenue and it acts as a "short cut". Many Avenal Prison workers traveling to or from areas east of Avenal contribute to these cut-through trips.

Kings Street is an east-west collector that extends from State Route 33 to Seventh Avenue. The curb to curb width of Kings Street is 60 feet and it includes two travel lanes, angled on-street parking, and has a posted speed limit of 25 mph. West of Skyline Boulevard, Kings Street serves the downtown area and includes amenities such as street lighting, trees, other landscaping features, and bicycle parking stalls.

San Joaquin Street is a two-lane east-west roadway that intersects with State Route 269 just south of Hydril Road. The San Joaquin Street/State Route 269 intersection is a

skewed "T" intersection. This street primarily serves local residences, with the exception of commercial land uses near the intersection at State Route 269.

1.5.3 EXISTING TRAFFIC VOLUMES

The following intersections were identified as critical intersections for the General Plan Update:

- State Route 33/San Joaquin Street
- State Route 33/State Route 269
- State Route 33/Seventh Avenue
- State Route 269/Third Avenue
- State Route 269/San Joaquin Street
- State Route 269/Kings Street
- State Route 269/Fifth Avenue
- State Route 269/Seventh Street

At these intersections, existing weekday AM and PM peak-hour traffic volume counts were conducted by OMNI-MEANS on Tuesday, March 30, 2004.

In addition, the following average daily traffic (ADT) counts were conducted on March 30, 2004 for the following street segments:

- State Route 33 between Seventh Avenue and San Joaquin Street
- State Route 269 between State Route 33 and Hydril Road
- San Joaquin Street between State Route 33 and State Route 269
- Kings Street between State Route 33 and State Route 269
- Third Avenue between State Route 269 and San Joaquin Street
- Fifth Avenue between State Route 269 and San Joaquin Street
- Seventh Avenue between State Route 33 and State Route 269

It should be noted that ADT information related to State Routes was taken from Caltrans' website.

1.5.4 LEVEL OF SERVICE METHODOLOGY

Traffic operations have been quantified through the determination of "Level of Service" (LOS). Level of Service is a qualitative measure of traffic operating conditions, whereby a letter grade "A" through "F" is assigned to an intersection or roadway segment representing progressively worsening traffic conditions. Levels of Service were calculated for different intersection control types using the methods documented in the *2000 Highway Capacity Manual*. Levels of Service definitions for different types of intersection controls are outlined in Table 1.5-1.

The City of Avenal Circulation Element has designated LOS "C" as the minimum acceptable LOS standard on City facilities in general. In this report, a peak-hour LOS of "C" is taken as the threshold for acceptable traffic operations at all study intersections and roadways. All intersection turning movement volumes and LOS worksheets are contained in Appendix C.

To determine whether “significance” should be associated with unsignalized intersection level of service, a supplemental traffic signal warrant analysis was also performed. The signal warrant criteria employed for this study are presented in the Caltrans *Traffic Manual*. Specifically, this study utilized the Peak-Hour-Volume Warrant-11 (Urban Areas). Though utilization of this warrant may indicate that signalization would be required, the final decision to provide this improvement should be based on further studies utilizing the additional warrants presented in the Caltrans *Traffic Manual*.

This traffic study generally provides a “planning level” evaluation of traffic operating conditions, which is considered sufficient for California Environmental Quality Act/National Environmental Policy Act (CEQA/NEPA) purposes. This planning level evaluation has included, however, a heavy-vehicle adjustment factor and peak hour factors (0.92). Because many of the trips will be heavy duty vehicles, the percentage of heavy duty trucks was applied in the *TRAFFIX 7.6* software.

1.5.5 EXISTING TRAFFIC OPERATIONS

Existing peak-hour intersection traffic operations were quantified applying existing traffic (reference Figure 1.5-1) volumes and existing intersection lane geometrics and control (shown on Figure 1.5-2). Table 1.5-2 presents the existing peak hour intersection levels of service.

As indicated in Table 1.5-2, all of the study intersections are currently operating at LOS “C” conditions or better during the AM and PM peak hour periods. In addition, the two-way stop-controlled intersections do not satisfy the Caltrans Peak Hour Volume Warrant-11 (Urban Areas).

1.5.6 EXISTING ROADWAY OPERATIONS

“Existing” conditions roadway operations were also determined. Table 1.5-3 identifies “Existing” conditions roadway LOS. The average daily traffic (ADT) counts for “Existing” conditions are shown on Figure 1.5-3. Based upon the results presented in Table 1.5-3, all of the study roadway segments are projected to operate at acceptable LOS “C” conditions or better under “Existing” conditions.

**Table 1.5-1
Level of Service Criteria
for Intersections**

LEVEL OF SERVICE	TYPE OF FLOW	DELAY	MANEUVERABILITY	STOPPED DELAY/VEHICLE (SEC)		
				SIGNALIZED	UNSIGNALIZED	ALL-WAY STOP
A	Stable Flow	Very slight delay. Progression is very favorable, with most vehicles arriving during the green phase not stopping at all.	Turning movements are easily made, and nearly all drivers find freedom of operation.	≤ 10.0	≤ 10.0	≤ 10.0
B	Stable Flow	Good progression and/or short cycle lengths. More vehicles stop than for LOS A, causing higher levels of average delay.	Vehicle platoons are formed. Many drivers begin to feel somewhat restricted within groups of vehicles.	>10 and ≤ 20.0	>10 and ≤ 15.0	>10 and ≤ 15.0
C	Stable Flow	Higher delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant, although many still pass through the intersection without stopping.	Back-ups may develop behind turning vehicles. Most drivers feel somewhat restricted	>20 and ≤ 35.0	>15 and ≤ 25.0	>15 and ≤ 25.0
D	Approaching Unstable Flow	The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high volume-to-capacity ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.	Maneuverability is severely limited during short periods due to temporary back-ups.	>35 and ≤ 55.0	>25 and ≤ 35.0	>25 and ≤ 35.0
E	Unstable Flow	Generally considered to be the limit of acceptable delay. Indicative of poor progression, long cycle lengths, and high volume-to-capacity ratios. Individual cycle failures are frequent occurrences.	There are typically long queues of vehicles waiting upstream of the intersection.	>55 and ≤ 80.0	>35 and ≤ 50.0	>35 and ≤ 50.0
F	Forced Flow	Generally considered to be unacceptable to most drivers. Often occurs with over saturation. May also occur at high volume-to-capacity ratios. There are many individual cycle failures. Poor progression and long cycle lengths may also be major contributing factors.	Jammed conditions. Back-ups from other locations restrict or prevent movement. Volumes may vary widely, depending principally on the downstream back-up conditions.	> 80.0	> 50.0	> 50.0

1.5.7 EXISTING TRANSIT SERVICE

Avenal's transit needs are served by the Kings Area Rural Transit (KART), which is overseen by the Kings County Public Works Department. KART serves the transit needs throughout Kings County and also provides service to its residents and to adjacent counties. The fixed route provides transit service between the cities of Avenal and Hanford, which is the county seat. As shown on Figure 1.5-4, this route is triangular in nature and serves San Joaquin Street, State Route 33, and State Route 269 (Skyline Boulevard).

In Avenal, fixed route transit service currently operates Monday through Saturday. KART does not operate on Sundays or holidays. Departures from Avenal to Hanford occur at 7:45 am, 12:45 pm, 2:00 pm, and 5:15 pm; arrivals from Hanford occur at 7:45 am, 12:35 pm, and 5:15 pm. The fixed route service costs \$4.00 for adults and \$2.00 for youths (ages 7-12). Trips within the city are \$1.50. Monthly passes for the Avenal-Hanford route may also be purchased through KART for \$60.00.

 Quad Knopf	EXISTING DAILY TRAFFIC COUNTS	Figure 1.5-3
---	--------------------------------------	-----------------

KART also provides Dial-A-Ride services for residents of Avenal traveling more than ½ mile from an existing bus route or for those riders certified by KART as disabled. Dial-A-Ride (door to door) service is available in Avenal on Monday through Friday between 11:00 am and 1:30 pm. All rides from home must be scheduled one day in advance. However, disability service may be scheduled during normal operating hours.

Current ridership trends, based upon data provided by KART from the previous eight months, indicate that the demand for transit services remains constant. Approximately 860 transit riders utilize KART's Avenal-Hanford route each month. In addition, the Dial-A-Ride service assists approximately 180 patrons each month in the City of Avenal.

1.5.8 EXISTING BICYCLE AND PEDESTRIAN FACILITIES

The Kings County Association of Governments (KCAG) adopted the *Kings County Regional Bike Plan* in July 1998. The adopted bikeway map is depicted on Figure 1.5-5. The current bicycle plan provides for connections between major urban and recreational facilities within Avenal. This plan is expected to be satisfactory for the foreseeable future. In addition to the provision of bikeway routes, KART provides bike racks on transit vehicles in their effort to enhance the use of transit and bicycling within the urban areas. With the onset of air quality attainment strategies and congestion management, bicycling is considered an effective alternative mode of transportation that can help improve air quality and reduce the number of vehicles traveling along congested facilities within cities and communities.

The *Caltrans Highway Design Manual Standards* for bikeway facilities includes the following types of bicycle facilities:

- Class I Bikeway (Bike Path) – Provides a completely separate right of way for the exclusive use of bicycles and pedestrians with cross-flow minimized;
- Class II Bikeway (Bike Lane) – Provides a striped lane for one-way bike travel on a street or highway; and
- Class III Bikeway (Bike Route) – Provides for shared use with pedestrian or motor vehicle traffic (no pavement stripes or bicycle lane designation markers).

In addition to the above classifications, the *Kings County Regional Bicycle Plan* recommends the use of two additional bicycle facilities:

- Class III with Striping – Provides a shoulder stripe but does not include bicycle lane pavement markings. These facilities do include the “Bike Route” signage similar to a Class III facility. This type of bikeway is most appropriate when insufficient pavement width is available to provide a standard Class II facility, but it is desirable to designate a portion of the roadway for bicyclists.

Touring – This facility designation is used for streets that cannot be given a formal designation (i.e., Class I, II, or III) because of cost, liability concerns, etc., but are used as a primary cycling route by more experienced (and typically long-distance) cyclists. These streets are often narrow, without shoulders, or carry high speed traffic. These streets do not provide the level of protection or comfort necessary for the casual, less experienced cyclists. Therefore, a touring roadway is one on which only experienced cyclists should ride.

According to the *Kings County Regional Bicycle Plan* a total of 5.9 miles of new bicycle routes have been constructed since December 1997. The Plan further indicates that with over 10,600 feet of Class II routes and 20,000 feet of Class III routes in Avenal, the community has made a positive move toward promoting safe bicycle use. Bicycle ridership elsewhere may occur on existing streets as “shared-use” facilities.

Pedestrian facilities within the immediate vicinity of schools and recreational facilities are also important components of the non-motorized transportation system. Pedestrian circulation facilities within and around school and recreational areas are provided where appropriate and enhance the safety of those who choose to use these facilities.

1.6 Public Facilities and Services

1.6.1 WATER SUPPLY SYSTEM

The City provides water service to the urbanized portion of Avenal, the State Prison, and a limited number of connections in the northern portion of the community near Interstate 5. The City’s source of water is the San Luis Canal which is part of the State and Federal water project that provides water to the west side of the San Joaquin Valley. The City obtains the canal water through a contract with the U.S. Bureau of Reclamation (USBR).

The USBR contract, which started in 1969 and runs through 2008, allocates a maximum delivery of 3,500 acre-feet per year to the City. However, the actual delivery to the City is subject to the availability of water to the San Luis Project. As a result of dry water years, USBR will reduce the City’s allocation to a percentage of historical use. The amount of reduction will depend on snow pack and state reservoir levels.

Treatment/Pumping Plants

Water Plant #2, which was constructed in 1987 by the state so the City could provide water to the Prison, has a capacity of 3.1 mgd (3,400 acre-feet per year). An agreement between the State Department of Corrections and the City of Avenal allocates 1,411 acre-feet per year to the prison.

Water plant #1, which was constructed in 1971 and rehabilitated in 2000 has a capacity of 2.2 mgd giving the City a combined capacity of 5.3 mgd (5,937 acre-feet per year).

The annual production of the treatment plants has averaged 2.6 mgd for the 2003 year. During this period, the production ranged from a high of 4.47 mgd in August to a low of 1.04 mgd in February. The highest production on record, 4.47 mgd, occurred in August of 2003.

Transmission Lines

Water is delivered from the treatment plants to the developed portion of Avenal (and the prison) in a pair of parallel transmission mains. The two mains consist of a 12-inch diameter line that, prior to the construction of the Prison, had served the community; and an 18-inch line that was installed at the time the State constructed the newer treatment plant. The larger main primarily serves the Prison. The two transmission mains run along the Avenal Cutoff Road and then parallels Highway 269 into urbanized Avenal.

Water currently is conveyed in two water mains, a 12-inch line stemming from treatment plant #1 and an 18-inch line stemming from treatment plant #2, to an on-line 2.9 million gallon storage tank located approximately two and one-half miles south of Interstate 5.

From the storage tank, water is conveyed north (by gravity) in the 12-inch main to a Caltrans I-5 rest stop, the PG&E pump station located east of the Avenal Cutoff Road, and a limited number of domestic connections. The 12-inch main delivers water to the developed portion of Avenal while the 18-inch main delivers water to the Prison. There is an interconnection between the 18-inch and 12-inch mains at the 2.9 mg tank. Both lines feed the prison and City.

The 12-inch main feeds into and discharges from a 750,000 gallon storage tank that is located immediately north of the developed portion of Avenal. A lateral line connects the 18-inch main with this tank.

Distribution System

Avenal's water distribution system consists of a network of mains in most of the streets and alleys in the community. The mains generally are 6-inch diameter asbestos cement pipes. To date, there are approximately 1,827 connections to the City's water system.

The City staff reports that the distribution system is adequate to satisfy current demands and provide the required Uniform Fire Code fire flows. The City operates the system with a pressure that ranges from 60 to 105 pounds per square inch (psi).

The 18-inch main that serves the Prison follows Seventh Avenue to Highway 33 and then southeast to the Prison. The City maintains a two million gallon storage tank adjacent to the Prison. Although the 18-inch main was built primarily to serve the Prison, it is interconnected with the distribution system near Seventh Avenue and Orange Street by a valve that is manually operated. This valve is typically closed.

Demand

Water from the San Luis Canal is treated at the City's Water Treatment Plant, which is located east of Interstate 5 (I-5). The current capacity of the Water Treatment Plant is 5.4 million gallons and the current demand is 3 to 3.5 million gallons per day (Duke Energy Avenal, October 2001). Therefore, the City's water treatment plant has an excess capacity of between 1.9 and 2.4 million gallons per day. The major water users in the City include Floyd Rice Park, the schools, and the hospital.

1.6.2 SANITARY SEWER SYSTEM

Collection System

The City of Avenal provides sewer service to its urbanized areas and the Avenal State Prison. The City's sewage collection system includes two major trunk lines in Laneva Boulevard, 8 and 10 inches in diameter, that extend from the urban area to the sewage treatment plant located in southeast Avenal. Within the urban area, the collection system generally consists of 6-inch diameter lines. An 18-inch line connects the State Prison directly to the treatment plant.

The City's collection system drains by gravity to the treatment plant. The system operates without pump stations and there are no force-main lines.

The major trunk lines that service the City are currently not operating at their capacity according to City staff.

Treatment Plant

The existing Avenal treatment plant was constructed in 1987 along with the State Prison, located west of the treatment plant. Avenal's former treatment plant was located approximately one mile north of the existing plant.

Capacity

The existing plant was designed with a hydraulic capacity of approximately 1.8 million gallons per day (mgd). It currently is permitted for a discharge flow of 1.63 mgd by the California Regional Water Quality Control Board (CRWQCB).

Through an agreement with the City of Avenal, the State Prison is allocated approximately one-half of the treatment plant's design capacity. The Prison's allocation includes flows of nearly 0.8 mgd of domestic wastewater and approximately 0.1 mgd of industrial wastewater. The City has reserved the remaining one-half of the plant's capacity for future development in Avenal.

The average biochemical oxygen demand (BOD) loading capacity of the plant is 2,033 pounds per day and the average total suspended solids (TSS) loading capacity is 2,195 pounds per day.

Facilities

The treatment plant, which currently is operated by the City of Avenal, consists of a headworks grinder, an oxidation ditch, two clarifiers, six sludge-drying beds, and pumps and piping to transfer treated wastewater to the effluent storage reservoir.

Treated effluent from the plant is pumped across Highway 33 to two approximately 300 acre-foot storage ponds hooked up in series. The ponds are located immediately south of the prison. The effluent is applied to agricultural lands on the west side of Highway 33.

Flows

Flows entering the treatment plant have averaged 1.097 mgd between January and December of 2003, ranging from a high of 1.268 in September to a low of 0.952 in April. The prison generated an average flow of 0.811 mgd in 2003, which was approximately 74% of the total flow at the plant. The City generated an average flow of 0.288, which was approximately 26% of the total flow at the plant. Based on a 2003 non-prison population of 8,382 and an average flow at the plant from the City of 0.288 mgd, the citywide sewage generation rate is approximately 34.4 gallons per day per person. The average daily generation rate per residential unit is approximately 117 gallons per day (based on a occupancy rate of 3.4 people per unit). In 2003 the average BOD loading was 2,033 lbs per day, while the average TSS loading was 2,195 lbs per day.

Available Capacity

Based on 2003 flows at the plant, 0.701 mgd of the plant's capacity is currently unused. Approximately 0.35 mgd of this available capacity is allocated to the prison, while the remaining 0.35 mgd of the unused capacity is reserved for the City. Based on the 2003 average sewage generation rate of 34.4 gpd per person, the treatment plant's reserve capacity (for the City) is sufficient to accommodate approximately 11,995 additional people or 3,528 new single-family residential units (at an occupancy rate of 3.4 persons per unit). At the projected annual population growth rate, the City's portion of the treatment plant's reserve capacity will not be utilized until beyond the year 2025 under average flow conditions.

Sludge Disposal

Sludge from the treatment plant is currently stock piled on site and is disposed of on an annual basis. The sludge at the treatment plant consistently meets Title 22 levels for Class B sludge.

1.6.3 STORM DRAINAGE

The existing storm drainage infrastructure in Avenal is limited to a collection line on Skyline Boulevard (Highway 269) that is operated and maintained by the State, and a City collection line on San Joaquin between First Street and Highway 33. Both of these collection lines discharge by gravity to open fields on the west side of Highway 33.

In the early 1990's, the City completed a street improvement program in which curb and gutter was installed on all streets in the developed portion of the community. Runoff from these improved areas drains as surface flow in a southwesterly direction toward Highway 33.

1.6.4 EPA "PHASE II" STORMWATER DRAINAGE DISCUSSION

The EPA established a March 2003 deadline for permit application for the Storm Water National Pollutant Discharge Elimination System (NPDES) Phase II Rule implementation. Municipal Separate Storm Sewer Systems (MS4s) serving a population of less than 100,000 and located in an urbanized area or designated by the permitting authority (the local regional water quality control board) are covered by the Phase II Rule. The City is required to submit its application

for a Phase II permit that must include a Storm Water Management Program/Plan addressing the six minimum control measures as follows:

1. Public education and outreach on storm water impacts.
2. Public involvement/participation
3. Illicit discharge detection and elimination
4. Construction site storm water runoff control
5. Post-construction storm water management in new development and redevelopment
6. Pollution prevention/good housekeeping for municipal operations.

The City is responsible for preparing a storm water management program that specifies Best Management Practices (BMPs) for the six minimum control measures. While the regulations do not necessarily require Phase II permits to address industrial discharges, it should be anticipated that the Regional Board will attempt to place this responsibility upon the City.

1.6.5 SCHOOLS

Educational services are provided by the Reef-Sunset Unified School District and serve grades K-12. Avenal is within commuting distance from several Junior Colleges, Universities, and Institutes. These include:

- West Hills College in Coalinga;
- College of the Sequoias in Visalia;
- Chapman University in Hanford;
- San Joaquin Valley College in Visalia; and
- California State University, Fresno

Reef-Sunset Unified School District –The Reef-Sunset Unified School District encompasses the City limits and surrounding areas. The District includes three elementary schools, one middle school, one high school, two continuation schools, and two community day schools. The School District's office is located at 205 North Park Street in Avenal. Reef-Sunset Unified School District student enrollment in 1992 was 1,798 students and increased to 2,422 students (2,061 without Kettleman Elementary, continuation schools, or community day schools) by 2002-03. This was an increase of 34.7 percent. As of 2001-02, Reef-Sunset Unified had 130 teachers, 12 administrators, and 10 persons in pupil services for a total staff of 152.

The District's three elementary schools serve either grades K-5 or K-8 and include: Avenal Elementary located at 400 South First Avenue, with a student enrollment of 646; Kettleman City Elementary with an enrollment of 308, located at 701 General Petroleum Street in Kettleman City; and Tamarack Elementary located at 1000 Union Avenue, with a student enrollment of 400. The schools operate on single-track, traditional school schedules.

Avenal's only middle school, Reef Sunset Middle, serves grades 6-8 and is located at 608 North First Avenue. Reef Sunset's total enrollment in 1998-99 was 444 and decreased 3.2 percent to

total 430 in 2002-2003. The average class size in 2002-03 was 26.1 students per class and the student to teacher ratio was 19.5.

Avenal's public high school, Avenal High, serves grades 9-12 and is located at 601 Mariposa Street. Avenal High's total enrollment in 1998-99 was 560 and increased to 585 by 2002-03. This was a 4.5 percent increase and an annual growth rate of 0.9 percent. The average class size in 2002-03 was 26.1 students per class and the student to teacher ratio was 20.2.

As Table 1.6-1 shows, none of the schools in Avenal are currently over capacity. The school in Avenal which is closest to being at capacity is Avenal High with a 2002-03 enrollment of 585 students and a capacity of 800. Avenal High's student enrollment increased only 4.5 percent (25 students) from 1998-99 to 2002-03. Total enrollment in Avenal in 2002-03 was 2,061 (not including continuation and community day schools) and design capacity was 4,100.

Table 1.6-1
Reef Sunset Unified School District, 2002-03
School Enrollment and Design Capacity

School	Grades	Capacity	Enrollment
Avenal Elementary School	K-8	1,100	646
Kettleman City Elementary	K-8	1,100	308
Tamarack Elementary	K-5	1,100	400
Reef Sunset Middle	6-8	1,100	430
Avenal High	9-12	800	585
Adelante High (Continuation)	9-11	N/A	5
Reef Sunset Elementary (Community Day)	3-6	N/A	8
Reef Sunset Secondary (Community Day)	7-11	N/A	15
Sunrise High (Continuation)	9-12	N/A	25

Source: Education Data Partnership. Reef Sunset Unified School District.

Table 1.6-2 shows the school district's enrollment from 1992-93 to 2002-03. The District's student enrollment increased 12.3 percent (265 students) from 1992-93 to 2002-03.

Table 1.6-2
School District Enrollment
1992-93 to 2002-03

Academic Year	No. of Students
2002-03	2,422
2001-02	2,403
2000-01	2,426
1999-00	2,418
1998-99	2,452
1997-98	2,452
1996-97	2,358
1995-96	2,273
1994-95	2,285
1993-94	2,198
1992-93	2,157

Source: Education Data Partnership

1.6.6 POLICE AND FIRE

The Kings County Sheriff's Office provides round-the-clock police services for the City of Avenal. The County maintains a substation located at 501 East Kings Street in Avenal. The substation offers 24-hour police service. The substation is staffed with one commander, nine deputies and two sergeants. At a minimum, there is one deputy on call 24-hours per day.

Avenal has a Justice Court and one court holding cell used only when the court is in session. The Court is in session every Friday. All arrested persons are transported to Kings County jail in Hanford, which is approximately 45 minutes away. The Sheriff's Department maintains a close working relationship with the police departments in Coalinga and Huron.

Fire protection is provided by the Kings County Fire Department augmented with a local volunteer force. The County maintains a station house in Avenal with two professional fire fighters (occasionally three) on duty 24-hours per day and nine volunteers. The fire station maintains four engines and two squad trucks. The County also has a two-man station (four volunteers) in Kettleman City, fifteen miles east of Avenal.

In addition, the County Fire Department works closely with California Department of Forestry (CDF) and the Avenal State Prison Fire Department. The County and CDF have a "dual responsibility" area west of State Highway 33. This means that they will both respond to fires in that area. The Avenal State prison maintains its own fire department at the prison site. The County indicated that they have a mutual aid agreement with the prison for fire services. The prison fire department works closely with the Kings County fire department and responds to almost all fires in the area. Although the Departments work closely together, the prison department cannot be relied on for responses to all emergencies. For security reasons, it is unusual for the County to assist with fires at the prison.

The County Fire Department indicated that grass and brush fires decreased 79 percent from 2002 to 2003 (39 grass fires). These typically occur in areas where onsite water is not available. In these cases, the fire crews fight most grass blazes by starting a "back-burn" fire in the path of the blaze. The two fires are expected to burn themselves out when they meet. Within the urbanized area, onsite water is available for fire use. The County stated that water pressure and quantity within Avenal have been sufficient to meet the demand during fires.

The Kings County Fire Department indicated that all of the urbanized area of Avenal falls within a 3-minute response time. However, a portion of the City limits in the unurbanized area is outside the 5-minute response time. The area near Interstate 5 is an "uphill pull" from the existing station. This area is about 8 to 12 minutes from the station.

The breakdown of calls for service in 2003 is as follows:

- Structures 35 (5%)
- Vehicle 31 (4%)
- Medical Aid (not traffic) 391 (57%)
- Traffic Accidents 115 (17%)

- Grass Fires 39 (5.8%)
- Other 64 (11.2%)

Since the construction of the prison in 1987, the Fire Department has noticed a significant increase in the number of emergency calls, especially for medical aid and traffic accidents. Although the actual City population has not increased as much as anticipated, the number of vehicles traveling to and from Avenal did. This would include prison employees traveling to and from work and prison visitors. This has increased the number of motor vehicle accidents and medical aid calls to which the Fire Department responds. For instance, in 1991 the Department responded to 361 emergency calls. In 2003, total responses were up to 675. The majority of medical aid and traffic accident calls for service were on Interstate 5 and accounted for 74 percent of all calls.

1.6.7 OTHER PUBLIC FACILITIES AND SERVICES

Electricity

The Pacific Gas and Electric Company (PG&E) is the provider of electricity for the City of Avenal. Existing trunk and transmission facilities are adequate to meet present and projected demand in the community.

Natural Gas

Avenal is supplied with natural gas by PG&E. Existing service is good, and company officials indicate no current unforeseeable peak load or pressure deficiencies.

Telephone

Service in and around Avenal is provided by Pacific Bell.

Cellular Service

Cellular telephone service is provided for the City of Avenal by a number of companies including U.S. Cingular, Nextel, Virgin Mobile USA, etc. Calls are placed from cellular phones, which are simply wireless mobile or portable phones that have radio-frequency (RF) transmitters and receivers. The RF signals are received by "cell" sites (hence the name "cellular"), which are RF receiver/transmitter stations situated on towers that are strategically placed to be able to transmit over or around topographic barriers. Signals from cellular phones are transmitted from cell to cell until they reach a mobile telephone switching office (MTSO) in the local calling area that the caller wishes to reach. Here, the call is linked by MTSO from the cellular network to the local telephone office.

From a planning viewpoint, the City must take care in approving cell sites. Planning considerations include flight patterns, visual/aesthetic effects, and possible effects on wildlife. As opposed to other utilities, however, there are no pipelines or cables other than electrical service to the site, which can represent a greater spectrum of potential effects. Also, a specific band of radio frequencies is assigned to each provider. They can be reused to serve a large number of

people, since the signals are not confined to cables to which individual users must be linked. Unless a sufficient grid of towers is approved within a county, cellular phone coverage will be spotty or non-existent.

1.6.8 AVENAL PUBLIC LIBRARY

Library service is provided by the Kings County Library. The Avenal Branch Library is located at 501 East Kings Street. The library is open Monday through Friday and is closed on Saturday and Sunday.

1.6.9 PUBLIC TRANSPORTATION

The City of Avenal has Dial-A-Ride service through Kings Area Rural Transit (KART). KART serves the cities of Armona, Avenal, Corcoran, Grangeville, Hanford, Hardwick, Kettleman City, Laton, Lemoore, Lemoore NAS, Stratford, and Visalia (with connections to buses serving Coalinga). KART's Dial-A-Ride service for Avenal operates 11:00 a.m. to 1:30 p.m. weekdays and 2:30 p.m. to 3:55 p.m. on Saturdays.

1.6.10 OTHER PUBLIC FACILITIES

The Avenal Post Office (93204) is located at 913 East San Joaquin Street.

1.6.11 SOLID WASTE AND HAZARDOUS WASTE COLLECTION, DISPOSAL, AND MANAGEMENT

The City of Avenal has its own landfill site. The 173-acre, WDR Class III site, is in the eastern portion of Avenal at Hydril Road and Skyline Boulevard. As of September 2, 2002, the landfill is being operated by Madera Disposal Systems Inc., a subsidiary of Waste Connections. The landfill property is still owned by the City of Avenal. Waste includes residential refuse, commercial solid wastes, tires, and construction/demolition wastes. The City contracts with Mid Valley Disposal for solid waste collection.

Avenal has initiated several important waste reduction and recycling programs, including passing an ordinance requiring the mandatory use of the City's recycling program for all businesses and residential units, and starting landfill recycling and salvage operations. Avenal is also successfully documenting its progress in meeting diversion goals and improving or expanding new diversion programs. The City diverted 60 percent of its waste in 2000.

The Avenal landfill is inspected on a monthly basis. The permitted capacity is 6.6 million cubic yards and the remaining capacity is 8.2 million cubic yards. The permitted throughput is 475 tons/day and the estimated closure date of the landfill is 2028. The City is currently sending close to 475 tons/day to the landfill, however, there are plans currently underway to expand the landfill to include up to 6,000 tons/day.

1.7 Recreation, Archeological and Historical Resources

1.7.1 EXISTING PARK AND RECREATION FACILITIES AND PROGRAMS

The City of Avenal currently has two designated park sites totaling approximately 8.96 acres. Floyd Rice Park is a 4.79 acre site located at the intersection of Park Avenue and Monterey Street. Floyd Rice Park is considered a neighborhood park. According to the National Parks and Recreation Service, a four acre park would be categorized as a neighborhood park, which has a service area of approximately one-quarter to one-half mile radius. Facilities at Floyd Rice Park

include: passive recreation area, playground equipment, barbecues, 20 picnic tables, restrooms, and a community building with kitchen facilities.

Avenal's second park is the proposed Oasis Park (4.17 acres), which is currently unimproved, except for the skate park in the northeast corner. This site was purchased with 1987 Skate Park funds. Although the Park is not currently improved, a recreation grant for \$470,000 has been received to develop this park. Besides these two park sites, other entities which provide open space and park amenities include schools, the horse corrals, the gun club, surrounding agricultural lands, and the open hillsides which border the City.

In addition to maintaining and operating park facilities, the City's Parks and Recreation Department supervises and coordinates a wide variety of programs and activities. Examples include:

Community Events. The Department helps sponsor family-oriented and special community events throughout the year, including the Old Timers Day held in May and the Fourth of July activities.

Sports Programs. The City provides organized men's and women's sports leagues and youth sports leagues, as well as an aquatics program. A strong emphasis has been placed on community participation in the planning, organization, and implementation of these programs. As these programs grow and participation increases, additional fields and facilities will be needed. Existing facilities will need renovations and there will be an increasing demand for additional staffing.

Two other programs that have been quite successful in Avenal are the senior citizen group and little league baseball. Both groups are operated independently of the City Recreation Department and run by private citizens. Below is a brief description of each program:

Senior Programs. Recreational, educational, and nutritional programs are provided for the senior population. The seniors meet at the Veteran's Hall located on Kings Street. The Hall is open from 9:00 a.m. to 1:00 p.m. daily. Pool tables, shuffle board and sewing classes are some of the activities available. In addition, the seniors make occasional trips and outings.

Little League. Avenal Little League is run by private citizens of Avenal. This group enjoys a large annual participation. They are currently using the fields north of Floyd Rice Park. The ball fields are owned by the Reef Sunset Unified School District.

Joint Use of School Facilities

In addition to City-owned park and recreation facilities, Avenal residents have access to grounds and playing fields at Reef Sunset Unified School District (RSUSD) schools. Table 1.7-1 summarizes the sports facilities on school grounds. RSUSD and the City have established an outstanding cooperative relationship encouraging maximum use of public property, facilities, and equipment for the community. Currently the two agencies have a verbal agreement for use of facilities; however, as the City and schools experience continued growth, a more formal joint use agreement would be appropriate.

**Table 1.7-1
Existing School Recreation Facilities**

School	Acres	Recreation Facilities
Avenal Elementary School	10.5	football field, 1 baseball field, volleyball and basketball courts, 1 dirt track, assorted playground equipment
Reef Sunset Middle School	18	volleyball and basketball courts, assorted playground equipment
Avenal High School	38	50 meter swimming pool, football stadium, 1 baseball field, 1 softball field, gymnasium, 3 tennis courts, 1 dirt track, 2 auditoriums
Tamarack Elementary	10	4 basketball courts, tether ball courts, playground equipment, and 1 future soccer field

Source: Reef Sunset Unified School District, 2004

Other Area Open Space and Recreation Facilities

Avenal Gun Club: The Avenal Gun Club is located on the south end of Corcoran Street. The gun club has lessons for children and adults, skeet, archery, a pistol range, and is lighted. This is also the meeting place of the Avenal Hunting Club.

Veterans Memorial Building: The Veterans Memorial building is located on Kings Street between First Avenue and State Highway 33. This building is not only used by the Veterans, but is also used on a daily basis by the Senior Citizens group.

Horse Corrals: The horse corrals are located north of Avenal Hospital in the foothills. The property is leased from Standard Oil. The corrals and stables have been in operation for approximately 60 years. The foothill area also provides an excellent trail system.

Fishing on the Aqueduct: The California Aqueduct provides water for the City of Avenal. The aqueduct runs along the northern boundary of the city limits. Fishing along the banks of the aqueduct is another recreational opportunity for the community that many enjoy.

Avenal Sand Drags: The Avenal Sand Drags are located on the south side of town just north of the prison. A new track has been built and the site is host to events that draw large numbers of people from across the nation.

Regional Parks Facilities

There are several regional parks that are within driving distance to Avenal. Generally speaking, at a maximum, most people would be willing to travel 30 minutes to get to a regional park facility, and possibly one hour if there was some type of event scheduled there such as a church gathering, family reunion, or school function. According to the Kings County Parks Department there are several parks that are currently visited by persons from Avenal. The park most used by citizens of Avenal is Hickey Park located at Flint and Seventeenth Avenues near Hanford. Hickey park is a 47-acre park site mainly used for picnicking. Other activities include: volleyball, baseball, horseshoes, and playground equipment. The park is located approximately 30 minutes from Avenal. Another regional park facility accessible from Avenal is Burrus Park. This facility is approximately one hour from Avenal and contains 57 acres. Burrus Park not only has all of the typical park facilities, but also contains a historical museum. Kingston Park would be the only other Kings County regional park facility that would be less than one hour drive from Avenal. It is a 26-acre park located adjacent to the Kings River near Laton.

The Polvadero Golf Course is located between Avenal and Coalinga on Sutter Avenue. The golf course is privately owned, but is operated by the City of Coalinga, the City of Avenal and the Coalinga-Huron Parks and Recreation District. The golf course is an 80-acre site. It accommodates a full size 9-hole course, a small pro shop, driving range and training facilities. Maintenance of the course is done by several volunteers and a work crew from the Avenal State Prison.

Fresno County Parks Department also has regional parks facilities in the area. Los Gatos Creek Park is located only 25 minutes from Avenal and is mainly used for picnicking. In addition, the City of Coalinga's parks facilities are located within 15 minutes drive from Avenal and are used quite often by persons from Avenal.

1.7.2 HISTORICAL AND CULTURAL RESOURCES

1.7.3 ARCHAEOLOGICAL RESOURCES

The purpose of this study is to identify known and potential cultural resources in the Avenal area and to evaluate what constraints known archaeological resources might have on the development of a general plan. Research was conducted to identify previously recorded resources in the Study Area and to collect a general background of the prehistory and history in the Avenal vicinity. The background information collected in this section will provide a basis for evaluation of the cultural and historical significance of individual resources of the area.

Research sources employed in this study include:

- California Office of Historic Preservation
- Central California Information Center of the California Historical Resources Information System
- National Register of Historic Places, including listed and eligible properties
- California Inventory of Historic Resources
- California Historical Landmarks
- California Points of Historic Interest
- Other registers (through Information Center)
- Historic maps
- Published texts

Previous Studies

There have been previous cultural resource studies in the Avenal vicinity. None of these have recorded significant cultural resources in the vicinity of the City. It should be noted that there have been no surveys of the built environment in the City, which focused on architectural history or historical relationships with important persons or events. Other than this, the previous studies have involved limited survey areas and, in some cases, an emphasis on archeological rather than historical resources.

There are numerous buildings within the City of Avenal that appear to be more than 50 years old. These structures will necessitate the preparation of a Historic Architectural Survey Report to determine if they are eligible for the National Register of Historic Places.

A cultural records search was conducted by the Center for Archaeological Research at California State University, Bakersfield for the Avenal Planning area on March 25, 2004 (reference Appendix A for the Cultural Resources Records Search letter). The search included the following resources: National Register of Historic Places, the California Register of Historical Resources, California Points of Interest, California Inventory of Historic Resources, and California State Historic Landmarks.

The results of the records search indicated that 14 cultural resource studies have been conducted directly on (and around) portions of the Planning Area. None of these studies reported any cultural resources on or within a half mile of the Planning Area.

A historical resource is defined as a building, structure, object, prehistoric or historic archaeological site, or district possessing physical evidence of human activities over 45 years old. There may be unidentified features in the Avenal vicinity that are 45 years or older and considered as historical resources requiring further study and evaluation by a qualified professional of the appropriate discipline.

Prehistory

The Plan Area lies within the historic territory of the Yokuts people. Members of the Penutian language family that held all of the Central Valley, San Francisco Bay, and the Pacific Coast from Marin County to Point Sur, the Yokuts were a distinct language grouping in California. Yokuts communities had true tribal division with group names, a trait absent among other California Indian people (Kroeber 1925). Each tribe spoke a particular dialect common to its members but similar enough to other Yokuts that they were mutually intelligible (Kroeber 1925). The territorial boundaries of the various Yokuts tribes and their neighbors have been delineated by Cook (1955). The Yokuts held the valley floor from the Tehachapis to Stockton, where they were bordered on the north by the Plains Miwok and on the west by the Saclan (Bay Miwok) and Costanoan, also members of the Penutian family. The Miwok of the foothill linguistic division held the Sierra foothills along the eastern territorial boundary to the Fresno River (Barrett and Gifford 1933). From the Fresno River, south, to the Tehachapis, the Sierra Nevada was the home of members of the Shoshonean linguistic group, with southern territorial limits along the Tehachapis also controlled by Shoshonean people. The various peoples of the Hokan language family held the Coast Ranges on the west from Point Sur southward.

Trade was well developed, with mutually beneficial interchange of needed or desired goods. Obsidian, rare in the valley, was obtained by trade with Paiute and Shoshoni groups on the eastern side of the Sierra Nevada, where numerous sources of this material are located, and perhaps came also from Napa Valley to the north. Shell beads, obtained by the Yokuts from coastal people, and acorns, rare in the Great Basin, were among the many items exported to the east by Yokuts traders (Davis 1961).

Economic subsistence was based on the ubiquitous acorn, with substantial dependency on gathering and processing of wild seeds and other vegetable foods. The rivers, streams, and sloughs that formed a maze within the valley provided abundant food resources, such as fish, shellfish, and turtles. Game, wildfowl, and small mammals were trapped and hunted to provide protein augmentation of the diet. In all, the eastern portions of the valley provided a lush environment of varied food sources, and the estimated large prehistoric population reflected this abundance (Cook 1955; Baumhoff 1963).

Settlements were oriented toward water resources, with major villages situated near waterways that provided not only reliable water supplies but also substantial food sources. Houses varied in size and shape (Latta 1949; Kroeber 1925), with most constructed from the readily available tules found in the extensive marshes of the low-lying valley areas. Housepit depressions, still extant in the protected areas of the San Joaquin valley, range in diameter from three to 18 meters.

The most devastating impacts of the Spanish colonization effort were not the result of military conflicts, but came from Old World diseases newly introduced to the native people. Three major epidemics swept through the missions: a respiratory virus at Mission Santa Clara in 1777, pneumonia and diphtheria that killed children from Mission San Carlos to San Luis Obispo, and the devastating measles epidemic that killed at least 1,600 natives at missions from San Francisco to Santa Barbara (Castillo 1978:103). These epidemics at the missions were followed in 1833 by a severe malaria epidemic that claimed thousands of lives and virtually destroyed many villages and

tribes. Up to three-quarters of the population in the San Joaquin Valley was killed by this contagious disease, which was brought to California by a party of Hudson's Bay Company fur trappers from the Oregon country. In 1834, the Mexican government desecularized the missions and many of the Indian residents returned to their former territories, where they survived by a combination of strategies that included traditional hunting and gathering and livestock raiding (Wallace 1978a:459-460; Wallace 1978b:468-469).

History

Avenal's history dates back to 1850, when American settlers arrived in the area and established settlements east and south of the present town. David Kettleman took squatters rights to the Kettleman Hills and Plains in 1850, and perfected a patent on a parcel of land in 1852. The Sunflower Valley, which lies off Highway 41, was also settled in 1850. The Avenal Ranch, located at the southern end of the Kettleman Plain, was established in 1852. The early settler's engaged in cattle ranching and shepherding, which gradually developed into dry farming. The low productivity of this region kept the population sparse until oil was discovered in the Kettleman Hills.

On October 5, 1928 a gusher blew from the Milham Discovery Well, Elliott No. 1 at a depth of 7,800 feet. The town of Avenal was established shortly thereafter when Standard Oil Company laid out a townsite where drillers could live and supplies could be purchased. Section houses were hauled to Avenal from the oil fields in Taft and a boom town was born. The boom continued through the depression years and came to an end with the coming of World War II.

1.8 Natural and Agricultural Resources

1.8.1 WATER RESOURCES IN THE AREA

Surface Water

Avenal does not have any year-round water courses that traverse the Planning Area, however, numerous intermittent water courses, called arroyos, periodically carry waters through the Avenal area. Avenal is located on the Kettleman Plain, which lies between the Kettleman Hills to the north and east and the Kreyenhagen Hills to the south and west. During intense storms, runoff that emanates from these hills causes flooding along the bottom of the valley floor and adjacent to certain drainage courses. This water ultimately flows in a southeasterly direction to a terminal point in the Tulare Lake Basin, 18 miles to the south. Intermittent creeks, such as Arroyo Curvo and Arroyo Esquinado, are found in several of these drainages, however, they flow only during periods of high rainfall.

Groundwater

The groundwater basin under the Kettleman Plain, which encompass about 29,000 acres, is separate and distinct from the San Joaquin Valley basin. A water study completed by CH2M Hill for the Avenal State Prison in 1984 showed that the aquifer was producing about 23,000 acre feet per year. Recharge from surrounding watersheds only amounted to about 9,000 acre-feet per year – an overdraft of 14,000 acre-feet per year. As a result of this overdraft, depth to groundwater has been dropping by four to five feet per year. (CH₂M Hill, Water Supply Study – California State Prison, Kings County, June 19, 1984).

Average depth to groundwater is 240 feet. Depth to groundwater has been measured at 359 feet at a well site on the high school campus and 365 feet at a monitoring well located at the Avenal Landfill.

1.8.2 GROUNDWATER QUALITY

Potential sources of groundwater that can be utilized for agricultural uses do exist within the planning area. The consolidated rocks of the San Joaquin formation and the poorly sorted sediments of the Tulare formation are of such low permeability that recharge from surface water sources is unlikely. Connate water (water which is trapped at the time of deposition) does occur in small quantities within this strata, but is highly saline.

The poor quality of groundwater on the Kettleman Plain makes it unsuitable for domestic uses. High concentrations of dissolved solids, primarily sulfate and sodium, are present in water from the Avenal area. The presence of sulfate is attributed to recharge through the underlying marine and continental deposits. Chemical analyses of a well located approximately three miles south of the planning area (T. 22, R. 17, Sec. 26E) resulted in 1720 parts per million (ppm) total dissolved solids. The sulfate component of this sample was 992 ppm and the sodium component was 232 ppm.

1.8.3 SUMMARY OF EXISTING DESCRIPTIONS OF SOILS IN PLANNING AREA

The soils in the Avenal area are described by the Soil Survey of Kings County prepared by the Soil Conservation, Service, Department of Agriculture (reference Figure 1.8-1). The general soil map of this Survey shows two major soil groups in Avenal: the Kettleman-Cantua-Merced soils, located in the Kettleman Hills, and the Avenal-Panoche soils, located on the Kettleman Plain. The Kettleman Hills soils are derived from sandstone and shale and are associated with moderate to steep slopes. Soils on the Kettleman Plain are associated with alluvial fans. They are very deep, nearly level and are well drained.

The Kings County Soil Survey identifies five specific soils in the planning area. They are Panoche loam, Kettleman loam, Cantua coarse sandy loam and Wasco sandy loam, located on the Kettleman Plain and San Joaquin Valley floor, and the Kettleman-Cantua complex, located in the Kettleman Hills.

SOILS

Figure
1.8-1

Panoche loam is a very deep soil that is well drained and is located on alluvial fans. This soil is suited for urban development as well as agriculture – it has a Class 1 agricultural rating (Class 1 soils have the fewest limitations for agriculture; Class VIII have the most limitations for agriculture) and a Storie Index rating of 100 (A Storie Index rating of 80-100 has the greatest suitability for intensive agriculture; less than 10 has the least suitability).

Kettleman loam is a moderately deep soil that is well drained and is located on the edges of the Kettleman Hills. Runoff from this soil is rapid and hazard of erosion is high. This soil is best suited for rangeland. It has a Class VI agricultural rating and a Storie Index of 63. Limitations for urban development are steepness of slope, moderate depth to bedrock, and hazard of erosion.

Cantua course sandy loam is a deep soil that is somewhat excessively drained. This soil is best suited for rangeland. It has a Class IV agricultural rating and a Storie Index of 73. This soil is poorly suited for urban development, limitations include steepness of slope, shallow depth to soft bedrock, hazard of erosion, and moderately rapid permeability.

Wasco loam is a very deep soil located on alluvial fans. This soil is well suited for agriculture. It has a Class II agricultural rating and a Storie Index of 81. The main limitation to developing on this soil is its moderately slow permeability, which can cause septic tank absorption fields to fail.

**Table 1.8-1
Development Potential of Soils
Avenal Planning Area**

Soil Type	Res. Dwellings	Comm. Buildings	Streets	Parks	Golf Course	Paths/Trails
Kettleman	severe	severe	severe	severe	severe	severe
Cantua	severe	severe	severe	severe	severe	severe
Panoche loam	moderate	moderate	moderate	moderate	moderate	moderate
Wasco sandy loam	slight	slight	slight	slight	slight	slight
Kettleman loam	moderate	moderate	moderate	moderate	moderate	moderate
Cantua sandy loam	moderate	moderate	moderate	moderate	moderate	moderate

In the mountainous parts of the planning area, erodibility is a critical soil characteristic. Erosion factor “K” is a constant used in soil loss equations to predict sheet and rill erosion by water. K factor values range from 0.02 to 0.69 with the higher values representing greater susceptibility to erosion. Erosion Factor “T” represents the amount of soil (in tons per acre) that can be eroded by wind and water without affecting soil productivity over a sustained period. Wind erodibility groups indicate the susceptibility to wind erosion and the amount of soil lost. The groups are numbered 1-8 with the highest number being the least erodible. The physical characteristics of soils in the planning area are described in Table 1.8-2.

**Table 1.8-2
Physical Properties of Soils
Avenal Planning Area**

Soil Type	Permeability in/hr	Available H ₂ O Capacity in/in	Shrink/Swell Potential	Erosion Factor		Wind Erodibility Group
				K	T	
Kettleman	.06-2.0	.14-.16	low-mod.	0.37	3	6
Cantua	2.0-6.0	.09-.12	Low	0.43	2	5
Panoche loam	.06-2.0	.14-.18	Low-mod.	0.43	5	6
Wasco sandy loam	2.0-6.0	.08-.13	Low	0.32	5	5
Kettleman loam	.06-2.0	.14-.18	Low-mod.	0.37	2	6
Cantua coarse sandy loam	2.0-6.0	.09-.12	Low	0.43	3	5

1.8.4 AGRICULTURAL PRODUCTION PATTERNS AND TRENDS

Agricultural soil capacity is classified according to a number of criteria including prime farmland, farmland of statewide importance and unique farmlands. The U.S. Department of Agriculture Soil Conservation Service defines these farmlands as:

Prime Farmland is land best suited for producing seed, feed, forage, fiber and oilseed crops and also available for these uses (the land could be cropland, pasture land, rangeland, forest land or other land, but not urban built-up land or water). It has the soil quality, growing season and moisture supply needed to produce sustained high yields of crops economically when treated and managed, including water management, according to modern farming methods.

Farmland of Statewide Importance is land other than prime farmland that has a good combination of physical and chemical characteristics for production of food, feed, forage, fiber and oilseed crops available for these uses (the land could be cropland, pasture, rangeland forest land or other land, but not urban built-up land or water areas). It has the soil quality, growing season, and moisture supply needed to economically produce sustained high yields of crops when treated and managed (including water management), according to modern farming methods.

Unique Farmland is land other than prime that is used for the production of specific high-value food and fiber crops. It has the special combination of soil quality, location, growing season and moisture supply needed to produce a sustained high quality and/or high yields of a specific crop when treated and managed according to modern farming methods. Examples of such crops are citrus, olives, cranberries, fruit and vegetables.

Figure 1.8-2 depicts the distribution of important farmland by soil type in the Planning Area. The Panoche Loam and Wasco Loam soils are well suited for farmland and the Kettleman Loam and Cantua Coarse Sandy Loam soils are not.

The dominant land use around the City limits is agricultural. Single-family homes occupy many parcels at rural densities. Farm sheds and other ancillary structures are also present. Water for agricultural uses comes from wells exclusively and is delivered via channels.

Kings County, one of the most diverse and productive farming areas in the world, produces over 100 different crops, lumber, nursery stock, livestock, poultry and dairy products. The total value of these agricultural products was approximately \$800 million in 2002.

The benefits of a strong agricultural community far outweigh just the gross receipts of the producers. A single dollar generated by agricultural production results in three to four dollars in the County's gross domestic product. One out of every ten jobs throughout the state is directly linked to agriculture.

According to Kings County Crop Reports, milk, cotton, and cattle have consistently been the top grossing crops in the County, followed by alfalfa and turkeys (reference Table 1.8-3). In 2001, the total harvested acreage of all crops in Kings County was approximately 655,132 and total farmland was 749,100 acres.

**Table 1.8-3
Kings County's Ten Leading Commodities
2002**

Crop	Rank	2002 \$Value	2001 Rank	2000 Rank
Milk, Total	1	303,507,000	1	1
Cotton, Total	2	205,353,000	2	2
Cattle and Calve	3	66,544,000	3	3
Alfalfa, Hay	4	50,186,000	4	4
Turkeys	5	33,388,000	5	5
Pistachios	6	32,237,000	8	11
Tomatoes, Total	7	29,045,000	7	7
Wheat	8	29,039,000	6	6
Peaches, Total	9	26,848,000	10	8
Corn Silage	10	23,709,000	9	9

Source: 2001 and 2002 Agricultural Report San Joaquin County

In 1989, Kings County had 681,000 acres under agricultural production. In 2001, total agricultural acreage was 655,132. This was a loss of 25,868 acres of cropland for the 12-year period. The California Farmland Conversion Report stated that the most common reasons for irrigated farmland loss in the Central Valley were the cessation or idling of irrigated crop production, conversions to low-density rural housing, urban residential and commercial development, and new golf courses.

Parcelization

Figure 1.8-3 classifies properties by parcel size for the Planning Area of Avenal. Parcel sizes are grouped as follows: 0 to 50 acres; 50 to 100 acres; 100 to 200 acres; 200 to 400 acres, and 500 to 650 acres. The white areas reflect parcels less than 50 acres in size. The approximate acreages for each category are included in Table 1.8-4.

Crop Values

In 2002, gross value of agricultural production in Kings County totaled \$1,023,305,000, up 7.5 percent from 951 million in 2001. This was a huge milestone for Kings County since 2002 was the first time gross production value was over a billion dollars. The leading crop was milk at \$303 million. Other leading commodities in 2002 were cotton, cattle, alfalfa, and turkeys. Table 1.8-1 identifies leading Kings County crop and livestock commodities for 2002 by dollar value. While milk remains the leading crop in revenue for 2001 and 2002, revenues have dropped \$58 million from 2001 to 2002. Cotton was the 2nd ranking crop in 2002 at \$205 million, and in 2001 cotton was also ranked 2nd at \$205 million. Cattle and calves was ranked third in 2002 at \$66 million and alfalfa hay was ranked 4th at \$50 million. The top ten crops in 2001 and 2002 have consistently been in the top ten throughout the 1990s.

Williamson Act

The Williamson Act is a non-mandated State program, administered by counties and cities, for the preservation of agricultural land. Participation in the program is voluntary on the part of both landowners and local governments, and is implemented through the establishment of Agricultural Preserves and the execution of Williamson Act contracts. Individual property owners enter into a contract which restricts or prohibits development of their property to non-agricultural uses during the term of the contract in return for lower property taxes. Initially signed for a minimum ten-year period, the contracts are automatically renewed each year for a successive minimum ten-year period unless a notice of nonrenewal is filed or a contract cancellation is approved by the local government. Reference Figure 1.8-4 for parcels under Williamson Act contraction in the Avenal Area.

State subventions are paid to participating county and city governments, based on enrolled acreage, in partial repayment for foregone property tax revenues. These subventions typically do not fully reimburse the counties and cities for lost revenues. For this reason, some jurisdictions do not participate in the Williamson Act program, and others have stopped taking new applications. The current subvention rate is five dollars per acre for prime farmland and one dollar per acre for nonprime land.

Quad Knopf

WILLIAMSON ACT PARCELS

Figure
1.8-4

State law requires that participating counties and cities adopt rules governing the administration of agricultural preserves and the types of uses allowed on land under contract. The uniform rules governing the types of uses allowed on lands under contract in Kings County are contained in the zoning regulations of the Kings County Zoning Ordinance.

State law establishes procedures for cancellation of Williamson Act contracts and requires that all cancellations be carried out in accordance with those procedures. There is no local discretion. State law limits the termination of a Williamson Act contract through the cancellation process to "special" or "extraordinary" circumstances. In contrast to the nonrenewal process, in which a contract is phased out over a nine-year period, approval of a cancellation request results in the immediate termination of a contract once conditions are met. Only the property owner can apply for cancellation, and only the Board of Supervisors can approve such a request after holding a public hearing and making the finding that the cancellation would either be consistent with the intent of the Williamson Act or would be in the public's interest. If a property owner receives approval of cancellation, payment based on a percentage of the current market value of the land is required prior to termination of the contract. In Kings County in 2001, there were 455,997 acres under Williamson Act contract and in 1991 there were 683,254 acres under Williamson Act Contract.

Although implementation of the Williamson Act program is voluntary, once contracts are executed, withdrawal from the program can only be undertaken in accordance with State law. The local entity may, however, impose more stringent requirements for cancellation than those specified under State law. Notices of nonrenewal can be filed either by the property owners or the local entity after adequate notice has been given, as set forth in State law.

In 1998, the State Legislature amended the Williamson Act to provide for the establishment of "Farmland Security Zones." Since the passage of the Williamson Act, it became apparent that owners of prime farmland and land used for high value crops may not realize the property tax reductions under traditional Williamson Act contracts sufficient to justify restricting their land to agricultural purposes. The Farmland Security Zone legislation authorizes landowners to petition the Board of Supervisors to rescind their existing Williamson Act contract in favor of a new Farmland Security Zone Contract (FSZ contract). Land subject to a FSZ contract is valued for assessment purposes at 65 percent of the value of its Williamson Act value or its Proposition 13 value, whichever is lower. The FSZ legislation provides that the FSZ contracts must be one or more of the following classifications, as designated by the California Department of Conservation Important Farmland Series maps: Prime Farmland, Farmland of Statewide Importance, Unique Farmland, or Farmland of Local Importance. The legislation does not include cancellation provisions ("The Farmland Security Zone: Preserving California's Prime Agricultural Farmland," California Farm Bureau Federation website, <http://www.cfbf.com/land.htm>, November 1999). In 2001, Kings County had 242,615 acres under FSZ Contract. Agricultural land in Kings County under Williamson Act and FSZ Contract totaled 698,612 acres.

Mineral Resources

According to the Kings County General Plan Resource Conservation Element, December 1993, there are currently no mineral extraction activities occurring in Kings County. Previously, the only local mineral mining operations were an open pit gypsum mine and a mercury mine. Both have ceased operation. Open pit mining is regulated by the State Surface Mining and Reclamation Act, which requires a local permit and a reclamation plan. These requirements are implemented through the conditional use permit process of the County Zoning Ordinance.

Oil and gas production in Kings County has diminished over the past 35 years. This trend is likely to continue. The county's mild climate and agricultural economy make solar heating and waste-to-energy projects feasible. Sources of biomass, or raw material suitable for conversion to energy, could include manure from dairy operations and municipal waste at landfill sites.

1.8.5 EMPLOYMENT

According to the State Employment Development Department (EDD), total civilian employment in Kings County was estimated to be 49,200 in 2003. The unemployment rate was 14.6 percent for 2003, compared to the statewide unemployment rate of 6.7 percent. Total farm employment in the agricultural sector has decreased from 7,800 in 1993 to 7,300 in 2003. Employment in the goods producing sector has increased from approximately 3,900 in 1993 to 4,800 in 2003. Total farm employment in 2003 accounted for 14.8 percent of the civilian labor force.

Reference Table 1.4-2 for Avenal's labor force by industry for 1993 to 2003. Historically, agriculture and related industries have dominated the County's economy, creating higher unemployment rates partly due to the greater seasonal variations in employment.

1.8.6 MULTIPLIER EFFECT

According to the Kings County Agricultural Commissioner *2002 Agricultural Crop Report*, agricultural production figures only partially reflect the overall measure of the impact agriculture has on the local economy. Field labor, processing, transporting, marketing and other farm-related services significantly multiply the value agriculture has to Avenal.

Income from agriculture at the community level may be classified as primary or secondary income. Examples of primary income are farm operators' and proprietors' net cash farm income, and wages paid to hired labor. The secondary income contribution arises from primary farm income spent as household income. Also, most gross farm income is used to purchase farm business inputs and equipment. Expenditure of these dollars supports local businesses which pay wages and provide income to local proprietors. The impact of both farm household and farm business spending contributes to the secondary income as measured by the income multiplier.

When measuring the multiplier effect, an income multiplier is used to help determine the total effect of each additional dollar earned by a local household. The multiplier ranges in value from one to some value greater than one. Each multiplier has two components: the initial direct income, or primary effect; and the secondary effect, which is caused by two separate forces.

The first force is the ripple effect that occurs when the farmers buy local inputs to use in their production process. The operating budget of the farms is spent either inside or outside the county. Dollars spent locally will generate an indirect effect, resulting in more personal income available to local households. Dollars spent outside the City are lost dollars, and they generate no additional impact.

The second force is the ripple effect that occurs when farm income is paid out to its employees and owners. These dollars go to people in the form of wages, interest, rents, dividends, and profits. If the recipients live locally and spend their household income locally, the dollars will have an induced effect, resulting in more personal income available to local households. If the dollars go to people who do not live or spend in Avenal, the dollars are lost and generate no additional income.

The national earnings multiplier for agriculture is 2.18, meaning that for every primary dollar spent, \$2.18 is generated in secondary income. In addition, for every farm job created, 1.97 secondary jobs are also created. This is lower than the multiplier effects of manufacturing (including food processing) and many other industries.

“High Tech” Agriculture and its Potential

New agricultural technologies include agricultural software (applications of computer technology to agriculture), specialty fertilizers, moisture sensing equipment for irrigation control, “precision” farming based on use of geographic information systems, remote sensing, robotics, computer technology, and biorational and sustainable farming practices which will support twenty-first century agriculture. “High tech” agriculture has the potential to produce higher yields at lower costs. Remote sensing has the capacity to detect specific problem areas and treat them with precision. Position sensitive crop management conserves water and dispenses chemicals in a judicious manner, as compared to indirect methods. Biorational techniques can manage insects through the use of non-toxic behavioral chemicals. These techniques are related to integrated pest management, which uses biological controls to control pests with minimum harmful side effects. Biorational techniques are those techniques that are compatible with the use of biological control, or have little impact on natural enemies. Through the implementation of sustainable agriculture, natural resource degradation can be reduced or prevented. Environmental health can be maintained through the use of reduced-volume irrigation systems, reduced tillage, and the efficient use of inputs.

The USDA policy goals and recommendations for small farms (Section 3.6, Role of Small Farms) recommends emphasizing sustainable agriculture as a profitable, ecological and socially sound strategy. Large scale production often requires the use of intensive systems that harm the natural environment, whereas sustainable agriculture can produce higher value products using methods consistent with long-term environmental enhancement and higher returns per acre.

Biotechnology

Agricultural biotechnology can be defined as the use of living organisms, including microbes, plants and animals, or materials produced from living organisms, to produce useful products

such as pest and disease resistant crops, improved foods and animal vaccines. It includes enzymes produced in fermentation processes, biorational and natural pest control products, genetically transformed food and animal products, and the use of plants to produce human therapeutics. The following are opportunities for business expansion in agricultural biotechnology:

- Biotechnology research and development companies
- Animal-oriented agricultural biotechnology companies
- Domestic and international seed companies
- Agricultural biotechnology production companies
- Start-up agricultural biotechnology companies
- Seed and chemical companies
- Advanced agricultural technologies

Non-traditional Agricultural Operations

Examples of non-traditional agricultural operations include aquaculture, hydroponics and tree farms. None of these are mentioned in the annual Agricultural Crop Report issued by the Kings County Agricultural Commissioner, presumably because revenues are below the cutoff point. Other examples of “non-traditional” or specialty operations include:

- Grape rootstock and grape plant nurseries
- Hardy perennial wholesale nurseries
- Specialized nurseries applying advanced genetics and agricultural biotechnology to their plant development programs
- Specialized nurseries for California native and drought-resistant plants
- Fruit tree nurseries
- Regional wholesale nurseries
- Sod farms
- Seed support industries
- Agricultural software
- Specialty fertilizers

Economic Development and Sustainability

Sustainable agriculture is a farming system that is economically sound, reduces the use of chemical pesticides, and/or promotes cultural practices that enhance habitat values to wildlife. Promoting sustainable agriculture in the Avenal area will increase the amount and quality of wildlife habitat while also continuing an industrial use of land that provides economic benefit to the City. There are ways in which existing agricultural production practices can be modified to provide greater wildlife habitat value while allowing crop production to continue.

Sustainability can also refer to maintaining a critical acreage mass in production of a particular commodity to support the infrastructure and processing needs for that commodity (e.g., seed companies, agricultural machinery suppliers, etc). The central location of Kings County with respect to other agricultural counties in the region (Tulare, Kern, and Fresno) and the size of Kings County's agricultural economy help assure that this critical acreage mass will remain.

The American Farmland Trust's projected urban and suburban development and the resultant loss of farmland in the San Joaquin Valley and counties to the north and east will increase the demand for raw materials from prime farmland in Kings County and other areas in the Southern San Joaquin Valley. Thus, the remaining farmland in the San Joaquin Valley will become progressively more important and valuable as a source of raw farm commodities. Kings County is under urbanization pressure from Southern California, however, for now, Bakersfield is receiving most of the pressure.

1.8.7 DESCRIPTION OF GENERAL WILDLIFE HABITAT WITHIN THE PLANNING AREA

Historically, the natural vegetation of the Avenal area was characterized by drought-resistant small shrubs, grasses, flowering plants, and trees such as willows and cottonwoods growing along the stream channels. The range of natural vegetation communities has been significantly reduced from historic levels as a result of conversion of these lands to urban and agricultural uses. Only scant disturbed remnants of these natural communities remain in the Avenal area. Agricultural and suburban developments have all but eliminated most historic natural communities.

The agricultural community surrounding the City of Avenal consists of both large and small farms. Tree and row crops dominate the agricultural land uses with pasture and open land.

Although there is no prime habitat in the Study Area, croplands in the area can provide a source of food, water, and shelter to both native and introduced wildlife species. The lack of hedgerows, shelterbelts, windbreaks, and natural vegetation buffers severely limits the habitat value of these man-made environs. In addition, agricultural practices such as herbicide and pesticide application, monocultural cropping, and intensive tillage further reduces the habitat value of these lands.

1.8.8 SPECIAL STATUS SPECIES THAT INHABIT THE AREA

The distribution of wildlife in the Planning Area is somewhat limited, due to urbanization. Typical of small urban communities surrounded by intensive agricultural uses are various forms

of small mammals, including mice, gophers, moles, ground squirrels, jack rabbits, skunks and opossums, together with medium-sized predators such as gray foxes and coyotes. Robins, finches, sparrows, crow, black birds, valley quail, ringneck pheasants and morning doves are representative of avian species common to the region. Predator avian species, including owls and hawks, are also relatively common in this portion of the County.

The local vegetation associations support a variety of wildlife and plant species and subspecies indigenous to California. However, the conversion of native and naturalized plant communities in the State to urban land uses, agriculture, and industrial facilities has significantly reduced available wildlife habitat. As a result of this conversion, several species of both plants and animals have been displaced from California, or their populations have declined significantly. As a result, the California Department of Fish and Game (CDFG) and the United States Fish and Wildlife Service (USFWS) have listed some species as threatened or endangered.

The Southern San Joaquin Valley is an area of significant historical biological diversity. Existing data were reviewed to determine the historic occurrence of special status (i.e. sensitive) species and habitats in the Planning Area, including California Natural Diversity Data Base (CNDDB) reports, literature records, and local environmental documents. Queries of the CNDDB (2004) for the Avenal, La Cima and Garza Peak 7.5-minute quadrangles were reviewed to determine if special status species have been reported to occur in the planning area. Recent occurrences of these species have been recorded for the area. A brief description of these species is provided below:

San Joaquin Pocket Mouse (*Perognathus inornatus inornatus*)

The San Joaquin Pocket Mouse is typically found in grasslands and Blue Oak Savannas. The San Joaquin Pocket Mouse is listed on the Federal list as a Species of Concern and is not on the State list. The last recorded update of the Pocket Mouse was in 1989 approximately seven miles west of Kettleman City in Kings County. Very little information is available on this species.

Burrowing Owl (*Athene cunicularia*)

A small ground-dwelling Owl with a round head and no ear tufts. They have white eyebrows, yellow eyes, and long legs. The Owl is sandy colored on the head, back, and upperparts of the wings and white-to-cream with barring on the breast and belly and a prominent white chin stripe. They have a rounded head, and yellow eyes with white eyebrows. Burrowing Owls are comparatively easy to see because they are often active in daylight, and are surprisingly bold and approachable. The females are usually darker than the males. Burrowing Owls fly with irregular, jerky wingbeats and frequently make long glides, interspersed with rapid wingbeats.

Burrowing Owls are found in open, dry grasslands, agricultural and range lands, and desert habitats often associated with burrowing animals, particularly prairie dogs, ground squirrels and badgers. They can also inhabit grass, forb, and shrub stages of pinyon and ponderosa pine habitats. They commonly perch on fence posts or on top of mounds outside the burrow.

Burrowing Owls feed on a wide variety of prey, changing food habits as location and time of year determine availability. Large arthropods, mainly beetles and grasshoppers, comprise a large portion of their diet. Small mammals, especially mice, rats, gophers, and ground squirrels, are also important food items. Other prey animals include: reptiles and amphibians, scorpions, young cottontail rabbits, bats, and birds, such as sparrows and horned larks.

Burrowing Owls are able to live for at least nine years in the wild and over ten years in captivity. In 2001, a burrow seven miles northeast of Avenal was discovered within the levee bank of the San Luis Canal. Burrowing Owls are listed as a Species of Concern on the Federal list and are not on the state list.

San Joaquin Antelope Squirrel (*Ammospermophilus nelsoni*)

The San Joaquin antelope squirrel is a small ground-dwelling squirrel with tiny rounded ears and relatively short tail and legs. It is light brown in color with a light-colored stripe on each of its sides. The tail is light gray or whitish on the underside and is usually held in a vertical position when sitting or curled over the back when running.

This species inhabits the arid grassland, shrubland, and alkali sink habitats of the San Joaquin Valley and adjacent foothills. The squirrels are active year-round and live in burrows that are either modifications of kangaroo rat burrows or ones the squirrels constructed themselves. They are omnivores whose diets are dependent on food availability. Items consumed include green vegetation, fungi, seeds, and more commonly, insects.

The life span of the antelope squirrel is usually less than one year, however, several individuals have lived in the wild for greater than four years. Loss of habitat due to agriculture, urbanization, and petroleum extraction and the use of rodenticides for ground squirrel control are the primary threats to the survival of the San Joaquin antelope ground squirrels.

San Joaquin antelope squirrels have been seen near Avenal in the Kettleman Hills. They are listed as a Species of Concern on the Federal list and a Threatened species on the State list.

San Joaquin Woollythreads (*Monolopia congdonii*)

An annual herb occurring in chenopod scrub and in sandy substrate in valley and foothill grassland. Found at 60 to 800 meters in elevation. San Joaquin Woollythreads have been found 0.7 miles southwest of the intersection of Shell Road and Interstate 5 on the east side of Shell Road. According to the Natural Diversity Database, grazing is a threat to this herb. San Joaquin Woollythreads are listed as Endangered on the Federal list and are not listed on the state list.

Blunt-nosed Leopard Lizard (*Gambelia sila*)

The Blunt-nosed Leopard Lizard has a blunt nose, short head and round tail. They have Narrow white to yellow crossbars separated by wide gray or brown crossbars containing numerous dark-edged brown spots and their throats are blotched with gray.

Because much of its former habitat in the San Joaquin Valley has been converted to farms and communities, the Bluntnose Leopard Lizard is threatened with extinction. It has shared this fate with other animals of the California grasslands, including the San Joaquin kit fox and the Giant Kangaroo Rat. In addition to agriculture and residential development, mining, oil drilling, road building, and the construction of the water management infrastructure have contributed to the degradation of the once-expansive grassland habitat.

Their habitat includes: sandy areas, alkali flats, canyon floors, and foothills with sparse, open vegetation. The lizards mate from April to June, and two to five eggs are laid in June or July which hatch in August or September.

This lizard usually “freezes” when danger threatens, only to dash for cover if closely approached. Grasshoppers are among its favorite foods. The Blunt-nosed Leopard Lizard is on the U.S. Endangered Species List and is classified as Endangered in California.

San Joaquin kit fox (*Vulpes macrotis mutica*)

The long-tailed San Joaquin kit fox, has an average body length of 20 inches and stands about 12 inches high at the shoulder. Average weight of an adult male is approximately five pounds. The ears are large and densely covered on the inside with stiff, white hairs. The summer coat is light buff to gray on the back and white on the belly; winter coat is grizzled gray on the back, rust to buff on the sides, and white beneath. The tail is distinguished by a prominent black tip.

The San Joaquin kit fox forages in California prairie and Sonoran grasslands in the vicinity of freshwater marshes and alkali sinks, where there is a dense ground cover of tall grasses and San Joaquin saltbush. Before the 1800s, the grasslands of California were second in size only to the Great Plains. Today only one percent of the state’s native grasslands remains. Industry, development, and various types of agriculture (in the forms of row crops, orchards, vineyards, and livestock forage) have taken over many of these lands. Suitable remaining habitats are fragmented, meaning the foxes occur in small and isolated populations.

Tracks, scats and burrows have been noted in the Avenal area. The San Joaquin kit fox is on the U.S. Endangered Species List and is classified as Threatened in California.

California Jewelflower (*Caulanthus californicus*)

The California jewelflower is an annual herb in the mustard family and has flattened, sword-shaped fruits. Its stems are erect, up to about one foot tall, and produces several flowering branches. The leaves are wavy-margined and most are in a basal rosette. Fruit, stem and foliar hair characteristics distinguish this species from other jewelflowers.

Seeds begin to germinate in the fall, and seedlings may continue to emerge for several months. The seedlings develop into rosettes of leaves during winter months, after which stems elongate and flower buds appear in February or March. Translucent white flowers with purple to green tips may continue blooming as late as May if rainfall and temperatures are favorable.

Known populations of California jewelflower occur in nonnative grassland, upper sonoran scrub, and cismontane juniper woodland and scrub communities. Historical records suggest that it also occurred in the valley saltbush scrub community in the past.

Potential threats to remaining populations include competition from nonnative plants, pesticide effects on pollinators, small population size and development on private land. Cattle grazing may be a threat if the grazing occurs between the rosette stage and seed set.

The California jewelflower is listed on the U.S. Endangered Species List and is also listed as Endangered in California.

Lemmon's Jewelflower (*Caulanthus coulteri* var. *lemmonii*)

The habitat associated with Lemmon's Jewelflower consists of pinyon-juniper woodland and valley and foothill grassland. This species has been recorded in Tar Canyon, southwest of Avenal. Lemmon's Jewelflower is listed as a Species of Concern on the Federal list and is not on the State list.

Recurved Larkspur (*Delphinium recurvatum*)

Recurved larkspur has erect reddish to purple stems that range from 8 to 24 inches in height. Stems are slightly hairy below and glabrous in the inflorescence. Leaves are 0.6 to 1.2 inches long, palmatifid into few-parted divisions, and hairy beneath. The inflorescence supports 15-24 flowers which have light blue sepals and cream to white petals. Sepals are oblong-ovate with incurved tips and are sparsely strigulose.

Recurved larkspur grows in subalkaline soils supporting shrubby or grassland habitats of the western Central Valley from Contra Costa County to Kern County and the Carrizo Plain. Co-occurring species include saltbush, brome grass, and wild oats.

Recurved larkspur occurrences are widely scattered throughout Kings County. Records for this species come from the lower slopes of the Kreyenhagen Hills, the Pyramid Hills, the vicinity of Kettleman City, and Avenal Gap. There is an old record from the Guernsey area and a discovered population on the Kings/Tulare County Line just north of Highway 198 and just south of the S.P.R.R. line.

Much of the original habitat of recurved larkspur has been lost to agriculture. Many of the historic populations have either been extirpated or lack current field confirmations of population status. Habitat loss continues to be the principal threat to the continued existence of this species. Recurved Larkspur is listed as a Species of Concern on the Federal list and is not on the State list.

Pale Yellow Layia (*Layia heterotricha*)

Reference Appendix B (California Department of Fish and Game, Natural Diversity Database) for available information on Layia heterotricha.

Showy Madia (*Madia radiata*)

Reference Appendix B (California Department of Fish and Game, Natural Diversity Database) for available information on *Madia radiata*.

1.8.9 CLIMATE AND AIR QUALITY

Climate

The climate of the Avenal area is described as Mediterranean, which is typified by hot, dry summers and mild winters. Temperatures recorded at Lemoore Naval Air Station (LNAS) show the average monthly high temperature for July to be 80.6° F, while the average temperature for January is 45.1° F. It is not uncommon for maximum temperatures to exceed 100 degrees during the summer months; nor for temperatures to drop below freezing in the winter. The highest temperature ever recorded at LNAS was 113° in July of 1975. The lowest temperature of record was 14° in January of 1962.

During the summer, a high pressure ridge develops over the Sierra Nevada blocking the penetration of moist air from the Pacific. This high pressure system tends to weaken during the winter months thereby opening the door to Pacific storms. Approximately 90 percent of all rainfall in Avenal occurs between November and April. Average rainfall measured at Kettleman City is 6.5 inches per year compared to 7.8 inches at Coalinga and 7.6 inches at Lemoore. Avenal's rainfall is probably somewhere between these figures. Rainfall can vary widely from year to year.

Air movement through the San Joaquin Valley is in a southeasterly direction. Wind enters the Valley over the passes east of the San Francisco Bay and exits through mountain passes at the southern end of the San Joaquin Valley, principally Tehachapi. Meteorological data from LNAS indicates that the average wind speed is 4-6 knots with maximum gusts 40-50 knots recorded from October to May. Wind direction records measured between 1967 and 1971, indicate that winds blew out of the northwest quadrant 64 percent of the time. The prevailing wind direction is from the north and north-northwest, except in December and January, when the winds blow from the southeast or east-southeast.

Federal Air Quality Regulations

The Federal Clean Air Act of 1970 (FCAA) was the first major piece of federal air quality regulation. Amended in 1977 and 1990, the Clear Air Act required the U.S. Environmental Protection Agency (EPA) to establish National Ambient Air Quality Standards (NAAQS) for several pollutants. These standards are set by law at levels that protect public health and welfare, with an adequate margin of safety. Areas exceeding the federal standard more than two times per year are designated "non-attainment" areas under the Clean Air Act, and as such are subject to more stringent planning and pollution control requirements.

Under the 1990 amendment to the Clear Air Act, non-attainment areas are divided into five categories depending on future dates identified for meeting the standards. "Marginal" or

“moderate” violators only slightly exceed the NAAQS, whereas “serious,” “severe,” or “extreme” violators exceed the standards by a much higher margin. Marginal areas are required to do little beyond what they are already doing to attain clean air, but areas designated “moderate” through “extreme” must adopt gradually tighter regulations. Areas designated “moderate” or worse for ozone non-attainment are required to show a three percent per year reduction in emissions of volatile organic compounds.

Areas close to meeting Carbon Monoxide (CO) standards are required to start a wintertime oxygenated fuels program and to correct problems with existing vehicle inspection programs. Areas with higher levels of CO must also start an enhanced vehicle inspection program, and those areas with the highest CO levels must adopt transportation measures.

Table 1.8-5 shows emission inventory for the year 2002 in tons per day for Kings County. Carbon Monoxide (CO) is by far the largest category of pollutant in Kings County, and mobile sources account for approximately 84 percent of the 68 tons per day emitted. Area-wide sources such as unpaved road dust account for 92 percent of the PM₁₀.

The FCAA requires an air quality control plan referred to as the State Implementation Plan (SIP). The SIP contains the strategies and control measures California will use to attain the NAAQS. The Federal Clean Air Act Amendments of 1990 require states containing areas that violate the NAAQS to revise their SIPs to incorporate additional control measures to reduce air pollution. The SIP is to be periodically modified to reflect the latest emissions inventories, planning documents, rule and regulations of air basins as reported by the agencies with jurisdiction over them. The EPA reviews SIPs to determine if they conform to the mandates of the FCAA and will achieve air quality goals when implemented. If the EPA determines a SIP to be inadequate, it may prepare a Federal Implementation Plan (FIP) for the non-attainment area and may impose additional control measures.

State Regulations

In 1988, the California Clean Air Act (CCAA) (AB 2595) was passed. The act contains more stringent guidelines for the attainment of air quality goals than the FCAA. The California Air Resource Board (ARB) is the agency responsible for coordination and oversight of state and local air pollution control programs in California and for implementing the CCAA. The CCAA classifies non-attainment areas as moderate, serious, severe, and extreme based on severity of violation of state ambient air quality standards. Both the State of California and the federal government have established a variety of ambient air quality standards. The state 1-hour ozone standard is 0.09 ppm (parts per million, by volume), not to be equaled or exceeded. The federal 1-hour ozone standard is 0.12 ppm, not to be exceeded more than three times in any three-year period.

San Joaquin Valley Air Pollution Control District

The City of Avenal lies within the Kings County portion of the San Joaquin Valley Air Basin (SJVAB). The San Joaquin Valley Air Pollution Control District (SJVAPCD) was organized in 1991 by a Joint Powers Agreement of eight Valley counties (San Joaquin, Stanislaus, Merced, Madera, Fresno, Kings, Tulare and Kern). The District is the local lead agency for formulating Federal and State Air Quality plans, promulgating rules that affect a variety of air pollution sources, and reviewing local governments' land use plans and development proposals in order to estimate projected air quality impacts and suggest methods to reduce those impacts. Headquartered in Fresno with regional offices located in Bakersfield and Modesto, the SJVAPCD has jurisdiction over air quality matters in the San Joaquin Valley Air Basin.

The SJVAPCD has adopted several attainment plans in an attempt to achieve state and federal air quality standards; the adopted *2003 PM₁₀ Plan, San Joaquin Valley Plan to Attain Federal Standards for Particulate Matter 10 Microns and Smaller*, June 2003; the *Carbon Monoxide Redesignation Request and Maintenance Plan for Ten Federal Planning Areas*, (April 1996); and the *Amended 2002 and 2005 Rate of Progress Plan for San Joaquin Valley Ozone*, December 2002. The draft schedule for the *Ozone Attainment Demonstration Plan* is expected to be adopted in 2004.

1.8.10 AIR QUALITY MONITORING DATA

The San Joaquin Valley Air Basin (SJVAB) is classified “severe non-attainment” for the state and federal standard and “serious non-attainment” for PM₁₀ by federal standards. As of February 2004, the EPA is proposing to grant a request by the State of California to voluntarily reclassify, under the Clean Air Act, the San Joaquin Valley Ozone Nonattainment Area from a severe to an extreme one-hour ozone nonattainment area. The Urbanized areas of Fresno, Bakersfield, Stockton, and Modesto are classified attainment and all the non-urbanized areas of the SJVAB are classified as “unclassified” for federal carbon monoxide standards. Air quality in the Planning Area is best represented by air monitoring data collected by the State of California Air Resources Board at the closest monitoring stations to Avenal the Corcoran (Patterson Avenue) monitoring station and Hanford (S. Irwin Street) monitoring station.

Oxides of Nitrogen (NO_x) and Nitrogen Dioxide (NO₂)

NO_x is a family of gaseous nitrogen compounds and are precursors to ozone formation. The major component of NO_x, nitrogen dioxide (NO₂), is a reddish brown gas that is toxic at high concentrations. NO_x results primarily from the combustion of fossil fuels under high temperature and pressure.

Health effects associated with NO_x are an increase in the incidence of chronic bronchitis and lung irritation. Chronic exposure to NO_x may lead to eye and mucus membrane aggravation, along with pulmonary dysfunction. NO_x can cause fading of textile dyes and additives, deterioration of cotton and nylon, and corrosion of metals due to production of particulate nitrates.

Ozone (O₃)

Ozone is a highly reactive secondary gas pollutant which is toxic, colorless and has a pungent odor. Ozone is photochemically produced through complex chemical reactions of certain hydrocarbons and oxides of nitrogen (primary pollutants) in the presence of sunlight and temperatures above 59 degrees Fahrenheit. In high concentrations, ozone and other photochemical oxidants are directly detrimental to humans causing respiratory irritation and possible alterations in the functioning of the lungs and inhibit vegetation growth.

Ozone is a regional air pollutant. It is generated over a large area and is transported and spread by wind. The worst ozone concentrations tend to be found downwind from emission sources in Valley metropolitan areas. Ozone has been the San Joaquin Valley’s most obstinate air quality problem.

Table 1.8-6 shows the number of days the state and federal standard exceeded one-hour and eight-hour ozone concentration for the Hanford (S. Irwin Street) monitoring station. It also shows the maximum concentration in parts per million (ppm). In 2003, the state one-hour standard was exceeded 19 days, the federal eight-hour standard was exceeded 15 times and the federal one-hour standard were not exceeded once. In 2000, the state one-hour standard was exceeded 48 days, the federal eight-hour was exceeded 51 days, and the federal one-hour was not exceeded once.

1999	28	2	25	0.140	0.111

Source: California Air Resources Board. Ozone Trends Summary

**The number of exceedance days equals the number of distinct days on which the relevant standard was exceeded at any monitoring site in the region. If the standard was exceeded at more than one site on a given day, it only counts as one exceedance day for the broader region.

Particulate Matter (PM₁₀)

PM₁₀ refers to particulate matter equal to or less than ten microns in diameter. This material, as opposed to dust, cannot be adequately filtered by the human respiratory system. Inhaled atmospheric particulates can, therefore, be harmful to humans by directly causing injuries to the respiratory tract and lungs or by the reactive gases which were absorbed by the inhaled particulates. Suspended particulates scatter and absorb sunlight, producing haze and reducing visibility. In areas close to major sources including industrial and agriculture operations, PM₁₀ are generally higher in the winter when more fuel is burned and meteorological conditions favor buildup of directly emitted contaminants.

The actual composition of PM₁₀ varies greatly with time and location. It depends on the sources of the material and meteorological conditions. Primary man-made sources of PM₁₀ in the San Joaquin Valley are agricultural operations, agricultural burning, demolition and construction activities, entrainment of dust by motor vehicles on paved and unpaved roads, and residential wood burning. Wind erosion of agricultural land also represents a significant source of air borne dust in the Valley.

Based on air quality data for 2003 at the Corcoran (Patterson Avenue) monitoring station (reference Table 1.8-7), PM₁₀ pollutants exceeded state standards 162.5 days and did not exceed federal standards. Note however, because PM₁₀ is monitored only once every six days rather than continuously, actual exceedences of the standards on a daily basis may be up to six times higher than the numbers shown. In 2002, the state standard for PM₁₀ was exceeded 165 days and the Federal standard was not exceeded once.

Notes: All concentrations expressed in micrograms per cubic meter.

State and National Exceedences Shown in Bold. An exceedance is not necessarily a violation.

No standard violations were observed in Kings County for nitrogen dioxide from 2001 to 2003.

1.9 Safety

1.9.1 IDENTIFICATION OF GEOLOGIC AND SEISMIC HAZARDS

The San Joaquin Valley is a geologic structural trough with its axis oriented northwest-southwest. The valley is bounded to the east by the granitic and metamorphic rocks of the Sierra Nevada, and to the west by the folded and faulted sedimentary, volcanic, and metamorphic rocks of the Coast Ranges. The crystalline rocks of the Sierra Nevada extend westward beneath the valley. These rocks are overlain by a westward-thickening wedge of marine and continental deposits about 10,000 feet thick in the Avenal area. The marine deposits are siltstone, shale, and sandstones. The thicker continental sediments overlie the marine deposits. These consist of unconsolidated alluvium, lacustrine, and flood plain sediments derived from the Sierra Nevada.

Earthquakes originate as movement or slippage occurring along an active fault. These movements generate shock waves that result in ground shaking. Structures of all types, if not designed or constructed to withstand ground shaking, may suffer severe damage or collapse. Likewise, some slopes will collapse due to the soil or geological characteristics resulting in hazard both in terms of collapse of structures located thereon, or collapse of structures within the path of resulting land slides.

Avenal lies within a seismically active area. An earthquake measuring 6.7 on the Richter scale (Rs) occurred in the Coalinga area in 1983, while a quake of 5.5 on the Rs occurred in the Avenal area in 1985. This quake had its epicenter five miles northeast of Avenal in the Kettleman Hills. This quake caused widespread cracks in buildings and pavement and broke numerous windows. Structural failures did not result from this event.

Seven potentially active faults are located within 70 miles of Avenal, including a thrust fault lying 6-8 miles below the central axis of the Kettleman Hills anticline. This thrust fault appears to have caused the Coalinga and Avenal earthquakes.

A study prepared by Golder Associates for the Chemical Waste Management, Kettleman Hills facility, determined that the thrust fault in the Kettleman Hills poses the greatest seismic threat to the area. Maximum credible earthquakes (MCE's) from this fault have been predicted to range from 6.5 to 7.0 on the Richter scale. Peak ground accelerations at the Chem Waste facility, located approximately seven miles southeast of Avenal, are predicted to be .43 gravities (g). This figure represents the maximum force of ground motion caused by a MCE. A probabilistic assessment of ground acceleration determined that the peak acceleration of .43g had a two percent chance of being exceeded in a 20-year period and a five percent chance of being exceeded within a 50-year period. This assessment also determined that, within a 50-year period, there is a 50 percent probability of ground accelerations exceeding .16g and a ten percent chance of accelerations exceeding .34g. These figures should be used in building design criteria to prevent structural failure from groundshaking.

The San Andreas Fault, located approximately 15 miles southwest of Avenal, also poses significant seismic risk. The Slack Canyon – Highway 58 segment of this fault is capable of producing an MCE with a magnitude of 7.2 at a recurrence interval of 140 years. The Slack Canyon – Cholame segment is very active and can produce an MCE with a magnitude of 6.3 at a recurrence interval of 22 years. Ground acceleration from earthquakes occurring along the San Andreas Fault are not predicted to exceed .21g at the Chem Waste Facility.

The Five Counties Seismic Safety Element places Avenal within the C1 Seismic Zone, characterized by firm to hard sedimentary rocks. Primary hazards due to groundshaking are “moderate” to “high” because of the proximity to the San Andreas Fault. Landslides are the only significant secondary seismic hazard. They pose a “moderate” to “high” threat for development located on steeply sloping topography. The Seismic Safety Element recommends that the Uniform Building Code, Zone III building standards be required for all structures and that a 2x factor be used for public structures.

New buildings in Avenal are constructed to prevent loss of life as a result of an earthquake. Older buildings, however, especially un-reinforced masonry buildings could collapse causing injury and loss of life. According to a report in 1979 to the California Seismic Safety Committee, a building should be considered hazardous to life in the event of an earthquake if the building:

- A. Was constructed prior to the adoption and enforcement of local building codes requiring the earthquake resistant design of buildings;
- B. Is constructed of un-reinforced masonry;
- C. Lacks an effective system for resisting lateral forces; and
- D. Exhibits any one of the following characteristics:
 - 1. Has exterior parapets and ornamentation that may fall on a public way;
 - 2. Is constructed of un-reinforced masonry;

3. Has exterior walls of un-reinforced masonry that are not anchored to the floors or roof;
4. Has sheathing or roofs that is not capable of withstanding lateral loads or uniformly transferring horizontal loads to walls; or
5. Has large openings in walls that may result in damage due to torsional (twisting) forces.

In order to eliminate these problems, reconstruction is necessary to at least provide for the adequacy of: (a) un-reinforced masonry bearing walls, (b) the anchorage of exterior parapets and ornamentation, (c) the anchorage of un-reinforced bearing walls to the floors and roof, (d) floor and roof diaphragms, and (e) the development of a complete bracing system to resist horizontal wind and earthquake forces.

Enforcing the retrofitting of buildings to meet earthquake standards is a difficult task. First, Avenal would have to commit staff to the project. In addition to being costly, this would require a policy decision on the part of the City Council that the potential problems were of such dimensions that the cost, both to the City and to the landowner, is warranted. Second, the cost to the property owner might be prohibitive, at the very least causing construction impacts on the existing tenants, possibly relocation and rent increase. The report referenced above stated that it was unlikely that building owners could feasibly afford the cost of making the necessary improvements and that some sort of grant funds would be needed.

Aside from structural damage, earthquake activity can produce three other types of adverse effects. The first is ground failure, which itself is a factor in making some lands unsuitable for development. The area in and around Avenal is composed of geological formations susceptible to such failure. The second adverse effect would be from a seiche (an earthquake induced wave in a lake, reservoir, or harbor). As stated earlier, there are no bodies of water within the Avenal Planning Area large enough to be subject to a seiche.

The third effect would be caused by damage to a dam that results in dam failure. There are a number of dams on upper reaches of rivers that traverse the County that could produce flooding should they fail. There are requirements that the owners of dams prepare maps showing areas that would be flooded should a dam fail. Dam failure inundation maps are available for these dams. These maps indicate that the City of Avenal would not flood if these dams failed. Areas in the northern part of the County would be affected if Pine Flat/Terminus Dam failed. Information regarding the depth of the water should flooding occur is no longer available. It is the policy of the Corps not to list depths since such a calculation depends on too many variables (amount of water stored, location of the failure, extent of the failure, etc.).

1.9.2 IDENTIFICATION OF STRUCTURAL HAZARDS AND CRITICAL FACILITIES

Critical facilities include: underground utilities, schools, hospitals, transportation systems, etc. There are active faults in the Avenal vicinity which could result in strong ground shaking in the event of an earthquake. Impacts to critical facilities by seismic events therefore could be significant.

A critical facilities analysis would be helpful in determining the vulnerability of individual facilities in the community. The analysis would include an inventory of critical facilities, the hazard risks associated with the critical facilities and a vulnerability assessment based on the various hazards.

1.9.3 WILDLAND AND URBAN FIRE HAZARDS

Both structural and wildland fire hazards threaten life and property within the Avenal vicinity. Wildland fires resulting from both man-made and natural causes can occur in brush, or grasslands, primarily in sparsely developed or existing open space lands. Structures and urban development may also be threatened or destroyed in the area of wildland fires. Structural fires usually result from man-made causes and threaten industrial, residential and commercial structures, especially those built before building and fire codes were established. These substandard structures represent the highest potential for injury, death, or loss of property.

1.9.4 AREAS SUBJECT TO FLOODING AND DAM FAILURE INUNDATION

Portions of Avenal are within the 100-year floodplain as identified by the Federal Emergency Management Agency (FEMA) on their Flood Insurance Rate Map (reference Figure 1.9-1).

During major storm events several arroyos upstream from Avenal are subject to flash flooding. Numerous accounts of flooding along Santa Clara Street below Arroyo Esquinado have been reported by Avenal residents. Arroyo del Camino is identified as a flood hazard on the FEMA flood insurance rate maps. This flooding, however, may be attributable to poorly maintained culverts and drainage ditches.

At least ten distinct watersheds drain into the urbanized portion of Avenal. These drainages flow through or near the City of Avenal and onto the Kettleman Plain. A 1979 study of the drainage problem by McKee-Zumwalt and Associates calculated the potential runoff from these watercourses during a 10-year and a 100-year storm event. The findings of this study are listed in Table 1.9-1. The drainage of Camino Esquinado poses the greatest flood threat to the City. This watershed is capable of producing flows of 102 cfs during a 10-year storm and 155 cfs during a 100-year event.

**Table 1.9-1
Watershed Data**

Drainage Unit	Drainage Area	Peak Flows	
		10-Year Storm	100-Year Storm
#1	306 ac	N/A	N/A
#2	148 ac	N/A	N/A
#3	265 ac	N/A	N/A
#4	436 ac	97 cfs	149 cfs

#10	69 ac	22 cfs	35 cfs
#11	577 ac	87 cfs	126 cfs

Source: McKee-Zumwalt, 1979

As stated earlier, the City of Avenal would not flood if the Pine Flat Dam and Terminus Dam failed. However, areas in northern Kings County would be affected.

1.10 Noise

1.10.1 INTRODUCTION

The principal noise sources in the City of Avenal are traffic on State Route 269 and on local roads. The other existing noise source is the Avenal Regional Landfill. The existing noise environment in the City of Avenal was determined by a combination of noise level measurements and noise modeling. Following is a discussion of the background noise level survey results in residential areas of the City, and a description of the studied noise sources in the City.

1.10.2 BACKGROUND NOISE LEVEL SURVEY

The purpose of the background noise level survey was to determine the baseline noise environment in those parts of the City that are removed from obvious noise sources. Three residences were selected for the survey. Their locations are shown in Figure 1.10-1. Noise measurements were conducted continuously for 24 hours using unattended sound level analyzers. The results of the monitoring are shown in Figures 1.10-2 through 1.10-4.

The background noise levels in terms of the Day/Night Average Level (L_{dn}) at the three residences ranged from approximately 51 to 59 dB. These noise levels are fairly typical of small communities, which generally have background noise levels near the range of 55 to 60 dB L_{dn} .

In Figures 1.10-2 through 1.10-4 the L_{max} represents the highest (maximum) instantaneous noise level occurring during an hour. The L_{50} and L_{90} values are the noise levels exceeded for 50% and 90% of the time during an hour respectively, and the L_{eq} is the energy equivalent or average noise level during the hour.

1.10.3 MAJOR STATIONARY NOISE SOURCES

The production of noise is an inherent part of many industrial, commercial and agricultural processes, even when the best available noise control technology is applied. Noise production within industrial or commercial facilities is controlled indirectly by Federal and State employee health and safety regulations (OHSA and Cal-OSHA), but exterior noise emissions from such operations have the potential to exceed locally acceptable standards at nearby noise-sensitive land uses.

MEASURED HOURLY NOISE LEVELS

MEASURED HOURLY NOISE LEVELS

Figure
1.10-4

Site 3 - 1044 Yosemite
April 13-14, 2004

Ldn = 51.0 dB

▲ Lmax □ Leq
 ▲ L90 × L50

The following discussion provides generalized information concerning the relative noise impacts of the one major industrial noise source in the City of Avenal currently in operation. Other industries or other major noise sources may exist. Worst case 50 and 55 dBA hourly L_{eq} noise contours were prepared for the major stationary noise source. These contours are included in Figure 1.10-5 of this document. The property located east and northeast of the landfill is zoned as a nature preserve and a scenic corridor. The generalized contours contained within Figure 1.10-5 should be used as a screening device to determine when potential noise-related land use conflicts may occur, and when site-specific studies may be required to properly evaluate noise at a given noise-sensitive receiver location.

Avenal Regional Landfill:

This landfill facility is located at the intersection of Skyline Boulevard and Hydril Road. During the visit to the site there was no noise being emitted from landfill operations. The landfill's hours of operations are:

Monday through Friday – 7:00 a.m. to 5:00 p.m.

Saturday – 7:00 a.m. to 4:00 p.m.

Sunday – closed

The noise sources noted at the plant were a trash compactor, bulldozer, water truck, scraper, and trucks that operate to/from the facility. The plant employee interviewed stated that the trash compactor typically operates 4 to 5 hours per day and that either the bulldozer or compactor are operated one at a time. All of the motorized equipment (vehicles) on the site have back-up beepers. There are approximately 30-40 trucks that operate daily to/from the site during the hours of operation. The predominant noise source on the site appeared to be the back-up beepers.

Noise measurements were taken on site while the compactor was being operated. The measured noise levels at a distance of 50 feet were:

80 dBA L_{eq} - Compactor moving forward no load

84 dBA L_{eq} - Compactor moving forward pushing dirt

85 dBA L_{eq} - Compactor backing up with beeper

Site topography provides acoustical shielding between the landfill operations and the nearest noise-sensitive receivers. Therefore, a -10 dB offset was used during modeling to account for the natural attenuation.

**AVENAL REGIONAL LANDFILL
WORST CASE 50 AND 55 DBA LEQ NOISE CONTOURS**

Figure
1.10-5

Traffic Noise:

Traffic noise exposure was calculated using the Federal Highway Administration Highway Traffic Noise Model (FHWA Model). The FHWA Model is the analytical method currently favored by most state and local agencies, including Caltrans, for highway traffic noise prediction. The Model is based upon reference energy emission levels for automobiles, medium trucks (2 axles) and heavy trucks (3 or more axles), with consideration given to vehicle volume, speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the site. The FHWA Model was developed to predict hourly L_{eq} values for free-flowing traffic conditions, and is generally considered to be accurate within ± 1.5 dB. The Model assumes a clear view of traffic with no shielding at the receiver location.

To predict L_{dn} values, it is necessary to determine the hourly distribution of traffic for a typical day and adjust the traffic volume input data to yield an equivalent hourly traffic volume. The Calveno traffic noise emission curves were used as recommended by Caltrans to more accurately calculate noise levels generated by California traffic.

The CALTRANS Traffic and Vehicle Data Systems Unit provided the existing traffic conditions used in FHWA Model preparation. Truck traffic volumes were also obtained from the Traffic and Vehicle Data Systems Unit. Existing traffic noise levels were calculated for State Route 269 and Route 33 at three locations in the City of Avenal. The Avenal Cutoff Road, which leads from Interstate 5 into the City, and the Avenal Junction with Route 33 carry the majority of traffic within Avenal. Traffic at the Avenal junction with Route 33 carries commuter traffic to/from the Avenal State Prison. Table 1.10-1 shows the traffic data used in the Model. Table 1.10-2 shows existing traffic noise level contours in tabular form. Figure 1.10-6 shows the approximate location of the 60 dB L_{dn} traffic noise contours graphically.

Table 1.10-1
FHWA Highway Traffic Noise Prediction Model Inputs
Existing Traffic

Location	ADT	Day/Night %	% Medium Trucks	% Heavy Trucks	Speed (mph)
SR269 at the I-5 Avenal Cutoff Road	4,900	85	7	3	45
SR 269 at the Route 33 Junction	4,200	85	4.6	3.4	35
Route 33 at 7 th Street	4,400	85	6	2	45

*Acoustically "soft" site assumed.

Table 1-10.2
Existing Traffic Noise Levels And Contours
Existing Traffic

Location	Predicted L_{dn} , dB (at 50 feet)	Distance to Noise Contour (feet)*	
		60 dB L_{dn}	65 dB L_{dn}
SR269 at the I-5 Avenal Cutoff Road	65.9	124	57
SR 269 at the Route 33 Junction	63.0	79	37
Route 33 at 7 th Street	64.9	105	49

*Distance is measured from the centerline of the roadway.

In general, existing traffic noise levels on local roadways through Avenal range from about 60-65 dB L_{dn} at the nearest receivers on most roadways. Along Route 269, existing noise levels are about 63-66 dB L_{dn} at the nearest receivers. Along Route 33, existing noise levels are about 65 dB L_{dn} . Traffic noise levels that are 60 dB L_{dn} or less usually are considered to be fully compatible with noise-sensitive uses, which include residences, schools, churches and hospitals. Levels between 60 and 70 dB L_{dn} are marginally acceptable, and levels over 70 dB L_{dn} usually are considered to be unacceptable.

1.11 Issues, Opportunities, and Constraints

In its broadest context, the General Plan is a way of problem solving; it is a process for making informed decisions about a community's future and establishing priorities and action plans to achieve development objectives. For example, a City may choose to fund parks rather than streets because of the need for more open space, or it may construct an improved water system rather than building a new fire station, or vice versa. It may decide to grow to the north, south or both. As an exercise in community involvement and an examination of a city's resources, the General Plan update is an attempt to foresee the consequences of possible courses of action and select the best one.

This General Plan update process has so far included several important steps to identify local preferences. Visioning workshops have been conducted and public and civic leaders have expressed their opinions about the City and its growth issues, opportunities, and constraints. Planning Commission and City Council General Plan Advisory Committee meetings have been held to discuss existing conditions, community visioning, development alternatives, comments and expectations about the General Plan process.

The planning principles are summarized as follows:

- Avenal's friendly, small town atmosphere should be preserved by ensuring diverse, appropriate scale retail services; citizen participation in decision making; quality of public schools and adequacy of public services.
- Additional services and facilities should be planned so that Avenal provides a full range of medical, office, retail, convenience and entertainment services that are needed by residents.
- The role of the downtown as a focal point for the community should be preserved. Adequate expansion area should be planned so that it will grow in proportion to the rest of the community. Sites for more retail, entertainment, specialty stores and medical services should be identified.
- The commercial opportunities afforded by Skyline Boulevard should be capitalized on.
- Development in the community should be compact and contiguous to existing developed areas. New development areas should "square off" existing developed areas.
- The City's Sphere of Influence and growth policies should ensure that the community is physically distinct from other communities and contains an agricultural buffer area.
- Traffic conflicts should be resolved, including connectivity between neighborhoods, access to industrial areas, and critical intersections. Growth should be allocated with accessibility constraints in mind.
- Local streets and minor collector streets should be used to provide connectivity between neighborhoods while limiting cross-town trips through neighborhoods. Collector and local roads should be designed to provide good, safe connectivity between neighborhoods, services and facilities.
- The City shall encourage the development of more organized sports areas with easy access to those areas.
- Enhance Avenal's physical diversity, visual qualities and small-town characteristics through stricter landscaping and building standards and design review.
- The Industrial area north of Interstate 5 will be actively marketed for new industries, have sites which are functional, have adequate public services and adequate access to I-5 and Highway 269.

Re: Cultural Resources Records Search for the Avenal General Plan Update Draft Background Report, for land in various sections of the Avenal, Garza Peak, La Cima, and Kettleman Plain, CA, 7.5' USGS Topographic Quadrangles, on behalf of the City of Avenal, Kings County

Dear Mr. Alcorn:

Per your request, a cultural resources records search (RS No. 04-097; CAR Project No. 04-13) was conducted for the above-referenced project on March 24, 2004, at the Southern San Joaquin Valley Historical Resources Information Center at California State University, Bakersfield, by myself. The purpose of this records search is for the City of Avenal to develop the Avenal General Plan Update Background Report.

The results of the records search indicate that 14 cultural resource studies have been conducted directly on (and around) portions of the subject project area (title pages enclosed). None of these studies reported any cultural resources on or within a half mile of the project area. As the map I received with your request only provided approximate boundaries for the project, those boundaries are approximate for the records search as well. I have included a small-scale map of the project area based on my determination of the boundaries, as well as large-scale topo maps showing all of the cultural studies that have taken place in and around the project area (the cultural studies are highlighted in yellow and the project area boundaries are highlighted in orange). Of necessity, there is some overlap on these maps, but you will be able to tell by the KI numbers where studies are duplicated on more than one map. I attempted to cut and paste it all into one map, but the scale was too small to be able to see the details.

There are no known cultural resources within the subject properties or within a half-mile radius that are listed in the *National Register of Historic Places*, the *California Register of Historical Resources*, *California Points of Interest*, *California Inventory of Historic Resources*, or the *California State Historic Landmarks*.

As noted above, there are no recorded cultural resources within the subject properties, and it is not known if resources exist there. In addition, while previous surveys on or within about a half mile of the project area reported no cultural materials, an absence of data does not necessarily indicate negative data. As such, the possibility remains that resources exist there, and as such, further investigation may be warranted.

The invoice for this records search will follow shortly. If you have any further questions or concerns, please feel free to contact me at 661-664-3297 or by email at jgardner4@csu.edu.

Sincerely,

Jill K. Gardner
Assistant Director
